1.—PROCEDURE.—The iutending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller, stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we bear from *both* parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has *not* been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or, if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

PREPAID ADVERTISEMENTS

UNDISPLAYED.—Three Words a Penny up to eighteen words, MINIMUM Fourpence. One Halfpenny per Word for each word over eighteen.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and, after the first eighteen words, are charged at two words a penny.

Headlines or Footlines 6d., 9d., 1/-, 1/6, according to size.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL. Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London. Terms for Display Advertisements on application.

HENRY TAMS, Warren St., Longton, Staff.

DO NOT WAIT

until your young Birds are ready for more room; be prepared, and get Flight, Moulting, or ANY OTHER CAGE you may require, from W. RUDD.

All Mule Breeders should see his **Combination and Flight** Cages. Three partitions with Two Fronts, hence can instantly be made from a Three-Compartment Cage to a long Flight Cage. See Illustration in **Free Catalogue.**

W. RUDD also supplies Egg and Bread Mills in three sizes; latest improved Queek Roller Machines, Colour Foods, and every article mentionable for the Birdroom and Aviary. That they are the best and cheapest in the market the following should prove:—

Never So Nice—So Cheap—So Well Fitted.

Greenlade, Blackawton, April 26th.—I received the breeding cage quite safely. I have bought cages of many sorts during the many years I have kept birds, and I can truthfully say that I never had one so cheap, so nice, and so well fitted in every way. The other things also are capital, and nothing was broken. I hope I shall have dealings with you again.—K. Friend to W. Rudd.

11, Rock View, Westbourne-rd., Torquay, April 24th, 1907.—Enclosed find P.O. for ——. Highly pleased with the last lot of goods.—S. A. Peeke to W. Rudd.

47, Monk-rd., Exeter, April 16th, 1907.—The cage, etc., arrived safely, and I am very pleased with it.—E. Cox to W. Rudd.

Delighted, etc.

85, Jillery-st., Abertillery, Mon., April 22nd, 1907.—The cage arrived quite safe, and am delighted with it; also goods.—Wm. Swannack to W. Rudd.

CHARPIE! CHARPIE!! The German and French Nesting Material, prevents sweating, etc. A large consignment of the genuine article (beware of low priced, nasty substitutes) **direct from Germany,** all hand-picked. Samples **3d.,** post free.

W. RUDD, THE **Bird Specialist,** **NORWICH.**

SANDIFORD'S FAMOUS ROYAL RED

TEN TONS on view for anyone to see.

The only Colour Feed on Earth.

Mr. E. Godley Rishton, April, 1907.—"Sir,—You must save me 56 lbs. Royal Red. I never had such a hot colour before last season. It was splendid, as proved by my wins at all leading shows, which were: 77 1sts, 68 2nds, 55 3rds, 42 4ths, 43 vhc's, 34 hc's, 102 specials." Mr. E. Baker, Cowes.—"Sir,—Once more I have the pleasure of congratulating you on the success of Royal Red. I fed all my birds entirely on your feed. My clear yellow, which won cup and medal for hottest bird was red hot. At the Palace I won three 1sts, one 2nd, two 3rds, etc., four specials, for best Norwich. In such company I think it speaks volumes. Also was very successful at Plymouth, Portsmouth, Dulwich and Peckham, L.C.B.A., Newport, Bournemouth, Camberwell Baths, etc. Send me 1 cwt. of your new feed." Mr. W. R. Miles, Chichester (another big Palace winner), April, 1907. "Sir,—Send 30 lbs. Royal Red, 7 lbs. hot, 1 cwt. Spanish canary." Mr. H. W. Battye, Huddersfield.—"Sir,—Send me 56 lbs. Royal Red. Last season's were splendid." Mr. J. Howard, Norwich, April, 1907.—"Sir,—Send 2 cwt. Royal Red, 28 lbs. hot, to start with. They never saw such colour as last year in Norwich." Mr. A. G. Davis, Manchester, April, 1907.—"Send 112 lbs. Royal Red, 14 lbs. hot Natal." Also was used with great success last season by Mr. W. Dormer, S. Cook, winner of the N.P.C. Challenge Cup for 1907, J. H. Barnes, W. Collings, W. Morris, W. Vardy, T. H. Veale, W. R. Miles, A. G. Cameron, Beardall, Fox, Irons, Towers, J. Howard, J. T. Bishop, Hayhurst, Hirst, T. W. Heaton, A. G. Davis, W. Booth, J. Wilcock, Halliday, Cuthbertson, R. Sutcliffe and Son, Mallinson and Son, R. L. Crisp, Ambler, Cooper, Wootton, A. Brown, Hill and Stewart, etc. I could fill this paper with successful exhibitors who fed on our feeds last season. Send stamp for samples and testimonials, if above does not satisfy you as to whose colour feed to use, nothing will.

BOOKS.

THE HYGIENE OF BIRD KEEPING.
By W. GEO. CRESWELL, M.D., L.R.C.P., F.Z.S.
Price 1/1, post free from CAGE BIRDS Offices,
154, FLEET STREET, LONDON, E.C
OPINIONS OF THE PRESS.
LANCET: "This little book will be welcomed by all lovers of birds, whether ornithologists, aviculturists, or the owners of a single pet songster. The author deals with his subject in a thoroughly practical and scientific manner, and the results of his experiments prove the fallacy of some rule-of-thumb theories. . . . The book is well illustrated."
COUNTRY LIFE: " . . . a surprising amount of really valuable advice for all who keep small birds, whether in cages or aviaries. . . . Those who approach the subject with an open mind must admit the cogency of the author's arguments; and these, backed by a very wide experience at first hand, will prove hard nuts to crack for many of the champions of the 'good old methods.' . . . We venture to think that his experience will pave the way for a revolution in the methods of bird keeping in the near future."

LINNET singers, Mule breeders.—Exhibitors, if you want a bird, now is your chance. I have 100 large cock Brown Linnets, caught since February, singing, 1/-, 1/6, 2/- each; money returned if uot satisfied Buy direct from catcher.—Matthews, 37, Myrtle-st., Cheadle Heath, Stockport, Cheshire.

MR. GEO. COOPER, Judge, Norwich, 40 years specialist British birds. Private collection, 20 Linnet cocks, selected personally Scotland, September, champion size, markings, song, show, muling, 2/- each; 30 Siberian giant Mealy Redpolls, 1/6, 2/6, 3/6, 5/-, according size. Purple-capped show Bramblefinch cocks, colour, markings, big bodies, 2/6, 2/-, 1/6, cages 3d.—Cooper, Judge, Norwich.

NOTICE.—All birds sent on approval, cash or deposit. If not giving fullest satisfaction, you return them, and have your money back in full, as I do not wish you to keep them. I claim to have finest stock in West England, and in grand song before sent out, not fresh-caught rubbish same most dealers send. Cock Brown Linnets, with nut-brown backs, white in wing, running up to quill, 1/- each, three 2/6, six 4/-, 8/- dozen. Notice, I have imported 100 Siberian Linnets, fit to show, and win, plenty size and markings, 2/6, 3/6 each. Cock Goldfinch, house moulted, guaranteed Mule breeder, 5/6, 7/6; Sib-bred hen Canary, mother ten Mules last season, 3/6, 8/6 pair; cock Goldfinch Mule, pure note, 7/6; cock Bramblefinch, fit to win, 1/6. House moulted Linnets, red-breasted, one stone-breasted, 1/6, three 4/-, six 7/6. Selected by me for Linnet singing contest, same as I have supplied at Hull, Coventry, Newcastle-on-Tyne, Birkenhead, Durham. Seven days' approval. Open Linnets' singing cages, 8d. Talking Parrot, amusing pet, 30/-, worth £5.—Baker, Herbert-st., Bedminster.

PRESTON LINNET FANCIERS.

An All England Contest will take place at the Cherry Tree Inn, Lancaster-rd., on May 11th, 1907, when prizes consisting of splendid cup, given by Mr. Sandiford, and five other valuable prizes will be competed for; entrance, 1/- per bird.—Secretary, J. Hindle, 35, Lancaster rd., Preston.

STOP!—Look at this, it will interest you. You want good sound healthy reliable birds. I can send you them at reasonable prices. My stock of selected red-breasted singing Linnets is undoubtedly the largest in England (no Foreign sickly rubbish here). Over 1,000 sound healthy birds to select from. Cock Linnets, 1/- each, 3 for 2/6, 6 for 4/6, 12 for 8/-, 24 for 15/-; extra large birds, for show or muling, 1/6, 2/-, 2/6 each. Note the dates, and what my customers say:—"The Stables, April 27th, 1907. Buckingham, Bucks.—The Linnet you sent me is a grand specimen, and excellent songster. I am highly satisfied.—G. Basford to Miss Storey."—"4, School-st., Coatbridge. April 26th, 1907.—Bird arrived safe. I am highly pleased with it. I could not wish for a better.—A. Kirkland to Miss Storey." —"Denaby Dale, Huddersfield. April 27th, 1907.—Received Linnet this morning. Am perfectly satisfied with it. I can recommend your birds to all my friends.—H. Ellis to Miss Storey."—"Reigham Cottage, Alnwick. April 26th, 1907.—Linnets arrived in pink of health, and give every satisfaction. Thanking you for your honest dealing.—R. Arkle to Miss Storey."—"21, Billet-rd., Walthamstow. April 27th, 1907.—I am more than satisfied with the bird you sent me. I consider it worth a lot more money than I paid for it. Your honest way of dealing is a credit to the fancier. It is my duty to recommend you to all my friends.—R. Davison to Miss Storey."—Do not be gulled with rubbishy birds. Let me send you the birds you require on seven days' approval, at my risk; illustrated price list post free.—Miss E. L. Storey, Practical Bird Specialist, Crowle, Doncaster.

MATTHEWS, LINNET KING.

To Linnet singers and Mule breeders.—My Linnets have stood for the last five years, and I have sent them all over England for contest singing and Mule breeding, and they are acknowledged the keenest songsters you can get now. Birds I have sent out are winning for their owners in showing and contest singing. If you want a real good bird, try one of mine. They are all good, large, healthy birds, and are sent on approval at my own risk. I have the largest stock of singing Linnets in England. Some real good Linnets, in full song, been taught under my well-known champions, been caged since November, very steady, real bargains, 2/6, and special birds, 3/-. I have also the finest lot ever seen, all guaranteed ready for Mule breeding, good large healthy Linnets, good nut-brown backs, blood-red breasts, blue beaks, in full wild song, real bargains, 2/6 each. Those intending Mule breeding should send at once for one of these special birds, also a sample of my special mixed seed and instructions how to feed, sent free with every order. I have a few special jonque Linnets for light muling, 3/- each. My special Linnet mixture, sold at four packets a 1/-, and my special wild seed mixture, four packets 1/-; no Linnet fancier should be without it, as it is the best you can possibly get to keep your birds in condition and song. Gentlemen, read what others say about my Linnets:—"21, Mitchell-st., Plunk-lane, Leigh. Sir,—I enclose P.O. for Linnet I received from you, and I am well satisfied with it. I have had a big Linnet judge to see it; this man sends Linnets all over England for contest singing, and he says I have got a real good bird. Wishing you every success.—From J. Lancaster to Matthews, Birdcatcher." "26, Burnaby-st., Longsett-rd., Sheffield. Sir,—Birds arrived safe, and I am more than pleased with them. They are grand birds, and I don't know how you can sell them at the price. Wishing you every success.—W. Clarke to Matthews, Birdcatcher." Gentlemen, my prices are working men's prices, and I send all birds out on four days' approval at my own risk. Over 200 in stock. No delay; birds sent day after order. Buy from the catcher. Cash or deposit.—Matthews, Birdcatcher, 44, George-st., Hyde, Cheshire.

HARRY ALLEN.

Champion of all Champions. First, second, and third last week; first and second this week; and no wonder I win all before me with the kind of birds I keep and send out. I thoroughly understand the Linnet; thereby I am able to satisfy all my customers. I have customers who have bought off me this last twenty years. Big, fine, healthy cock Linnets, good nut-brown, black beaks, and shows white on wing, well pencilled, 2/6 and 3/- each; extra picked birds, sure mulers, 3/6 each. Remember, I still hold the record for Mule breeding (62 Mules bred by three of the above kind by Sergeant Smith). Cock Linnets, singing beautifully in a polished singing contest cage, with a packet of my special mixture and instructions how to feed, 4/6 the lot Young house moulted Linnets, singing hard and mad proud, 7/6, 8/6, 10/6, with cage. I defy any dealer to sell birds like them at the money; they will sing anywhere, finger tame, and every bird fit for show. I have one extraordinarily good one, price 15/6, fit for any gentleman to look at Four packets of my special mixture, 1/-. Contest cages, 1/- and 1/6 each. Send stamped envelope for particulars of my book on Linnets, which tells you how to make them sing at one another. "Little Holme-st., Todmorden. Sir,—Received the cages and seed all right. With thanks.—Barker, to H. Allen." "Carhrook-st., Sheffield. Sir,—I was greatly pleased with your book of secrets, etc.—T. Baker to H. Allen." "Regent-pl., Cambuslang, Lanarkshire. Sir,—I received bird in splendid condition. Thanks for prompt despatch. Will probably want a few more.—A. White, to H. Allen." "10, Telford-st., Inverness. Sir,—I received Linnet all right. Thanking you for same. It began singing five minutes after it arrived, and singing ever since.—J. Johnstone, to H. Allen." Everybody is welcome to come and hear my champions, and see hundreds of testimonials. I have sold thousands of Linnets yearly for this last twenty years in Leeds Market alone. All my birds are on seven days' approval, cash or deposit. Only honest dealing done here. See last week's advertisement, why I don't advertise as the Linnet King. Send to the original Linnet firm, and you will never regret it. Beware of imitations.—Harry Allen, 42, Brown Hill-cres., Harehills-lane, Leeds.

FOR ONE MOMENT

Just consider what it means to you when selecting birds for your breeding stock. It matters not if you be an experienced breeder and exhibitor, or only an amateur, all have, or should have, one desire—to get the best possible birds at the most reasonable prices. If you have this desire I would remind you that Miss Storey has the best collection of birds in England, birds of the proper type in breeding condition, at reasonable prices. Do not be misled with unshapely rubbish, when you can have the very birds you require at the same price, carriage paid to your address, on seven days' approval and no risk whatever, until you are perfectly satisfied with your purchase. I yearly sell many thousands of birds, and give every customer satisfaction. I guarantee to please you if entrusted with your order. I am now offering exceptional good value in typical Norwich cocks, 6/6, 7/6, 8/6, 10/6, 12/6, 15/-, 20/-, and 25/- each. Hens, 4/-, 4/6, 5/6, 6/6, 7/6, 8/6, 10/6, 12/6 each. Matched pairs, 8/6, 9/6, 10/6, 12/6, 15/-, 17/6, 20/- upwards. I receive many thousands of unsolicited testimonials, which are all open for your inspection. To make sure of satisfaction, send me your orders for whatever Canaries or British birds you require. Full new illustrated list post free. All Canaries sent carriage paid, on seven days' approval, at my risk. Travelling cages, 2d. each. Note the old and only address: Miss E. L. Storey, Bird Specialist, Crowle, Doncaster.

LATEST OPINION OF MACKLEY BROS.' BIRDS.

"High Street, Uppingham, Rutland. Jan. 12th, 1907. Dear Sirs,—The two Birds arrived safe, in the PICTURE OF HEALTH; they are the BEST TYPE of Norwich Plainhead I ever saw. I am HIGHLY DELIGHTED with them. I shall certainly recommend you to all I have the opportunity of so doing. I never had the favour done me from any one FIRM but yours by sending birds on approval without the Deposit System. Trusting the Firm of MACKLEY BROS. may live and reign for the sake of their customers.—Yours faithfully, J. Waddingham to Mackley Bros."

Postal and Telegraphic Address: **MACKLEY BROS., (Jacob Mackley), NORWICH.**

Turnbull."—"January 2nd, 1907.—Birds arrived, are singing well.—R. M. Lee, 79, Mill Street, Crewe."—"Broom, Newton Mears, Glasgow.—The birds arrived in good condition; I am well pleased with such value.—J. Broom."—"January 2nd, 1907, 32, Easson Road, Darlington.—Bird to hand. I like the song wonderfully well, and thank you for your prompt delivery and attention to my instructions.—H. Hutchison."—Send all orders to Varney, Stratford, London.

Hummel Rollers.

Finest Rollers imported. To speak well of the Hummel is to gild refined gold. Testimonials from customers who say the Hummel is still singing as sweetly as when purchased four, five, six, and seven years ago. All Hummels have delightful, deep, delicate bow roll, hollow roll, hollow bow roll, du pipe, hollow bell roll, grand round bass roll, vibrating hollow roll, and charming water bubble roll: one price only, 12s. 6d.; no fancy prices; Hummel hens, 3s. each; a beautiful pair of Hummels for 15s. St. Andreasberg Rollers, 5s. and 7s. 6d. each. Hummel Schoolmasters, 20s. each, better than can he obtained elsewhere at treble the price. Thousands of testimonials have been published by me in CAGE BIRDS from satisfied customers. I guarantee strictly honourable trading and satisfaction to all.—Varney, sole proprietor and importer of this remarkable Roller Canary. Twenty years advertiser.—Varney, Stratford, London. Export a speciality. "The Schools, Overton, Ellesmere.—Hummel arrived, it at once commenced to sing—yes, a song worth listening to. It is the most exquisite songster I ever heard—decidedly a perfect Roller. I may say I never expected such perfection; they are worth all you charge for them. I must thank you for your courtesy, and shall he able to recommend your firm to those who require birds and not rubbish."—F. Robbins, to Varney, Stratford, London, Sole Proprietor and Wholesale Roller Canary Importer and Dealer.

£860. STOCK. £860.

Miss Storey has just secured the best and most desirable stock of genuine highly-trained Rollers that has ever been imported into England. These are not a lot of wasters picked up in German markets, but the whole stock of one of the most noted Roller breeders. Every bird is cheap at 20/- each; but as I have bought them right I offer these high-class birds at about half their value. Genuine highly trained cocks, in full song, by day and gaslight, 8/6, 10/6, and 12/6 each. Picked contest and Bandmaster songsters, 15/-, 17/6, and 20/- each. Pure Roller hens, of same breed, 3/6, 4/6, 5/6 each. For loud songsters that will make the place ring with their song. I have a lot of selected Yorkshire and Norwich songsters, 7/6, 8/6, 10/6. I could fill this page with letters of praise. All I ask is let me send you one of my birds, carriage paid, on seven days' approval, at my risk, and you will be convinced that the quality of the bird is the best, and the prices are the most reasonable. Send postcard for my new illustrated list. Neat travelling cages, 2d. each; all birds carriage paid, on seven days' approval.—Miss E. L. Storey, Importer and Breeder, Crowle, Doncaster.

Scotch Fancies.

BUFF cock, 15/-; buff hen, 15/-.—J. Ballantyne, The Square, Melrose.

Illustrated Price List post free.

NOTE.—Old and Original Address:—

J. TAYLOR,
9, Northdale Road, Frizinghall,
BRADFORD.

E. TAYLOR'S Magnet of Method!!

E. TAYLOR has built up a business of splendid magnitude, large connection, and wide-reaching popularity on the following simple but unassailable principles: (1) A thorough knowledge of everything associated with Birds and Bird Appliances; (2) Dealing honourably with every customer, as he would wish to be dealt with himself; (3) Giving to every customer's commands the most careful and painstaking consideration; (4) Proving to the customer, by the test of the customer's own experience, that in the hands of **E. TAYLOR** his interests are kept safe and inviolate; (5) Acting always on truly fair-and-square lines; and (6) Never doing business on a scale of exorbitant charges. **E. TAYLOR'S** creed supports his Catalogue. See **E. TAYLOR'S** Catalogue and form your own judgment. Never mind, though others may have disappointed you before. That is only a stronger reason why, like Shylock, "thou shouldst not let the serpent sting thee twice!" Illustrated Catalogue sent on receipt of two penny stamps to cover postage, or Bird Price List free.

Remember that I send every Bird out on one full week's approval on C. B. Deposit System if desired.

My enormous stock of Canaries includes the largest collection of TYPICAL YORKSHIRES to be seen in any one establishment in the world. The recognised Headquarters by Fanciers, Dealers, etc., for Prize-bred Yorkshires.

E. TAYLOR, BIRD SPECIALIST,
3 & 7, Thornton Road, BRADFORD.

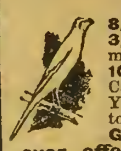
CHAMPION YORKSHIRES.

SPECIAL Notice.—Write or call at any time and see my spleudid lot of long, slim, straight, upstanding Yorkshires; every bird in the primest condition, with plumage like silk; every cock warranted singing; all cold room bred and kept. I have them in all colours except Greens, and all on seven days' approval; cash or deposit; Yellow cocks, orange-yellow, 8s. 6d., 9s. 6d., 10s. 6d.; Buffs, cocks, 7s. 6d., 8s. 6d., 10s. 6d.; Orange-Yellow hens, 4s. 6d., 5s., 5s. 6d.; Buff hens, 3s. 6d., 4s., 4s. 6d.; inspection invited.—Shaw, 97, Essex Road, Islington, London,

WHAT WINS.

What wins your confidence, the confidence of your friends, and the good faith of every bird lover at home and abroad, is the genuine straightforwardness and honest dealing of the Lady Bird Specialist. Why not favour her with your order? If it be for one bird or one thousand, you will be sure to be perfectly satisfied with your purchase. She sends all her Canaries carriage paid, on seven days' approval, taking all risk during the time of approval, guaranteeing you sound, healthy birds of good quality at reasonable prices. Her stock of high-class Yorkshires is undoubtedly the best and one of the largest in England (no half-bred and crossed foreign rubbish here); over 10,000 birds to select from Tight-feathered up-standing Yorkshire cocks, in full song, 6/6, 7/6, 8/6, 10/6, 12/6, 15/- each. Racy Yorkshire hens, 3/6, 4/6, 5/6, 6/6, 7/6, 8/6, 10/6 each. Properly matched pairs, 8/6, 10/6, 12/6, 15/-, 17/6, 20/- per pair. A few winners at reasonable prices. A trial order will convince you and your friends that for good quality, at low prices, it is impossible to equal Miss Storey. Every customer sends an unsolicited testimonial. Many thousands open for inspection. See my previous advertisement. If you want good reliable birds at reasonable prices, send your order to Miss Storey, who has a large stock of Norwich at the same prices as Yorkshires. All Canaries are sent to your address, carriage paid, on seven clear days' approval. Travelling cages, 2d. each. New up-to-date illustrated price list post free. Note the old and only address: Miss E. L. Storey, Bird Specialist, Crowle, Doncaster.

YORKSHIRES TO SUIT ALL.



Immense Stock. Cocks, 6/6, 7/6, 8/6, 10/6, 15/-, 20/-, 30/-. Hens, 3/6, 4/6, 5/6, 7/6, 10/6, 15/-. Pairs matched for breeding, 8/6, 9/6, 10/6, 12/6, 15/-, 20/-. Travelling Cages, 3d. extra. Such value in Yorkshires has never before been touched. **All on Approval. Guaranteed the best value ever offered in Yorkshires.** A pair, with good Breeding Cage fitted complete for an immediate start, 13/6, 15/-, and 20/-.

See my advertisement on page 407.

W. RUDD, THE Bird Specialist, **Norwich.**

TWO exhibition light cock Goldfinch-Canary Mules, 1906 birds, prize winners, 12/6 each; approval, cash or deposit.—Arthur Hill, Signalman, Stone Station, Staffordshire.

DO NOT CREDIT ME

With the following statements. I have nothing to do with them beyond supplying such value as to bring forth astonishment in most cases as compared with experiences with purchases elsewhere. I am prepared to endeavour to do the same for all who favour me with an order, as **all are unsolicited,** and only a few out of hundreds of others received during the last week or two. See advertisements under the different headings.

Both Paired Up.

5, Constantine-st., Williamstown, Penygraig, April 25th, 1907.—The two hens arrived quite safe and sound, and I am more than pleased with them. Both have paired up.—F. Vickery to W. Rudd.

Must Congratulate.

79, Tewkesbury-rd., Cheltenham, April 17th, 1907. —Please send ————. I must congratulate you on your very useful and splendid catalogue and Amateur's Guide.—C. Curtis to W. Rudd.

A Splendid Hen.

London, April 26th, 1907.—Bird arrived safely. I am very pleased with it, and think it a splendid hen Book is just what I wanted.—C. Flendell to W. Rudd.

Best Hen Ever Seen, etc.

29, Macey-st., Torpoint, Cornwall, April 27th, 1907. —The hen I received from you last week is the best I have ever seen. I am highly satisfied. If all that advertise were as straightforward as you, the deposit system would be a thing of the past.—J. H. Partridge to W. Rudd.

Bird O.K.

Laburnum-grove, Moseley, April 26th, 1907.—Bird O.K. Am delighted with her. Shall be wanting more soon, and of course shall send to you.—E. M. Ubsdell to W. Rudd.

More Appreciation of Promptness.

South Parade, Waterford, April 22nd, 1907.—The pair of Norwich arrived all right, and they are a very nice pair. I am obliged for your prompt attention to my order.—F. Lelan to W. Rudd.

Quite Pleased.

2, Eton-pl., Scotstoun, Glasgow, April 24th, 1907.—Please accept my belated thanks for the bird you sent me. I am quite pleased with her. She will suit my purpose admirably.—W. Denholm to W. Rudd.

Quality Like This, etc.

Portsmouth, April 26th.—Birds quite safe. Am more than satisfied. Shall not deal locally while I can get quality like this.—E. Cox to W. Rudd.

Really Wonderful for the Money.

Greenfield, Alloa, N.B., April 27th, 1907.—I received the pair of Norwich on Thursday, and am very pleased with them. They are really wonderful for the money.—M. S. Thomson to W. Rudd.

Never Looked Behind Since, etc.

Front-st., West Pelton, Co. Durham, April 22nd.—Glad to inform you that the Yorkshire I received is all right, and was singing the night I received him, and has never looked behind him since. He is a good specimen, and well worth the money. Thanks for prompt delivery.—Wm. White to W. Rudd.

Never So Well Satisfied Before.

43, Wood-st., Gt. Grimsby, April 23rd, 1907.—Bird arrived safe. It is a beauty, and started singing before he had been in the house five minutes. I never was so well satisfied with anything before.—O. Brocklesby to W. Rudd.

Superior to any Bought at Double the Price.

18, Jarrah-cottages, Purfleet, April 23rd, 1907.—I received the clear buff hen safely, and I am very pleased with it. Superior to any other bird I have bought at double the money.—A. Farraway to W. Rudd.

Can Rely on a Man Like You.

Chilvers Coton, April 8th, 1907.—Bird arrived safely, and is in the pink of condition. It is just what I wanted, but I did not expect one so good for the money. Thanks for honest dealing; can rely on a man like you.—Wm. Dickin to W. Rudd.

Found the Right Man for the Right Stuff.

30, Richmond-st., Accrington, April 24th, 1907.—I am pleased to inform you that the two birds arrived safe. I was very pleased to find that there is a real gentleman in the "Fancy." The reason I say this is that I have been "had" twice in succession, and now I have found the right man for the right stuff, and am so pleased with my bargain that I shall do my best for you as far as business goes.—J. Newton to W. Rudd.

Never Heard Such, etc.

2, Victoria-ter., Llansamlet, Glam., April 27th, 1907.—It gives me great pleasure to be in a position to recommend your birds as "perfect songsters." The bird I received gives me entire satisfaction. I never heard such a songster. Wishing you every success.—Ed. Nolan to W. Rudd.

Splendid Value for Money.

48, Chapel-st., Penzance, April 27th, 1907.—I have received the pair of birds safe, and I am very pleased with them. They are splendid value for money. Thanks for prompt attention.—E. Richards to W. Rudd.

Opinion of an Old Fancier.

36, Avon-st., C. on M., Manchester, April 28th, 1907.—Birds to hand. I am really pleased with them. First dealings as an old fancier I have had with you. Could not get their equal here.—T. Pease to W. Rudd.

All Amateurs should try my Special Matched Pairs of Prize-bred Norwich Plainheads at 12/6, 15/-, and 20/-. Crested ditto, 15/-, 20/-, 25/- and 30/-. Yorkshires, 12/6, 15/-, 20/-. Ready for immediate breeding.

ALL BIRDS ON APPROVAL.

TRAVELLING CAGES, in all cases, 3d. extra.

IF YOU CANNOT SEE

what you require, send for fully **Extended Price List free.** Unlike many imitations of this List, **it is genuine,** because I possess the birds there mentioned and **challenge denial.** They can be seen, not on paper but in reality.

NOTE.—For **three stamps** I will send my **Amateurs' Guide and Breeders' Handy Diary,** containing over **250 Illustrations.**

"EGGERTINE."

It is the best, purest, and greatest bone and muscle forming food ever known, as the analytical reports of most eminent authorities prove. It will bring hens into sound and robust condition for breeding as nothing else will. This during the past twenty years has been proved by thousands. It is a genuine egg food made with fresh laid English eggs, with white, of course, included (and NOT foreign preserved yolk of egg) with other valuable properties combined. Tins, post free, **1s. 3d.**; large size, **2s. 6d.** There is a saving in the larger size.

"ASTHMARINE."

This remedy has the largest sale of any similar article by far. Beware of imitations! For all lung affections it is marvellously efficacious not a liver burner, but both soothing and healing, 9d. and 2s. 6d. per bottle, post free. Once used, always kept ready for any sudden attack.

Wrought Wonders.

16, St. Mary-st., Dundee, April 28th, 1907.—Please send me two bottles of Tonic Drops. The last has wrought wonders with my birds.—D. Kydd to W. Rudd.

Another Convincing Fact.

Thirsk, April 24th, 1907.—Thanks for the Asthmarine. It has quite cured my hen Canary (which I could ill afford to lose just now).—A. Villier to W. Rudd.

Done Such a Lot of Good.

The Cottage, High-st., Heacham, April 18th, 1907. —Please send me one bottle of Asthmarine; I find it splendid. Done such a lot of good.—E. Graver to W. Rudd.

After the stress of the Show Season your birds naturally require a pick-me-up. There is nothing in the Bird World that can compare with RUDD'S

CELEBRATED TONIC DROPS,

The Most Invigorating Preparation on the Market.

W. RUDD,

THE Bird Specialist,

NORWICH.

FOREIGN BIRDS—continued

BOOKLET FREE.

FINEST Talking Parrots. I only deal in Parrots that will make first-class talkers; no rubbish. I am willing at all times to send my Parrots on four weeks' trial and three months' talking guarantee. Why? Because all my Parrots are young, strong, and reliable. My lifetime has been spent among grey Parrots, both at home and abroad. I guarantee every customer every satisfaction. Grey Parrots are my special fancy. I have trained them, know their wants, and can give every purchaser a bird that will please him in every way. I can supply grey talkers, not thinkers, that will say almost anything, at reasonable prices. Before you purchase a grey or green Parrot, send for my Booklet, entitled "Talking Parrots." All my birds are sent on four weeks' trial, at my risk. Send postcard for catalogue.—Mrs. Forster, Princes Park Aviaries, Violet Street, Liverpool.

AFRICAN GREY PARROTS.

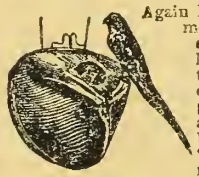
K. Daley, 95, Tithebarn-st., Liverpool.

PARROT LOVERS

Should send post-card immediately for our new enlarged book entitled "Parrot Prattle" (registered copyright, infringers and imitators will be proceeded against). This book contains 120 pages of very interesting facts, and gives valuable advice and hints to all parrot buyers. Full details of our original system of selling Parrots on four week's trial, at our risk, which we were the first to introduce. We sell Parrots of all descriptions on four weeks' trial, at our risk, before settlement. Cheapest and best in the Kingdom, and any Parrot sold by us, and not giving full satisfaction, will be exchanged any time within twelve months. Remember we lead and others try to follow. Write to other dealers as well as us, and judge for yourselves. Lists of Parrots for sale and above book post free on receipt of postcard.

PARROT AVIARIES, MORECAMBE.



Again I wager £25 that I have wired more husks than any other person living. Has any other maker, however large, sufficient pluck to accept and deposit with editor? My selected **"Improved Secure" Husks** are really and absolutely unbreakable; they have stood the "wonderful" test of 18 years—not six months. Competition always increases their popularity, and still they remain unequalled. Don't be gulled by any paper puff, but listen what experts say:—CAGE BIRDS says they are "far superior to the old husks." "Feathered World" says: "Undoubtedly, the new husks are very superior to the old." Again "Exchange and Mart" says: "Those prepared by Mr. Harper are very superior to the old style, which often fall to pieces at the most critical time, with disastrous results for the nestlings. You had better order the improved form; even if it is a little dearer than the old-fashioned sort, it is cheaper in the long run." "Fur and Feather" tells its correspondents: "They have distinct advantages over the old sort." "Poultry" has said: "For Budgerigars we advise the use of the improved style of husks." Surely these are convincing testimonials. They are **4/6** dozen; smaller quantities, **5d.** each. Interesting pamphlet, entitled "Budgerigar Breeding," free on application. Superior box nests for Cockatiels, etc., **1/6.** Send for the pamphlet now.

HARPER, Upper Villiers Street, WOLVERHAMPTON.

HUSK NESTS.

Again, I say, too busy for fairy tales. Try a sample set for **1/-**, it will save you a lost season. **3/-, 4/-, 5/-** doz.

Cokernut Shell Nests, for small Finches, etc., **4/-** and **6/-** doz. Sample pair, **1/-** (carriage paid).

Cockatiel Box Nest, the very latest idea, approved by all the leading aviculturists, **1/-**; varnished **1/6.** Special terms to trade. Write for prices.

PEARSON, COKERNUT MERCHANT, GREENWICH.

ACCLIMATISED FOREIGNERS.

Yellow Budgerigars, **15/-** pair; Green Budgerigars, **7/6** pair; Cock Snowfinch, **12/6**; Rufus Tails, **12/6** pair; Pileterello Finches, **10/-** pair; Java Sparrows, Cordon Blues, Firefinches, and Orange Cheeks, all **4/6** a pair; Saffron Finches, **10/-** pair; Cock Crimson Bishop, **10/-**; Cock Madagascar Weaver, **7/6.** Travelling Cages, **4d.** and **6d.** each.

Large bundles Millet Sprays, **1/9** bundle. Specially Mixed Seed for Foreign Birds, **1/9** gallon. Husk Nests, **6d.** Rush Nests, **6d.**

Illustrated Catalogue Free.

WALSH, BIRD SPECIALIST, Regent St., BLACKBURN.

Advertisements continued on page 424.

Foreign Bird Queries continued from p. 416.

Birds for Aviary Cage.

(1) Are there any birds in enclosed list which should be removed? The cage is 3½ ft. by 2 ft. by 6 ft. high. (2) The Pekins snap at and chase the small birds at roosting time. Will they do any harm? (3) Zebra Finches just introduced are very quarrelsome. Will they settle down? (4) Saffron Finch is nervous; is there any way of taming him?—M.L.G.

M.L.G.—(1) Note.—It is the base of an aviary that regulates the accommodation, not height, and you ought not to keep more than a dozen, or at the most 15, in same, and I advise the removal of the Pekins and Saffron Finch. Some keep the Madagascar Weavers in with small birds, but the practice is rather risky; however, if you have a number of twiggy branches arranged at top of aviary, with a few shell, husk, and rush nests as night retreats, you may run the risk of such action. (2) I have never had a Pekin yet that harmed other birds, but I have heard of such. It would be harmful if the small birds were continuously harassed. The remedy is ample perching accommodation and numerous seed hoppers. (3) The Zebra Finches are like the English Sparrow, mischievous and interfering little rascals, and under any conditions they always want to breed. Let them have a husk and a little grass and hay, and they will rear you some young in spite of so much company. I do not think these will do any harm. (4) The Saffron is very similar to the English Chaffinch, restless, alert, and always more or less wild, and takes some time to steady down. If you have a spare Canary breeding cage, put him in this, and tempt him with an occasional mealworm till he will take it from your fingers.

OUR CANARY BREEDING COMPETITION.

"It's a Good Thing, Push it Along."

I shall be pleased to do all that lies in my power to assist. You can rely upon my full co-operation.—R. ROLL, Sec. Norwich Alliance C.B.A.

In reply to the many correspondents who have written asking for forms we may say that these will not be required for some time yet. They will be forwarded in due course to all applicants.

I think your Canary Breeding Competition very good, and will, no doubt, be a good help to cage bird societies. I will help on the cause to the uttermost.—A. ACKROYN, Sec. Federation of C.B. Societies.

E. W. FOWLER.—It will be very easy to secure the checking of any results in Spalding. We presume you are a member of the local society, of which Mr. W. Murrell, Printer, Station Road, is the hon. sec.

Your Breeding Competition is quite original, and should meet with success amongst the novices, and be the means of increasing the membership of societies.—W. FOXALL, Waterloo, Ashton-under-Lyne.

Several of our members whom I have conversed with regarding your scheme assure me that should they get to know of anyone taking up the hobby, they will persuade them to enter your competition.—A. WILKINSON, Hon. Sec. Garston B.B.A.

I consider this competition an excellent idea, which I sincerely hope will have the desired effect of inducing new fanciers to take up this charming hobby, which in due course is bound to increase the membership of societies.—J. MUNRO, Hon. Sec. Bristol C.B.S.

I am at your service to do anything I can that will further the interest of this competition, and will induce as many novices as I can to enter, and will help them all I am able to succeed in their hobby.—J. CHALLENGER, Hon. Sec. Perth and District C.B.F.S.

My society are quite prepared to do their utmost in promoting this competition. We think it an admirable way of getting hold of new fanciers. With best wishes for its success, and that of CAGE BIRDS.—J. M. NICHOLSON, Hon. Sec. Seaham Harbour C.B.B.A.

I shall be pleased to give you any assistance I can. The scheme is a good one, but would have been much more successful had you announced it a month earlier. The recruits will have difficulty in finding stock birds. I hear that the Border fanciers are doing well round here, but the Scotch Fancy men are quiet yet.—ALEX. SMITH, Hon. Sec. Galashiels O.S.

W. NORRIS.—We have already said that the birds are not to be judged for points, but numbers, according to the pairs put up. A Roller breeder would thus stand an equal chance with a breeder of Norwich or Yorkshires. The answer to B. L. L. was advice given on a definite query relating to specific circumstances. Very pleased to hear about rings, and congratulate you.

I shall be pleased to make this excellent Breeding Competition widely known, as it is the plan to strengthen societies by making new members as well as making them readers of CAGE BIRDS. I shall be glad to receive a parcel of the cards you mention, so that I can distribute them at our next meeting. The scheme is a grand idea. Wishing CAGE BIRDS all the success it deserves.—GEORGE FRANCIS, Hon. Sec. Lowestoft C.B.S.

I have never bred a bird in my life, or ever thought of breeding birds; but a friend of mine kept persuading me to try, so I am giving it a trial, and now I have got that way that I cannot keep out of my bird room. When I am working, five o'clock seems such a long time coming. I am going in to win your competition. That is my motto. I don't know whether there are any bird clubs in St. Helen's, but will try to find out. I have been taking CAGE BIRDS since last September, and a good job for me, or I should have killed all my birds with kindness.—GEORGE MYERS, 129, Vincent Street, St. Helens, Lancashire.

What a pity your No. 1 rule is so strict in the definition of a novice! Don't you think you could make the rule to read, "Anyone who has not bred Canaries previous to 1906"? I commenced last season with one cock and two hens. Of those hatched I only lost two, and that was because I moved the nest-box when they were about a week old. I consider I am a novice, and should like very much to go in for that cup. I commenced taking CAGE BIRDS last year, and, with CAGE BIRDS and CAGE BIRDS ANNUAL, I consider no one need be ignorant in knowing how to breed, rear and feed birds. I was at two shows last year, and consider some of my birds are quite equal to some of the prize-winners. I have decided to colour feed this year and show some of my best birds. I have put two pairs Norwich Plainhead and one pair of Yorkshire for breeding, and shall try Hybrid (Goldfinch and Canary) breeding as well. The "Tell six plan" I am afraid is no use to me, as I live in a country village. I have got one friend to take CAGE BIRDS.

WM DUCKOR.

[Every rule or regulation with restrictions presses hardly on someone, and, whilst we sympathise with Mr. Duckor in his inability to compete, we would like to point out that, had we made our competition for two-year-old breeders, those of three would have thought it hard lines to be kept out. However, we have Mr. Duckor's sympathy and assistance, for both of which we are thankful. We may point out, however, that he may compete in the open competition.]

IN THE COURTS.

LINNETS OR SPARROWS?

Wild Birds Act Cases at Brighton.

Alfred Mitchell and Arthur Mitchell were summoned at Brighton for using two nets on April 14th for the purpose of taking certain prohibited wild birds. They pleaded not guilty. F. W. Lovejoy, R.S.P.C.A., spoke to making observation of the defendants in the morning of the day in question. They were on a piece of ground in the Hospital Road. They set their nets about 7 o'clock, and they visited them occasionally. There were three "brace" Linnets between the two nets, and on either side of the nets there were seven decoy Linnets in cages, and three Goldfinches. P.S. Pelling corroborated. Alfred Mitchell said that the nets were set on March 7th, when he sowed his seed, and they had remained in the same position ever since. He used them for protecting his peas and strawberries, and for catching Sparrows. He averred that two of the birds braced up were Sparrows. The Linnet which had been taken possession of was in a cage. It was untrue to say that the Inspector saw his son taking birds out of the nets. Arthur Mitchell said his father had an allotment, and it was nearly all cultivated. He denied that any birds had been seen by the Inspector to fly away. No birds of any kind had been caught that morning. The Magistrate's Clerk pointed out that, according to the Act, the penalty was to be based on the number of birds caught. There was no provision made, under the section adopted, for a penalty for the general act of catching birds. The Chairmen said the defendant would be given the benefit of the doubt, but he would advise them to protect their strawberries in some other way. It was quite a proper case to bring forward.

Alfred Ford was also summoned for using two nets at Brighton on April 14th for the purpose of taking certain prohibited wild birds. He pleaded not guilty. Inspector Lovejoy said he kept defendant under observation through field-glasses from 7.15 to 8.30. He was attending nets on ground in the Hospital Road. Defendant went to the nets nine times, and released birds. On the ground witness found two nets properly set for catching birds. There were four decoy Linnets in cages. Defendant denied that he beard the Inspector say anything. The Inspector was several yards off when defendant released the birds, which were Sparrows. He caught four Sparrows, because they destroyed his seed. Defendant was fined 4s. and costs, in default seven days' imprisonment. The birds and the nets were confiscated.

I have always found money spent on advertisements in CAGE BIRDS a good investment. —E. BEARSBY, Victoria Road, Tunbridge Wells.

THE YORKSHIRE CANARY.

Some Interesting observations by Mr. R. L. Crisp on the production of a "breedy" appearance.

A lecture entitled "A Thesis on the Yorkshire Canary" was given by Mr. R. L. Crisp before a very full meeting of members and friends of the London Cage Bird Association on February 13th last. In the course of it, Mr. Crisp went into the oft-debated matter of the introduction of Belgian blood, for the purpose of producing a "breedy" appearance, and his interesting remarks anent the same are here reproduced, together, in illustration thereof, with life-size sketches of birds from the lecturer's own breeding-room, he very kindly giving our artist every facility for sketching the same.

No. 1.—First Cross of Belgian and Yorkshire.
Observe the thin neck and break at the shoulder indicating the Belgian.

Mr. Crisp said: A point in a Yorkshire which to my mind is of even greater importance than size, is what is known as "breed." This, of course, is closely allied to, if not part of, type. Not only does it give that lovely "swagger" which makes a Yorkshire so attractive, but it is the only means of giving them a naturally good position. So much importance do I attach to this "breed," that I have no hesitation in saying that the chance of producing a winner without it is extremely small. Moreover, continued breeding among birds none of which possess this characteristic will cause the stock to degenerate into what might be called Norwich-Yorkshires.

For the benefit of those who have recently joined our ranks, let me endeavour to make myself more clearly understood with regard to what I mean by a "breedy" bird. It is one whose head would be just missed if an imaginary straight line were drawn the whole length of the bird's back. In other words, the bird carries its head slightly forward, giving the shoulders a somewhat prominent appearance. Some will probably think that it is useless to talk about "breedy" stock birds, since, when they have quality and size, it is almost impossible to buy them even at a very high price. Wherefore, as my remarks are more particularly intended for those of more limited means, I will give what I believe to be the best methods of breeding them.

On more than one occasion I have succeeded in breeding a really good over length stock cock with a nice bit of shoulder from a large, good-feathered buff hen and a small, but very typical "breedy" yellow cock. This mating I mention because the birds are more easily procured than, as I have said before, large "breedy" stock cock or large yellow hens. Or it can be done by the purchase of good positioned, stilty-legged hens to pair with large cocks "down on leg." I really prefer the latter course, but unfortunately the class of hens necessary are most difficult to obtain; or, again, by the pairing of the above-mentioned small "breedy" yellow cock to two medium-sized hens of good quality, with the sole object of producing hens to pair the following year to the above-mentioned stock birds failing in position. In the subsequent (third) season a little judicious in-breeding on the side of the hens, say, aunt to nephew, with reasonable good fortune should bring about the desired result. It will be obvious to you all that this mating of relatives is the sequel to pairing the cock to two hens in the first instance. About four years ago the L.C.B.A. had a discussion on "Why are London fanciers so far behind the times?" when I contended that in regard to Yorkshires the craze for size, added to the lack of "breed," was largely responsible for that state of affairs, and although great progress has been made in the latter it is still one of the greatest failing with our southern birds. Experience leads me to think that Yorkshires have a tendency to revert to their original type, and to combat this it is necessary from time to time to introduce specimens into one's stock manifestly showing traces of a Belgian progenitor.

These views led me to try the Belgian cross for myself, and although I have not been able to entirely satisfy myself with results I still feel sure that it is a step in the right direction. Anyone who studies an up-to-date Yorkshire can at once discern that its most pleasing characteristics come from the Belgian; that is to say, position, swagger, slimness, wedgy appearance, and the straight cut from the shoulder to tail, all originate from the same source. Mr. Broadley, in his book on the variety, which I only read a short time since, advised the use of the Belgian hen, and I have no hesitation in bowing to such an authority, and were I again to try the experiment I should take his advice. But I used a cock for the purpose, thinking that I should be able to regain quality of feather quicker by so doing, as it is pretty generally admitted that quality proceeds more particularly from the maternal side, and so far I must admit the end justified the means. I have experienced far greater difficulty in regaining size, although I used Yorkshires on the large side for the respective crosses. The best Belgian I was able to obtain was a buff, and not exactly an ideal one for my purpose. I paired him to a cinnamon ticked yellow hen of good size, with round head and full neck. From this cross I reserved a lightly marked yellow hen (No. 1), of good quality for a first cross, and splendid position, but very small. This hen I paired to a cinnamon-marked buff cock, also with good head and neck, a son of the first-mentioned hen by another cock, so you will see I was pairing half-brother to half-sister on the maternal side, with the object of setting head, neck, and feather. In the first nest from these I had four young, all hens, of good quality, three of which went into fanciers' studs, and the other, a sister to No. 2 here illustrated, I paired to the black-eyed buff cock, which stood fourth at the last Palace Show. And, strange to say, the young from this pair were still on the small side (No. 3 is one), although the cock was about 7 in. long. No. 4, the larger, good coloured cock I have here, is from a cock of the second cross and a large yellow cinnamon-marked hen. The whole of the young from this mating were much larger, but not so good in quality. I am still retaining a cock and hen from it to pursue my experiments still farther.

In conclusion, allow me to thank you for your kind and patient attention, and I trust I have not wearied you with my prolonged remarks.

Note.—When giving Mr. Norman the respective lengths of the birds I omitted to mention that I had taken them from the point of the beak to the tip of the tail, consequently they appear as they now stand about half a ninch too long.—R.L.C.

A BOON AND A NECESSITY TO EVERY FANCIER.

"Cage Birds" Card Register and BREEDING CAGE LABELS.

THE STUD REGISTER.

No breeder of high-class birds can afford to be without **"Cage Birds" Stud Register** hanging in his birdroom. Printed on suitable stiff card, it is ruled to hold a complete record of the breeding results of six pairs of birds; invaluable for future reference, to ensure that knowledge of one's stock so essential to pedigree breeding.

Post free, 1d. each; 4 for 3d.; 9 for 6d.

THE BREEDING CAGE LABELS.

The Breeding Cage Labels are neatly printed in sets of twelve, on perforated gummed paper, and can be torn off and affixed to the cage in a moment.

Here is a reduced fac-simile, which will serve to show their utility.

Post free, 1d. per dozen; four dozen for 4d.

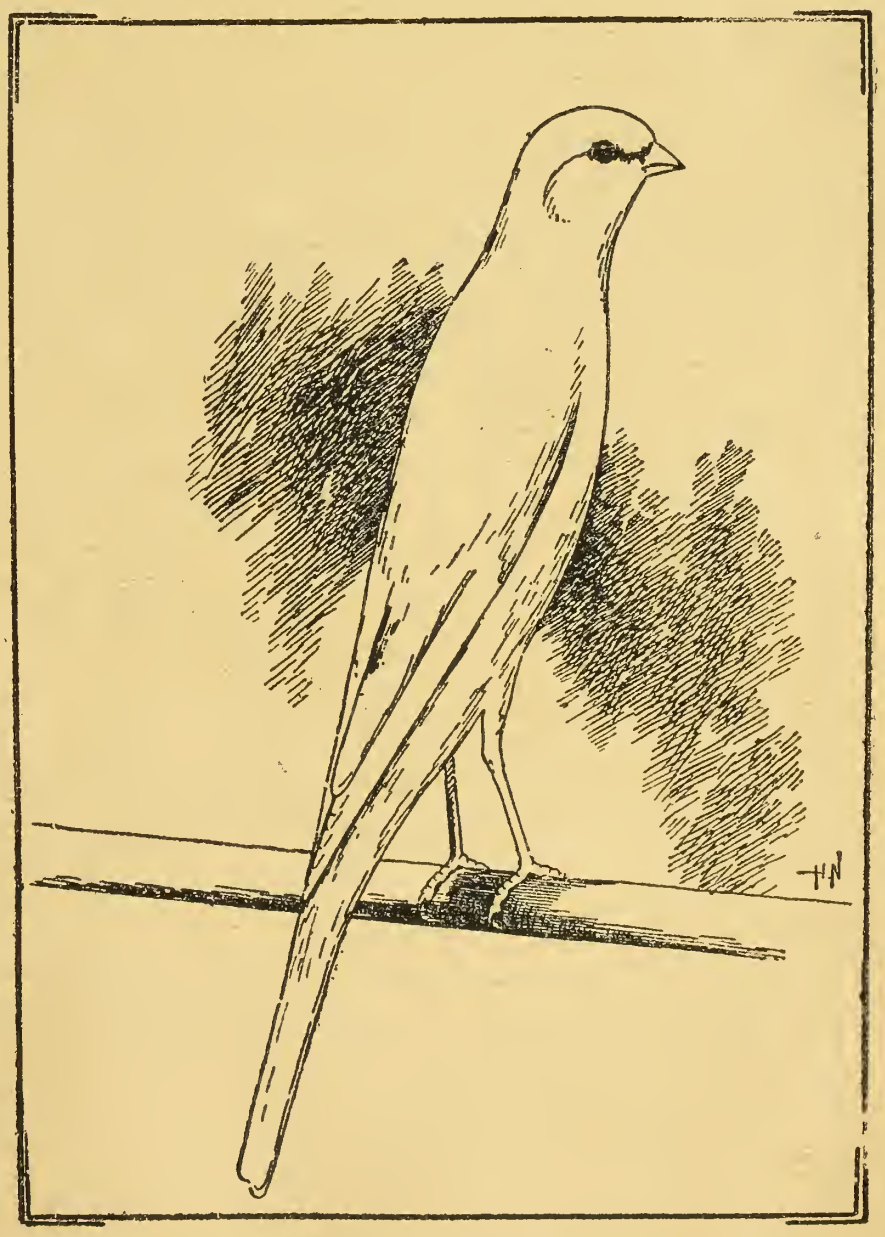
Address, **Manager, "Cage Birds," 154, Fleet Street, London, E.C.**



No. 2.—Second Cross of Yorkshire and Belgian.
(See Mr. Crisp's lecture.)
Here the Belgian has almost disappeared, leaving a fairly representative show bird.

THE CAGE BIRD UNION.

Special Council Meeting.

Disqualified Exhibitors of Greens Exonerated.

Council meeting of the C.B. Union, held at Manchester, April 27th. There were present Messrs. Bladon, Ramsden, Rhodes, Freestone, Hadwin, Wilson, Naden, Parker Robinson, Garner, and the Secretary. After reading the minutes of the last Council meeting and the Secretary's report, the notices of appeal by Messrs. Clayton and Stewart from a disqualification of two Greens at the recent Palace Show, for alleged cutting of feathers, were read.

THE EXHIBITORS PRESENT.

Messrs. Clayton and Stewart were present, and with them Messrs. Hellewell (Halifax), Thompson, Deakin and Cutmore (Liverpool). Mr. Hadwin opened the hearing on behalf of the two appellants.

Mr. HADWIN: I would like to ask Mr. Ramsden, is there any written disqualification by the judge, or was it made verbally?

Mr. RAMSDEN: It was marked on the judge's slip.

Mr. HADWIN: Messrs. Clayton and Stewart have asked me to take this matter up for them, and I take it that, as the disqualification is the same in each case, and at the same show, it is not necessary to make a separate statement for each. I have nothing to add to the statement sent to Mr. Lythgoe, and which has been sent to the members of the Council, except to refer to the question raised by Mr. Ramsden, as to the use of the word "jagged" in reference to the feathers in question, but which is explained in the first paragraph of my statement [herewith appended.—ED. "C. B."]:—

The birds were disqualified for "alleged trimmed feathers." Messrs. Stewart and Clayton appeal on the grounds that—

(Please note the feathers were jagged, not cut clean.)

(1) These jagged feathers are a natural growth, or have been caused by the birds themselves or some other accidental means.

(2) That they have not in any way trimmed the birds, neither did they know that such feathers existed on the birds at the time they sent them to the Palace Show.

(3) The entire absence of motive for trimming these feathers.

OBSERVATIONS.

(1) The very fact that the feathers were jagged should prove to any practical man that there was no trimming. Had there been trimming the feathers would have been cut clean. Had the feathers shown white tips, and it was thought desirable to move them, they would have been cut straight or clean. Since the disqualification similar jagged feathers have been found in practically all varieties of birds, which proves that the thing can easily happen by means other than the hands of man.

(2) At the G.C.A. meeting, which was called to meet Mr. Ramsden after the disqualification, and at which meeting all the facts of the case were clearly put, it was unanimously decided that Messrs. Clayton and Stewart were perfectly innocent in the matter. At the meeting there were several members who were financially interested in the disqualification being upheld, and yet not one single vote was recorded against them. This proves one of two things—Either that the G.C.A. members are a pack of rogues trying to support a couple of rogues, or that a body of practical breeders and exhibitors know that these jagged feathers are either natural or accidental.

(3) It is the entire absence of a motive for trimming which makes this thing so incomprehensible. In the first place, Mr. Clayton's bird is a "foul," so it would not have mattered if the feathers were white-tipped, but as it happens the feathers have moulted a natural colour. The cinnamon (brown?) tinge on Mr. Stewart's bird is perfectly natural to a Green bird, so that trimming or attempted trimming could only tend to spoiling the continuity of the pencillings, and so count against the exhibition properties of the bird.

Mr. HADWIN: We have brought down to-day a common Green Yorkshire Canary. If you will examine it, you will find it is full of feathers similar to those shown by Mr. Ramsden, and taken out of the disqualified birds. (Feathers taken from the two birds, the birds themselves, and the specimens brought by Mr. Deakin were carefully examined, along with enlarged photographs of feathers taken on the birds' backs.)

Mr. HADWIN then continued: Mr. Chairman and gentlemen, the principal point we make in connection with this matter is that the feathers in question are a natural growth. If the Council can see their way to accept this theory, it will settle the matter. We don't dispute the birds were shown with these square feathers, but we say the exhibitors didn't know they existed on the birds, and contend they are naturally square; but whether they have been damaged by some artificial means or not, we argue that the birds disqualified at the Palace were not cut by hand. In the first place, the feathers are "jagged"—that is, not cut straight across. Secondly, is there any motive for cutting? They cannot show any motive for trimming, say, white tips in the case of the foul bird. White tips would not be any detriment to it. And, in the other bird, the bronzing is perfectly natural to the bird, and trimming would only spoil the continuity of the markings. And I contend that before they should be disqualified for trimming there must be some motive shown, as, even if it was thought desirable, no one would have trimmed them in this fashion. The feathers that have been pulled out and re-grown have no white tips. It doesn't only affect the two men here to-day, but the whole of the fanciers of Green Canaries; and they know that similar feathers have been found in all varieties of birds. The whole case rests on the absence of motive. You must also take into consideration the characters of the two men. The entire affair was thrashed out at a meeting recently held of the Green Canary Association, and it was then unanimously decided these square feathers were a natural growth. Understand that at this meeting there were members present financially interested in the disqualification being upheld, and yet there was not a single vote recorded against this proposition

Mr. WILSON: I take it the point is, whether these birds were shown with their natural feathers or not?

Mr. RHODES: Is it acknowledged that a feather having a white edge is a defect, and that feathers do have white edges—and if so marked, a bird would be ineligible for a clear class—assuming a fancier had a bird with two or three light feathers, would there not be a motive in cutting these feathers?

Mr. HADWIN: To do this would break the continuity of the markings.

Mr. RHODES: Is it more difficult to breed selfs or those with foul feathers?

Mr. HADWIN: Selfs are more common than fouls; I should say, in the proportion of three to one.

Mr. NADEN: Were any other birds examined in the same classes? (Mr. Hadwin could not say.)

Mr. RHODES: Have you a bird here with light tips?

Mr. HADWIN: No. It is only on young Greens that the feathers come with white tips.

Mr. RHODES: It is uncommon, then, to have light tips?

Mr. HADWIN: Uncommon for a feather running dark right through to have a white tip.

Mr. RHODES: Your point is that unless the bird had white tips there was no inducement to trim them?

Mr. HADWIN: That is so.

Mr. BLADON: Do the white-tipped feathers come in quantities or only odd ones?

Mr. HADWIN: No; only one or two, and not generally on old birds.

Mr. RAMSDEN: Mr. Hadwin, you stated that when these birds were exhibited, the exhibitors were unaware there were square feathers on the birds.

Mr. HADWIN: Yes.

Mr. RAMSDEN: How many times has the previous owner of Mr. Stewart's bird been disqualified for this same thing?

Mr. HADWIN: I don't know of any case where birds have been disqualified for other than square feathers. We tried long ago to impress on the judges that square feathers were natural. This we assumed had been accepted, until the case of the recent Liverpool Show, when after luncheon, and following some discussion, Mr. Mundell looked to see if he could find any birds with square feathers, and he did. The particular bird here (Mr. Stewart's) was disqualified, and several others; and Mr. Mundell said if he disqualified any more for square feathers, he would have to do the lot. I showed him many birds having the square feathers.

Mr. RHODES: Why were not steps taken years ago, when birds were disqualified for square feathers, to have the matter settled?

Mr. HADWIN: The G.C.A. were not then in such a good position, and they didn't discuss the matter until recently, when the G.C.A. members asked for a definition on the question. They then decided that these square feathers were natural to Green birds, and also instructed the judges that square feathers should not constitute a disqualification against a bird. They thought they were not doing wrong in sending this to the judges at the Palace Show, as it was held under their patronage.

Mr. RHODES: Would not Mr. Mundell disqualify the birds because he believed they had been tampered with?

Mr. HADWIN: Yes; but I suggest that he would not do so now that the G.C.A. stated square feathers were not a ground for disqualification.

Mr. GARNER: Is it not giving the G.C.A. exhibitors too much license, as, if square feathers are allowed, it gives inducements to men to trim the birds?

Mr. HADWIN: I contend men cannot trim a bird's feathers in this way.

Mr. GARNER: I know they can. It is done in Lizards. The G.C.A. resolution amounts to allowing trimming.

Mr. HADWIN: I don't think so.

Mr. BLADON: Well, it is next door to it, and I am sorry to see the square feathers allowed.

Mr. RAMSDEN: My instructions from the L. and P.O.S. committee and the North London committee of the C.B.U. are that the whole question is being begged, and Mr. Hadwin is simply trailing a red herring across the path by referring to the question of square feathers. All the authorities admit that square feathers come natural to some birds, but the whole point is, are these particular feathers from the birds exhibited at the Palace Show cut? I submit that the feathers are cut, and I am supported by the disqualification by Mr. Heath, supported by judges Mundell and Robson, by Messrs. Russell, the expert photographers, and by experts at a leading museum.

THE FEATHER EXPERT'S REPORT.

I took these birds to the Museum, and, in the presence of Mr. Crabb and myself, these feathers were plucked out of the birds and afterwards examined by the authorities. The expert reported that the tips of the broken feathers had evidently not been cut with a pair of scissors, as under a glass it was evident that the barbules at the tips of each plate of the vane were still complete. It was, however, quite easy to produce this result with the aid of a pair of forceps, and to produce an irregularly broken end to the vane of any shape. He was not aware that new feathers could appear with imperfect ends; in fact, he was sure this was not the case. Under these circumstances it was his opinion that the feathers examined had been tampered with. He added that another expert who, at his request, had examined the feathers was also of the same opinion. A further report from the same authority stated it would be difficult to prove that the feathers had been tampered with, as similar results were produced by perfectly natural abrasion, and were often seen in birds which had, for some cause or other, not moulted clean, and had retained a portion of their old and faded plumage. But he did not believe this to have been the case in the present instance, for the feathers, though broken at the tips, were in no way faded. When fresh moulted the margins of all new feathers were entire, and, as there was no reason to suppose that certain individual feathers in the backs of the birds could have been torn or broken in the cage, it was reasonable to infer that the injury had been caused in some other way.

Mr. RAMSDEN (continuing): This is the evidence the two London committees rely on. Mr. Stewart had bought his bird from a man who had been disqualified several times, and very recently, for the same thing. I also took the feathers to the Liverpool Museum authorities, who also said the feathers had been cut by some means. I also submitted the birds to Mr. E J. Parry, the eminent analyst, London, who had withdrawn feathers and expressed the opinion these had been tampered with. He had since submitted for Mr. Parry's opinion some square feathers, and these were pronounced as being natural endings.

Mr. HADWIN asked if Mr. Cutmore, the principal taxidermist at the Liverpool Museum, might make a statement?

Mr. CUTMORE said he was sorry to be brought into the matter, and was not interested in the subject beyond wishing to see justice done. He gave it as his private opinion that, if the Museum experts quoted by Mr. Ramsden could come and see the birds in some of the Liverpool bird rooms, they would modify their opinion as to these feathers being cut. He enquired whether Mr. Ramsden asked these experts if the feathers could be cut by a bird's beak [Mr. Ramsden said No], and Mr. Cutmore submitted that the feathers might be cut by the bird's beak. He did not know the two exhibitors or their characters, but he thought the evidence was too flimsy to disqualify them on, and was convinced there was grave doubt that the cutting had been done by hand, and showed a diagram of a cut feather to show that the minute barbules were not cut, which they would have been had the feathers been cut with some sharp instrument.

Mr. RAMSDEN remarked that this was only a drawing, and not a photograph of a cut feather.

Mr. STEWART stated that he bought his bird just previous to the Palace Show, and was quite innocent of there being any square feathers on it.

Mr. THOMPSON (Liverpool) said he had been a breeder and exhibitor of Green Canaries for 10 or 14 years, and didn't know of any other disqualifiation for cut feathers except Mr. Wardale's, some three or four years ago, at Manchester, and in that instance the case was not proved.

Mr. LYTHGOE stated they gave Mr. Wardale the benefit of a doubt.

Mr. CLAYTON, one of the parties concerned, was then called on, and stated that he couldn't trim a bird's feathers if he tried, and that the feathers on his bird were not cut. He asked why no mention had been made of some square feathers sent to Mr. Ramsden by Mr. Hellewell?

Mr. RAMSDEN said he didn't refer to the feathers to save the Council's time, as they were not the feathers in dispute, and had really nothing to do with the case. He had, however, sent them to Mr. Seth Smith for his opinion, and this was his reply:—"In reply to yours of the 27th ult., the feathers you have sent for my inspection certainly never grew naturally as they now are, and it is difficult to imagine that they could have become so by natural abrasion. I should certainly say that they had been cut."

Mr. HELLEWELL stated that he took the feathers from birds in a novice breeder's room.

Mr. DEAKIN (Liverpool) stated that the specimen he had brought down was full of square feathers, and that they were natural.

Mr. RHODES asked Mr. Ramsden why these feathers should have been cut?

Mr. RAMSDEN replied that he didn't know. He had asked Mr. Heath the same thing, and Mr. Heath stated at the committee meeting that it would improve the birds by trimming the feathers.

The appellants and their friends left the room while the Council considered their decision.

Mr. BLADON asked them to carefully consider the matter, as so much depended upon it. He did not like the resolution of the G.C.A. on the question of square feathers being allowed. They were certainly a defect, and the resolution left it open for sharp practice on the part of exhibitors.

The question of motive was discussed, seeing that square feathers were generally admitted, and it was explained that there was some motive for trimming—for instance, to a man who might have two foul birds, one with a few light tips on the feathers, there would be an inducement to cut these tips off. He would thereby be able to show two birds in separate classes, instead of together—a great consideration to many exhibitors, especially if running for points for some special prize. It was also explained that it was quite likely if this square feather theory was allowed, and was supposed to be found on all birds, that a tick at the end of a feather of an otherwise clear bird might be cut off, and if detected would be alleged a square feather. It was also pointed out that the new feathers which had grown, replacing those drawn out of the birds, had grown with natural rounded feathers. After much discussion the following resolution was passed, without dissent, Mr. Ramsden having previously left the meeting:—

That, whilst recognising that the judge was justified in regarding the disqualified birds with the gravest possible suspicion, but having very fully and carefully considered the whole matter, this meeting acquits Messrs. Clayton and Stewart of dishonestly showing the birds in question.

Messrs. Clayton and Stewart were then called in and informed of the Council's resolution. They expressed their thanks, and the birds affected were returned to their owners, and the remaining business of the meeting proceeded with.

G. W. F. LYTHGOE, Hon. Sec.

"Impossible to equal for clearness, utility, completeness and money's worth."

"CAGE BIRDS" BREEDING ROOM REGISTER

AND

BIRD KEEPER'S ACCOUNT BOOK.

(COPYRIGHT.)

COMPILED BY G. E. WESTON.

The Latest Publication for the benefit of keepers of cage birds. Is framed on novel lines and contains many entirely new departures. Is absolutely indispensable to everyone interested in the hobby.

It has been represented to us that while our Stud Register Cards are admirable for the purpose of hanging up in the bird room to make notes on of the season's proceedings, something of a more substantial nature is desirable for the purpose of keeping a permanent record of the progress made.

To meet this need we have had compiled "Cage Birds" **Breeding Room Register and Bird Keeper's Account Book,** which offers in a handy form a means of keeping—

The complete pedigree and description of every bird in one's room.
A full record of the season's breeding experiences.
An account of every young bird reared, and how it was disposed of.
A register of one's doings at the shows (the most complete and useful yet devised).
A cash account for the year.
A profit and loss account of the season's proceedings, and a balance sheet showing how much one has invested in the hobby.

A series of Registers will thus furnish a concise record of the career of a fancier as a breeder and an exhibitor from year to year, or over any number of years.

Many useful Emergency and other Hints will also be found in its pages.

CLUB REPORTS.

BARROW AND DIS. C.B.A.

All communications in future in connection with the above Association are to be addressed to Wm. Willison, Sec., 17, Cameron-st., Barrow-in-Furness. New officers:—President, F. J. Wynn; vice-president, J. Higgins; treasurer, D. Grave; secretary, Wm. Willison.

BOURNEMOUTH AND DIS. C.B.A.

This Association's go-ahead hon. secs., E. Leech and J. W. Jones, with the help of Messrs. Crawshaw, Codnor, and Goodland, organised a grand ball, which was held at the Artillery Drill Hall on April 17th, dancing taking place from 8 p.m. until 3 a.m., to the strains of Mr. Pardy's Quadrille Band. A very large company of well-known residents was present, and the hon. secs. are to be congratulated on the way the arrangements were carried to such a successful issue, also to know they have so many friends ready to help in their untiring efforts. The hall was tastefully decorated with flags and flowers, etc., kindly lent by Messrs. Watts and Son and Messrs. Geo. West and Sons. The duties of M.C. were ably carried out by Mr. Crawshaw.

CINNAMON CANARY CLUB.

Annual Report.

I beg to submit you the balance-sheet for the past year, which, I hope, will meet with your approval, having shown all the items of expenditure as far as possible. I regret that our balance is somewhat smaller than last year, but our income is less, and the expenditure is a little larger, more patronage having been granted. Patronage was granted last year to Cheltenham, Manchester, L.P.O.S., Gateshead, Barrow, Scottish National, and Llanelly. Preston, Great Harwood, and others were withheld owing to clashing. An objection was lodged against Barrow on the grounds that no specials appeared in the schedule, and many members thereby did not send, and, on being submitted to the Committee, it was upheld. The gold medals for most points have been won by Messrs. Dormer and Hargreaves, with 262 and 80 points respectively. It is to be hoped that the shows under the patronage of the Club will be better supported next season, as it was decided at the general meeting to give four specials for the most points gained throughout the year. I have already received several applications for patronage, but I suggest holding them over until about the middle of June, and, in the meantime, ask through the Press for further applications, and then all can be submitted to the Committee for their decision. Any suggestions as to the welfare and working of the Club will be gladly received by

R. J. PRETTY, Hon. Sec.

CITY AND SUBURBAN A.C.B.

Meeting April 22nd. Following upon the election of Mr. B. Stevenson and the reading of several letters, prizes and specials won at the recent Finch Show were awarded (including the silver cup, won by F. Curry). A pleasant surprise was the return of 10s. 10½d. by Miss Brain, Messrs. A. E. Rouse, W. Francis, and Anonymous, who were heartily thanked. The quarterly statement of accounts, showing an income of £42 18s. 4d., an expenditure of £19 16s. 5d., with a balance of £23 1s. 11d., was adopted as read. Seventeen members took part in the Finch Show judging competition, with the following results:—1st, F. Turnber, 64 points; 2nd, F. Pullinger, 59 points; and 3rd, R. Elgar, with 50 points, who were each awarded a silver medal in case. It was considered that the financial position justified the Association in advancing one more step by embarking upon an expenditure for the production of diplomas, the same to be put in hand at once. Messrs. J. Robson and R. L. Crisp, for the Canary section, and Messrs. C. Prior and G. E. Weston, for the British section, were nominated as judges for the Young Bird Show. In the Essay Competition there were seven members sent in papers on "Breeding," and after the reading of the same by the Secretary, the following was the result of the voting:—1st, "Fresh Air," J. Pooley; 2nd, "Doing Well," W. Page; 3rd, "Suburban," F. Vincent; 4th, "Seedy One," E. Watling; 5th, "Socrates," R. P. Broome; 6th, "Canary Food," F. W. Ducker; 7th, "Hopeful," Miss Shepherd. At the close prizes consisting of 10/-, 5/-, and 2/6, given by Messrs. F. Pullinger, A. W. Curtis, and the Association, were presented by the Chairman, Mr. A. C. Burn, to the winners. An enthusiastic vote of thanks was accorded to Mr. C. Prior for judging the Finch Show, this being his fifth year in succession

VICTOR WYNN, Hon. Sec.

CIVIL SERVICE F.A.

Annual meeting April 16th, Mr. Fred Biggs in the chair. The balance-sheet for the past year, which showed £3 16s. 2½d. in hand, was adopted. Messrs. A. W. Dance (of Southall), F. White (of Walthamstow), A. E. Oxley (of Old Ford-road), T. H. Alexander (Foreign Section, G.P.O.), W. E. Borham (of Croydon), R. C. Driver (of Duke-street, S.E.), and W. Moss (of Raynes Park) were duly elected. Mr. R. H. Dobin, of Great James-street, W.C., was nominated. Considerable discussion took place as to whether the Society should hold any young stock shows this season, when it was agreed that a young stock show of cage birds be held, and an annual members' show at the end of November, the date and place of the latter to be decided on as soon as possible. The following were elected officers for the year 1907-8:—Patrons, Viscount Dearhurst, J. A. Simon, M.P., and Thos. Wiles, M.P.; President, Mr. A. H. Roosmalecoeq; Vice-Presidents, Messrs. Geo. Bleach, J. R. S. Dixon, J. F. Hills; Chairman, Fred Biggs; Vice-Chairman, E. J. Voss; Hon. Treasurer, J. S. Barton; Auditors, E. E. Allen and W. James; Committee, G. R. Hooks, D. Hutchins, J. Russell, J. Slattery, Geo. Smalley, W. H. Wells, J. W. J. Westwood, and W. E. Willott; Hon. Assist. Secretary, A. E. Wheeler; Hon. Sec., A. Watson. Intending members sending in their names at once can have same printed in new rule books. Particulars of the Hon. Sec.,

A. WATSON.

37, Russell-road, Holloway, N.

FEDERATION OF CAGE BIRD SOCIETIES.

The adjourned annual meeting was held at Ashton-under-Lyne, on April 20th, Mr. Sharples presiding. The Sec. submitted the balance-sheet, which came out on the right side, with £1 6s. as a surplus. The following officers were elected:—President, Mr. F. Steeple (Oldham); Treasurer, Cr. Broadburst (Hazle Grove); Sec., Mr. Ackroyd (Oldham); Auditors, Messrs. Cooke (Mossley) and Sharples (Oldham). The report of the C.B.U. correspondence was submitted, and considered satisfactory. A very good meeting was brought to a close by the usual votes of thanks.

GREAT HORTON GOOD INTENT O.S.

On April 27th, Mr. J. T. Brook gave a paper on "The Breeding Room and its Requirements," illustrated in a practical manner. He dealt with what he called an ideal breeding room which, in his opinion must have the morning sun, and be ventilated in a proper manner to be free from draughts, etc. He prefers a bedroom to breed in, because he says the heat does not vary so much as does the room of an attic, which goes a long way in keeping the birds in perfect health. Unless the birds are in the pink of condition, he went on to say, no good results can possibly follow. The cages he described should be all one size, and have a double set of perches for each cage. The food and water vessels, along with the cages, should be kept scrupulously clean. When he makes new cages, he gives the wood work at the front a coat of glue water, which acts as a sizing, and follows on with two coats of black lacquer, which, when dry, can be cleaned with a cloth, and the lustre is still the same. He prefers zinc baths and seed hoppers. He showed us in a very short time how to make a cage front. All present felt that the evening had been spent for the uplifting of the Fancy. The usual vote of thanks brought the gathering to a close.

ALBERT HOLDEN, Sec.

GREEN CANARY ASSOCIATION.

Adjourned meeting April 25th, Mr. Metcalfe in the chair. Seventeen new members were elected, also the following officers:—President Mr. G. R. Johnson; Vice-Presidents, Mrs. C. M. Sunderland, Messrs. Hoople, Ryno, Coffey, Clayton, Denton, Hellewell, Naylor, Dean, Wardale, W. Thompson, B. Woods, Drinkwater, Hammond, Harrison, Jerkins, Pickup, Waters, Brennan, Bayley, Critchley, Creber, Fisher, Gill, Haworth, A. Brotherton, Richmond, Vernon, Kiner; Patrons, Sir A. L. Jones, K.C.M.G., D. McIver, Esq., M.P., Col. Whitney, V.D., W. J. Davey, Esq., W. W. Rutherford, Esq., M.P., M. Muirhead, Esq., J.P., C.C., John Henrickson, Esq., Sykes H. Gibson, Esq.; Chairman, Mr. J. W. Metcalfe; Vice. Mr. L. Handley; Treas., Mr. J. H. Isaacs; Assist. Sec., Mr. T. Wilson; Auditors, Messrs. Lawson and P. Moss; Committee, Messrs. Walker, Irwin, Hillman, Barratt, Doughty, Abbott, and Davies. It was decided that officers be elected in future by ballot of all the members, also that we have a uniform cage, and that the old show be a two days' show. It was also decided to ask all show committees accepting our patronage to have the classes for Greens judged by daylight, so as to be able to distinguish colours. Judges.—The judge who judges the open Yorkshire classes to judge the Yorkshire Greens. The judge who judges the open Norwich classes to judge the Norwich Greens. Classification.—All show committees writing for patronage must undertake to give four Yorkshire Green classes and four Norwich Green classes, Selfs and Fouls first show, and cocks and hens two following shows, and so on throughout the season. The meeting to allot patronage will be held in July. All applications for patronage must be in the hands of the Secretary by July 20th. Rules, standards, etc., will be gladly forwarded by the Secretary.

S. HADWIN.

2, Pembroke Place, Liverpool.

LEICESTER C.B.S.

Meeting held April 24th. It was decided to hold Nest Feather Show on June 22nd; upwards of eighty guarantees were made for same. The following new members were enrolled: Messrs. Claypole, Lawrance, Dent, and Kilbourne.

HUDDERSFIELD O.S.

On April 22nd Mr. R. Hallday read a paper on "Feeding and Rearing of Canaries" before a goodly number of members and friends, who were well repaid by the excellence of the paper, and the lucid manner in which the lecturer dealt with his subject. A very interesting discussion followed, which no doubt will prove of great benefit to most fanciers present. A hearty vote of thanks brought a very pleasant evening to a close.

S. LODGE, Sec.

LEITH O.S.

Meeting, April 13th, Mr. Jas. Lumsden presiding. Mr. P. Kelly and Mr. S. Buglass were admitted members. The Liberal Club Hall was unanimously chosen for the annual show. The classification was considered and decided:—Scotch (8), Norwich (6), Crests (2), Crestbreds (2), Borders (6), British (7), Mules and Hybrids (2). The election of judges was left over till next meeting. Hens were then booked to the number of about 80, which, with a successful breeding season, augurs well for the annual show. The meeting decided to accept new members up till the May meeting. Intending members should send on their names.

GEORGE BROWN, Sec.

9, Hermitage-terrace, Leith.

LONDON AND COUNTIES A.C.B.

There was a large attendance of members at the meeting on the 25th inst., among whom were Messrs. Thorpe (president), J. A. Simpson, Tringham, Ransley, Cox, H. Davis, E. Pretty, C. J. Willis, Morrison Key, Kelly, Adamthwaite, Williams, etc. A surprise visit was paid by Mr. G. Dunford, from East Grinstead, who received a very hearty welcome. The President called upon Mr. C. A. House for his lecture on "The Lancashire," which proved a very interesting and instructive subject, and was followed by the members with rapt attention. Remarks upon the same and questions were asked by Messrs. Dunford, E. Pretty, Thorpe, Hawes, R. J. Pretty, etc. At the close a vote of thanks was moved by Mr. Dunford, and carried by acclamation, to Mr. House. A similar tribute to Mr. Thorpe for presiding terminated a very successful meeting.

R. J. PRETTY, Sec.

METROPOLITAN A.C.M.H.B.

Meeting Thursday last. Mrs. Lessels was elected a member, and Mr. E. R. Portell was nominated. Mr. D. Mabey was elected, and Mr. C. A. House nominated as a vice-president. It was resolved to hold Young Bird Show on June 26th. Mr. J. Robson was elected as judge. It was announced that Mr. C. A. House would deliver a lecture on the Yorkshire Canary at our next meeting.

A. J. HEAD, Hon. Sec.

MORRISTON AND DIS. C.B.S.

First table show of Goldfinches and Linnets at Woodfield Coffee Tavern, on April 27th, which proved a most successful event. The entry turned up excellent, and competition in both classes was very keen, a few noted winners being staged. The show room was packed with visitors, together with several well-known exhibitors from neighbouring districts, who were enrolled as members, our radius of membership being fixed at twelve miles. We shall be very pleased to hear of anyone wishing to join. Mr. D. Jeremy judged. GOLDFINCH: 1, Stamp; 2, Glover; 3, D. Lewis; r, Wilcox; vhc, Rees; hc, Taylor; c, H. Lewis. LINNET: 1, Thomas; 2, hc, Taylor; 3, Wilcox; vhc, Price; c, Phillips.

ROTHERHAM C.B.S.

Annual meeting on Saturday. The best attendance we have had for some time. The entry for cups came up well, and, the other business through, the Chairman, Mr. G. Knowles, asked Mr. G. Browning to give his lecture on "Rearing and Breeding for Exhibition." Mr. Browning said:—The first item on my paper is the cages. I like plenty of room in them; enamel inside, so that when you have done breeding you can wash them out, and make them nice and sweet. Now, as to the stock birds, be sure you get healthy ones. There are plenty of novices who buy their birds: cocks from one place and the hens from any place. This is a great mistake. The best way is to find a breeder and put confidence in him. Tell him what you require, as he knows how his stock is bred. You will find that the best way, and you will not be very long in going the right way to be a successful breeder and exhibitor. As time was drawing on, the Lecturer said he had given his ideas, and he hoped the novice would learn a little from what he had said. The Chairman asked if any fancier would like to ask any question. One question which caused some amusement was: What was the reason of the hen laying a small egg, or extra large egg, or a double yolk one? Mr. Browning thought the Archdeacon suing for a thousand pounds damage to procure a ghost might be able to answer it. It was proposed that our best thanks be given Mr. Browning for his lecture. Mr. Browning briefly replied, and said he was only too pleased to be amongst us once more.

J. HAYES, Sec.

SCOTTISH CREST CLUB.

Official ballot for 1907. The result of the voting is as follows:—Committee, Messrs. J. Young, C. Campbell, J. Noble, J. McLay, G. F. Adamson, H. Moreland, G. Shillinglaw, G. Henderson, A. Miller, A. Chalmers, J. C. Wallace, W. Cairns, G. McPhail, W. Griffiths, D. Buchan, G. Mackie, J. Munro; Auditors, J. Young and J. McLay. Judges, J. Young, J. McLay, A. Chalmers, C. Campbell, J. C. Wallace, J. Noble; Sec. and Treas., A. Chalmers. Place for Club Show: Perth, Edinburgh, and Dundee were equal, with only three votes each. A Committee meeting will be held in Nelson's Hotel, Glasgow, on May 11th, hoping for a good turn out of members.

A. CHALMERS, Sec.

SEAHAM HARBOUR AND DIS. C.B.B.A.

Meeting held April 20th. We thoroughly discussed CAGE BIRDS Breeding Competition, and all thought it fine for novices. I believe some of our members are going in for it when they get fairly under weigh. We also decided to have a spring ramble on Sunday, May 5th, route to be settled at Saturday's meeting. Any fancier in our district who would like to have a walk with us will be as welcome as a nest of light Mules. We will leave the top of Church-street at 5.30 a.m. prompt, weather permitting, as some of our members wish to be back early. Hoping we have a good turn-out.

J. M. NICHOLSON, Sec.

WARRINGTON L.S.A.

Contest held at Alexandra Vaults, April 27th, when representatives from Swinton, Leigh, Wigan, and Warrington competed for six prizes, promoted by Mr. R. Thompson. The entries numbered 32, and some wonderful singing was heard, everybody present being well satisfied. Result: 1st, Armitage; 2nd, Stanway; 3rd, Ellison; 4th, 5th, 6th, Barker.—G. TRYNER, Hon. Sec.

JUDGES OF CAGE BIRDS.

The attention of Show Secretaries is directed to the following list of gentlemen willing to act as Judges. Terms for insertion on application.

A. AMBLER, 17, Lytton Road, Bradford. Judge of Canaries and Cage Birds. Life experience. 11 years reporter to the Fancy Press.

H. W. AXE, 55, Market Place, Doncaster. Judge of Canaries and other Cage Birds. Practical experience (Norwich and British speciality).

W. O BARLOW, The Aviaries, Malpas, Chesbire. Judge of Canaries, British Birds and Mules. Terms moderate

J. C. BARNES, 149, Duncombe Street, Walkley, Sheffield. Judge of Canaries and Cage Birds. Long practical experience. Terms moderate.

W. P. BARNES, Judge of Canaries and Cage Birds. Life practical experience. Breeder and exhibitor. Reporter for Fancy Press. Commercial Road, Grantham.

LEEDS.

The Prince Albert Linnet Association met April 28th to compete for three good prizes, given by Mr. J. R. Saynor. There were a large number of fanciers present. Fourteen picked birds sang for quality singing only. Judges, S. Green and B. Jackson; timekeeper, G. Towers. Result: 1st, 2nd, Allen; 3rd, Callaghan. The winning bird was largely applauded: it is a most marvellous Linnet, and every Linnet fancier wants to come and hear it, it is a chance of a lifetime. The bird has never been beaten yet.—E. WOOD, Sec

"CAGE BIRDS" BY POST.

The Subscription Rates for this Journal are as follows

13 Weeks	1s. 9d.
26 Weeks	3s. 3d.
52 Weeks	6s. 6d.

The Annual Subscription will, in future, include

A Free Copy of "Cage Birds Annual."

Copies are posted to Subscribers every Thursday evening promptly and regularly.

THE MANAGER, "Cage Birds.

Gillingham Show will be held on Nov. 7th and 8th. Judge, Mr. G. Gardner.

Mansfield Cage Bird Club have decided upon Nov. 1st and 2nd for their Annual Show. The judge elect is Mr. J. C. Barnes.

Our Show dates are June 8th and July 20th. Messrs. W. A. Cowgill and M. Broadley are the judges.—H. Dobson, Sec. Shipley O.S.

The Birkenhead C.F.A. has elected Mr. C. Houlton as judge for its First Feather Show, and Mr. J. Trengove for its Back-end Show.

Owing to unforeseen circumstances, I am compelled, reluctantly, to give up the office of Secretary of the Pendleton and Salford Society. —S. Skelton.

We have elected Messrs. J. H. Payne and David Bentley as judges for our Show on October 11th and 12th, 1907.—F. Sharples, Sec. Gt. Harwood and District C.B.S.

I am pleased to say I have had over 30 answers to my advertisement, two of them from Ireland, thanks to Cage Birds.—A. Smith, 26, Abbey Wood Road, Abbey Wood.

Mr. G. H. Billett, of Reading, is engaged to judge cage birds at Folkestone (July 3rd), Totterdown (July 26th), Woodstock (September 10th), Deal (October 9th), Chichester (November 21st).

I should like to congratulate you on the splendid supplement you provided for us in this week's Cage Birds. It is most interesting, especially for us novices.—A. J. Adams, West End, Southampton.

All communications for the Houghton-le-Spring and Dis. C.B.S. should be addressed to Mr. H. Fenwick, Market Place, Houghton-le-Spring, he having been elected Secretary, writes Mr. A. Widowfield.

A meeting will be held at the Belle Vue Hotel, Woodhouse Lane, Wigan, on May 8th, at 7 p.m., for the purpose of forming a bird club. All intending members are cordially invited.—James Harmer.

From Messrs. Payne and Wallace, of Bath, we have received a sample of the Cage Bird grit which they are offering through our advertisement columns. It is sharp and clean, and very reasonable in price.

I omitted the following in report of annual meeting:—Messrs. W. H. Shackleton (Girlington Bfd.), E. B. Denton (Windhill), Committee, and Mr. E. B. Denton in the list of subscribers. —R. Garnett, Sec. Cinnamon-marked Y.C.C.

Will you allow me to thank those who have contributed to the Sholedice Testimonial Fund, and at the same time ask those who have not already sent on to do so as soon as possible?—C. J. Mulligan, Holborn Street, Sligo.

We are pleased to see from this year's list that the Leeds C.B.S. is keeping up its membership. Messrs. Stephenson and Hornby, 19, Hartley Grove, Woodhouse, Leeds, will be pleased to give any information concerning the society.

At a meeting of Llanrwst fanciers, held on April 26th, it was decided to hold a show of cage birds, etc., in October. The next meeting will be held on May 8th. Mr. J. Kershaw, 15, Watling Street, Llanrwst, will be pleased to give any information anent the matter.

At the last meeting of the Dysart Society, on April 24th, it was decided to drop the Pigeon section, to engage an extra judge, to reduce the membership fee to 1s., and to hold the show on October 26th. It is hoped there will be a big influx of new members this year, writes Mr. J. Logan, the hon. sec.

Leeds Roller Canary Club has decided to join the Leeds Cage Bird Society with their Open Show for 1907, write Messrs. Stephenson and Hornby, the Secs. A most convenient room, in every way suitable for the Roller Club's requirements, has been engaged, and we hope to make the combined show a huge success.

Let me thank you for the very interesting news, etc., which appears in your valuable journal week after week. Though a young fancier, I have benefited greatly by its constant reading, and upon gaining further experience will try and furnish you with a "thesis" upon different matters concerning the Fancy.—G. T. Jones, Brecon.

Messrs. Lupton and Jordan have removed to 100, Lavenham Road, Southfields, Wandsworth, S.W. They are still keeping their position as Secs. of the Bermondsey and District Fanciers' Association. The club has now a 20 mile radius, and communications should be sent to the above address in future.

From the balance-sheet of the Cinnamon Club, which has been sent us by Mr. R. J. Pretty, we find on a turnover of £19 15s. 2d. there is a balance of £4 14s. 4d. The patronage of the club was given to half-a-dozen shows during the season, exclusive of the Club Show at Nottingham, in connection with which the club gave specials value £6 16s. 6d. Mr. Pretty regrets that several members have left the club, and tells us that he is anxious to welcome new recruits to take their places. The club is doing what it can to increase the interest in the Cinnamon, and lovers of the breed should place themselves in communication with Mr. Pretty, whose address is 6, Old Burlington Street, London, W.

Great Horton O.S. Open First Feather Show will be held on June 8th. Judge, Mr. T. Bennett.

Bullie hens were sold Saturday night, and I could have sold another dozen.—A. W. Knaggs, Westgate, Guisboro'.

The first consignment of Ramsden's pure peppers has arrived. They are, without doubt, the finest ever imported. A sample half-pound tin of tasteless sent post free on receipt of postal order for one shilling.—Advt.

Fanciers requiring business notepaper, postcards, etc., should write us for a quotation. We are now in a position to supply these at specially low rates, combined with first-class work. Apply, Manager, Cage Birds, 154, Fleet-street, London, E.C.

At our last meeting Messrs. J. Wilson and W. Clough gave a very instructive washing exhibition, about 20 members and friends being present, who asked numerous questions, which were ably answered. A vote of thanks brought the meeting to a close. A washing competition will be held on May 4th for novices.—F. Sharples, Sec. Gt. Harwood and Dis. C.B.S.

The past year's working of the Birkenhead Canary F.A., judging by the balance sheet to hand, has been most successful, each of the shows made a small profit, and on the general account there is a balance in hand of £3 13s. 2d. The Secretary is Mr. J. T. Harding, 8, Hinson-street, Birkenhead, who will be pleased to give any information concerning the Society.

From Mr. W. Lea, of Oldham, we have received a most ingenious little contrivance for the holding of green food. By its use it is impossible for the birds to drag the food on to the floor of the cage. Mr. Lea is to be congratulated upon the neatness, the usefulness of the holder, and on the ingenuity which he has displayed in inventing and making such an article. Mr. Lea describes it in our correspondence columns.

South country Mule breeders will regret to hear of the death of that veteran fancier, Mr. R. W. Wilkinson, of Dorchester, who passed away on April 19th, at the age of 67. For many years he has suffered from heart disease, and his great solace has been his pets. His remains were carried to the graveside by a number of his railway friends, amidst many signs of deep regret. Many will join with us in our expression of sympathy to his loved ones left behind.

No. 2 of the sixth volume of "Bird Notes" maintains the early promise of the first number, under the new editorship, and is cramfull of most interesting matter concerning Foreign birds. The frontispiece is a most attractive coloured plate of a Hawk-headed Caique which accompanies an article by Mr. Wesley T. Page. "Nesting Notes," by Mr. W. E. Teschemaker, with illustration, is a very valuable contribution; and other items deserving of notice are the new Bird House at the Zoo (by Mr. Goodchild) and "Tanagers" (by Mrs. E. Warren Vernon).

By the courtesy of Mr. V. Wynn, we have been favoured with the winning essays in the recent competition promoted by the City and Suburban Canary Breeders' Association. The officers of the City and Sub. are to be complimented upon promoting such an interesting and instructive competition, whilst the competing members are to be most heartily congratulated upon the very high standard of their papers, as, both from a practical and literary point of view, they are of great excellence. We hope to deal with the winning papers in the near future, and regret that the pressure on our space prevents our doing so this week.

Southern Norwich P.C.

I shall be pleased to receive letters from show managers asking for our support in Champion or Novice sections, to be placed before our committee in June.—F. S. Matthes, Hon. Sec.

The Norwich Plainhead Club.

Some very important business is to come before the committee of the Norwich Plainhead Club at its meeting in Manchester on May 11th. The attention of Show secretaries is particularly called by Mr. Raynes, in his club notice, published in our columns to-day, to the details which must be sent on to him, and to the conditions under which the Club's patronage is granted.

Whose will be the Hundredth ?

The usefulness of our Show dates fixed column as a preventive for clashing, and keeping a cheap continual advertisement of a Society before the public, is now so generally recognised that here in the month of May—practically six months before the Show season starts—no less than ninety-two shows are represented in our list. Who will be the hundredth? That is an interesting question to Secretaries as well as to us, for we shall—to celebrate the passing of the century—give an extra special prize of a bound volume of "The Bird World" to the Show whose guarantee makes the hundredth received and published. Come along, committees, which of you will secure that extra special? The column is certainly unique, and the idea originated with us.

April 23rd, 1907.

"THE KEYSTONE OF THE UNION."

Voting papers on the question of whether Rule 17 shall remain or be deleted, have been sent out to all affiliated societies within the Union. These accompanied the annual report and balance-sheet.

Opinions have also been requested on what is the proper definition of a novice. If any society has not received a copy of the report, etc., through change of secretary or other reason, I will be pleased to forward it on receipt of a post card. The following new Societies have joined the Union:—

Bristol C.B.S.;
Grimsby;
Welsh National;
Wolverhampton.

Licenses have been granted to Redruth, July 3rd and 4th; Mansfield Woodhouse, July 16th; Goole and Dis., July 18th; and Cleator Moor.

G. W. F. Lythgoe.

25, Stamford-street, Old Trafford, Manchester.

OBITUARY.

W. ORME.

We deeply regret to announce the death of one of the staunchest fanciers of Norwich Plainheads, Mr. W. Orme, of Hampstead, on Sunday morning last. He leaves a large family to mourn his loss. He was a member of the London and Counties A.C.B., North London, and of the City and Suburban, and was also a member of the late North Metropolitan C.B.A.

Very pleased with last advertisement re cages. I received quite a pile of letters and postcards.—C. Cook (Wellingborough).

I have not advertised for a fortnight, as I sold the birds advertised in Cage Birds, and could have sold more.—J. Garland, Bordesley, Birmingham.

I find that if I want to obtain any article in exchange I must use Cage Birds, as it is the best medium I have yet found for advertising.—Charles R. Phillips, Wood Green.

From our Correspondence columns, it will be seen that a split has occurred at Kilmarnock, and that a meeting is to be held at the Ossington Hotel, at 7.30 p.m. to-day (Saturday), to form an independent Cage Bird Society.

I have about 30 young ones, Norwich and Mules, all the picture of health. With Linnet and Canary I have five young from five eggs, Goldfinch and Canary, four eggs and four young, and have six Linnet and Canary eggs under hens. My Bullfinch hen laid her first egg on Monday; she is paired to a yellow ticked Norwich. I have 25 more Norwich due in the course of a few days. I regret to say some of our local fanciers are not doing over grand, some losing their young about seven days old, and others much troubled with clear eggs.—C. H. Cooper (West Ham).

OUR FRONTISPIECE.

Cornwall, the pastoral and mining county of the West, is one of the last remaining breeding grounds of that handsome bird the Chough. A few years since there seemed every prospect of the Chough being soon known to us by name only, but latterly it has increased in numbers, owing, doubtless, to the protecting arm of the Wild Birds Protection Act. As a pet the Chough is a most interesting and attractive bird, its cuteness, liveliness, and vivacity making it immensely popular with those who have kept our large British birds in confinement. Upon the show bench the Chough, with its rich glossy suit of black, in striking contrast to its long rich coral-red beak, legs and feet, secures the admiration of all, and is a great favourite, not only with visitors, but also with the judges, who seem unable to get past its attractive personality. Its home is generally amongst old ruins, or the face of some rocky sea cliff. It belongs to the Crow family, of which it is one of the most handsome members, and readily adopts itself to captivity.

MAY "BIRD WORLD."

OUR

CANARY BREEDING COMPETITION.

Received by all with enthusiasm. **NOTE! RULES, 3, 5, 7 and 8.**

With the idea of stimulating the interest of outsiders in the hobby of Canary Breeding, and so provoking new recruits for the Fancy, the Editor of "CAGE BIRDS" has decided to offer £28 in Prizes, including £15 for the most successful Novice Breeder of Canaries, under the following conditions:—

1. Only Novice Breeders are eligible for the Competition, a "Novice" to mean anyone who has never bred Canaries before.
2. The Prizes will be: **A**, Cup, value £5 (or Cash), First Prize; **B**, Cash, £3, Second Prize; **C**, Cash, £2, Third Prize; and **D**, Five £1 Cash Prizes for the next best in succession.
3. Prizes to go to the "most successful" breeders, meaning those of the competitors who are most successful in satisfactorily rearing the best average of healthy young birds during 1907 Canary breeding season now in progress.
4. The young Canaries must be bred by the competitors on or before July 15th, 1907, next. None bred after that date will be eligible.
5. All stock birds used must be the *bona fide* property of the Competitor.
6. Competitors must have the results of their breeding operations attested to by two responsible officials of any recognised Cage Bird Society, or may swear a declaration attested to by two responsible witnesses (form on application).
7. From now till the date of the Competition closing, August 17th, each issue of CAGE BIRDS will contain a Coupon, and when sending in the declaration competitors must enclose the whole series of coupons to show that they have been during the period regular readers of CAGE BIRDS.
8. The Editor's decision shall be final.

Secretaries and Officials of Societies are invited to communicate with our Manager, when a scheme of co-operation by which new recruits for their Societies may be enlisted, will be forwarded.

A Prize offered for the Old Hands.

It has been represented to us that though our Canary Breeding Competition is of vast interest to the raw recruit, the absolute novice, it leaves the experienced hand out in the cold. To remedy this we have decided to offer **FIVE POUNDS** Cash, or Cup to full value, at winner's option, to the most successful Canary breeder of any experience. All breeders of one season's experience and upwards eligible. Same conditions as for Novices. The Editor's decision to be final.

We also invite the hearty co-operation of all readers in the following "rolling" schemo:—

THE "TELL SIX" PLAN.

By simply procuring SIX Signatures you may be able to win £6.

The plan is as follows: All you have to do is to tell six of your friends, unrelated to each other, about CAGE BIRDS' great Canary Breeding Competition, and persuade each of them to enter and tell six of their friends about it also. You send in to us the first six signatures to an undertaking to this effect, and if any of the signers are successful in our Canary Breeding Competition we will award you £1 for each successful competitor nominated by you. If any of the six people you tell fill up our forms as appended with signatures of six of their friends whom they have persuaded to enter, we will award them £1 for each successful competitor nominated by them. If two or more people nominate the same successful competitor the nomination prize will be divided amongst the successful nominators. The nomination forms must reach us by May 27, 1907, and the *bonâ fide* signatures and addresses in full of the competitors you have induced to enter must be given in each case. Here is the

NOMINATION FORM.

We, the undersigned, having carefully read, or had road to us, the rules of CAGE BIRDS' great Canary Breeding Competition, agree to enter for the Competition and abide by the rules of same. We further, each of us, undertake to try and induce six of our friends to enter the Competition and tell six of their friends about it also:—

Full Name and Address.

1. .....
2. .....
3. .....
4. .....
5. .....
6. .....

The above are the *bonâ fide* signatures and the complete addresses of six intending competitors in CAGE BIRDS' Canary Breeding Competition, and I hereby nominate them to win one of your prizes. If any of them are successful I should like my prize money sent to mo addressed as under:—

Name .....

Address .....

.....

Every form sent in, if properly filled up, will entitle the sender, whether a successful nominator or not, to a set of picture postcards, "Dickie in the Dumps."

All forms must be sent in on or before May 27, 1907.

Now you want to know WHY you should adopt our "Tell Six" plan. We will tell you:

1. It will make new recruits for your hobby.
2. It will teach people to look after their pets better.
3. You may be successful in winning one or more of our prizes.
4. The friends you persuade to enter may win one or more of our prizes.
5. The friends your friends persuade to enter may win one or more of our prizes.
6. You may be a novice or an experienced hand; you have still a chance to win a prize.
7. If you are a member of a society you may enlist a new member by means of this Competition.
8. Rich or poor—a lot of birds or a single pair—it makes no difference. All have an equal chance.
9. It will take your mind off your business or private troubles and give you a little spare-time recreation of a novel kind with the chance of making a pound or two.

Roughly and briefly these are the benefits of the "TELL SIX" plan. Follow it up for all you are worth and see how much you can win.

You need not necessarily enter for the Canary Breeding Competition to win one of the nomination prizes. It will be sufficient if a breeder nominated by you on one of our forms is successful in winning one of our prizes. That is to say, if he or she is successful you will be successful. If there is any point you are dubious on, write—

F. CARL, 154, FLEET STREET, LONDON, E.C.

Have you a young friend? Induce him or her to enter for our Great Breeding Competition.

Canary Breeding Competition.
MAY 4th, 1907. Coupon No. 4.

CLUB NOTICES.

No charge is made for notices of forthcoming meetings, but they can only be inserted once. Should secretaries desire to secure immediate insertion of their announcements **exactly as written** they can do so by prepayment at the rate of three words a penny.

Keighley and Dis. C.B.S.—May 7th, at King's Head Hotel, 7.30 p.m. Fixing next season's shows.—Wm. Wright, sec.

Laisterdyke B.F.A.—May 7th, at Royal Oak Hotel, 8 p.m. Important business.—J. Pownall, sec.

Leeds C.B.S.—May 4th, at Lockhart's, Briggate, 7.30. "Mule Breeding," by N. S. Love, Esq.; fanciers cordially invited.—Stephenson and Hornby, secs.

Leicester Hand-in-Hand C.B.S.—May 7th, at White Swan Hotel, 8 p.m. Lecture, "Rearing and Feeding Young Birds," by Mr. J. Needham; all fanciers invited.—C. Draper, sec.

Leith O.S.—May 11th, at Labour Hall, 8 p.m. Selection of judges.—G. Brown, sec.

Leyton and Dis. C.B.A.—May 6th, at Leyton Constitutional Club, High Road, Leyton. Lecture by Mr. G. Gardner, "The Norwich Canary and the Green Blood"; all fanciers invited.—B. F. Forse, hon. sec.

Liverpool B.B.A.—May 9th, at Oldham Hall, Renshaw Street, 8 p.m. "Rearing Young and Colour Feeding."—H. Barratt, sec.

L.C.B.A.—May 8th, at Napier Tavern, High Holborn, 8.15 p.m. Mr. W. Morris will read a paper upon "How I Treat my Birds during the Breeding Season."—T. A. Wade, sec.

Lowestoft and Dis. C.B.S.—May 6th, at Fox and Hounds, 8.30. First Feather Show.—G. Francis, sec.

Manningham C.B.A.—May 4th, at Mowbray Arms, 7.30 p.m.—E. Kemp, sec.

Metropolitan A.C.M. and H.B.—May 9th, at Crown Hotel, Lavender Hill, S.W., 8.15 p.m.—A. J. Head, sec.

Milngavie C.B.A.—May 30th, at Newton Vaults, 8 p.m.—M. Frame, sec.

Morriston and Dis. C.B.S.—May 11th, at Woodfield Coffee Tavern, 7.30 p.m.—D. Jeremy, sec.

Norwich Plainhead Club.—May 11th, at the Deansgate Hotel, Manchester, 4.30. Committee meeting to consider the coming contests with Scotland and the southern Plainhead clubs, to select places for the club show or shows, the cup competitions, prize money at these shows, and any other business. Will secretaries of those societies who are thinking of applying for patronage from the club, send in the following particulars:—Date, name of judge, and number of classes in open Norwich competition, and to state what they want. Fourteen classes are required for a club show; eight classes for cup competition. All societies must be under C.B. rules and give not less than four money prizes in each of the Norwich classes, cage birds only, and engage a N.P. Club judge.—J. Raynes, hon. sec.

Ormskirk and Dis. C.B.S.—May 6th, at Buck i'th' Vine Inn, 8 p.m. Mr. G. Johnson will read a paper on "Consanguinity, and How to Build a Strain from One Pair of Birds."—T. H. Tiffen, hon. sec.

Pendleton and Salford O.S.—May 9th, at Derby Arms, Oldfield Road, 8 p.m. Resignation of Secretary and election of new one.—S. Skelton, hon. sec.

Preston O.S.—May 7th, at Empress Cafe, 8 p.m. First Feather Show; annual ramble.—J. W. Clemmison, asst. sec.

St. Helens O.S.—May 6th, at George Inn, 8 p.m. All members are most urgently requested to attend.—T. Vose, sec.

Sale Open O.S.—May 6th, at Sale Hotel, 8 p.m. Show of British birds; two Softbill and seven Hardbill classes; judge, C. C. Blackshaw.—Geo. F. Hardcastle, sec.

Seaham Harbour and Dis. C.B.B.A.—May 4th, at Station Hotel, 7. To discuss route for ramble.—J. M. Nicholsou, sec.

Shields and Dis.—May 8th, at Gregg's Cafe, 7.30. Payment of subscripitons; local fanciers invited to join.—Wm. Duke, sec.

Shipley O.S.—May 7th, at Victoria Hotel, 8 p.m. Members' First Feather Show, etc.—H. Dobson, sec.

Southend and Dis. O.S.—May 8th, at Alexandra Hotel, 8 p.m. First Feather and Annual Show dates and judges for same; the adoption of society manual for 1907 and seed and bird room requisites. All fanciers wishing to join cordially invited.—J. Dobson and W. D. Franks, hon. secs.

Southend-on-Sea F.A.—May 7th, at Victoria Hall, Alexandra Street, 8 p.m. Confirmation of schedule.—B. P. T. Jones, sec.

South London C.F.A.—May 8th, at the Royal George, 8 p.m. Specials and specialist judges at Annual Show.—G. A. Jefferys, sec.

Southport and Dis. C.B.S.—May 16th, at Thorpe's Rooms, Neville Street, 7.30 p.m.—E. Riley, hon. sec.

South-West London C.B.S.—May 9th, at Plough Hotel, Clapham Junction, 8.30. Young Bird Show.—W. Lilley, hon. sec.

Stockport B.F.A.—May 7th, at Boar's Head Hotel, 8 p.m. Special business.—W. Stafford, sec.

Sunderland C.B.A.—May 11th, at Fawcett Street Cafe, 7.30 p.m. Schedule for Open Show; schedule for First Feather Show; and specials.—F. W. Gordon, sec.

Swansea and Dis. C.B.A.—May 9th, at Oxford Coffee Tavern, 7.30. Arrangements for First Feather Show.—Alf. Hitchings, sec.

The Original Crook Cage Bird Society wish brother fanciers to know that we have added rabbits and pigeons to our Open Show, and have a good balance in hand and about double the members to previous years. Specialist judges engaged. Present Secretary, Arthur Bowes, Wilson Street, Crook. Next meeting on May 4th, at Crown Hotel.

Walthamstow F.A.—May 9th, at Working Men's Hall, 8 p.m. Members' Shows; prize money and specials won at Members' Shows; finance.—C. W. Mead, sec.

Wath and Dis. C.B.A.—May 5th, at Cross Keys Hotel, 7.30 p.m. Forthcoming show business.—H. H. Bramham, sec.

Wimbledon and Dis. C.B.S.—May 6th, at 6, The Broadway, 8 p.m. Paper by Mr. J. Robson; judging competition on Mules.—W. H. Colman, sec.

Windhill, Shipley, and Dis. O.S.—May 4th, at Blue Bell Hotel, 8 o'clock. Members' Shows, etc.—E. Broadley, sec.

Oswestry Show has been fixed for Oct. 31st, so writes Mr. G. A. Doody, the Hon. Sec.

The new Secretary of the Barrow C.B.A. is Mr. W. Willison, 17, Cameron Street, Barrow-in-Furness, to whom all communications should be sent.

Your Novice Breeding Competition is a capital idea for encouraging our hobby. I shall be only too happy to give you all the help I can in moving the scheme.—CHAS. J. MULLIGAN, Sligo.

I hope your competition will prove a huge success. I am getting five young fanciers who have done no breeding before to go in for it.—JAS. A. IRVINE, late Sec. City and County of Perth O.A.

From Mr. Jones, of Walton, Liverpool, we have received samples of the seeds which he is advertising in our columns. They are sound, bright and full, and appear good value for the price charged.

Our Mr. Wallace is shortly sailing for Australia. We visit Australia annually for the purpose of collecting birds, and we are prepared to collect even single specimens. Quotations can be given before the acceptance of the order.—PAYNE AND WALLACE, Ltd. (Bath).

Mr. House has kindly offered to tell the members what he knows about Yorkshires at the London and Counties meeting on Thursday next, the 9th inst. All fanciers and others interested are cordially invited to the "Bay Malton," Great Portland Street, that evening, at 8.30 p.m., writes Mr. R. J. Pretty.

The judges for the Kelty and Blairadam O.S. Show, on October 19th, are Messrs. D. Black (Scots), D. A. Craig (Variety), A. Cochrane (British and Foreign). There will be no cancelling of classes this year, so Mr. Hunter informs us; and that Mr. Arnott, 73, Adam's Terrace, Kelty, will act as cage bird secretary.

I have started this year to try my luck at Canary breeding, having never kept any before. Could you tell me if there is a C.B.S. in this town?—W. H. GOODAY, Colchester.

[We have never heard of a C.B.S. in Colchester, and should advise you and the friends you mention to start one. Forms will be issued later, when one shall be sent to you.—ED.]

W. A. LOTT,
Heraldic Artist & Illuminator.
Congratulations, Addresses, Votes of Condolence, etc. artistically executed in all colours, with borders, framed complete, from **20/-**, post free. Address:
97, CHEAPSIDE, LONDON, E.C.

QUESTIONS & ANSWERS

DOUBTS AND DIFFICULTIES SOLVED BY SPECIALISTS.

Queries will be answered under the following conditions:—

(1)—*All questions must be clearly written in ink (or typewritten) on one side only of paper, and must conclude with either the correct name of querist, or a pseudonym, or initials.*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper and enclosed with the query. In no case must the address appear on the query.*

(3)—*Queries intended for different specialists must not be written on the same sheet of paper.*

(4)—**Queries must not include** *or be included in orders for books, instructions re advertisements, or any other matter for publication.*

(5)—*The department to which the queries refer must be stated in bold letters on the left-hand corner of the query.*

(6)—*If an answer in the same week's issue is desired, queries must be posted to reach us by* **Monday's first post** *at latest. Queries will be dealt with in the order in which they are received, and only as space permits. The earlier queries are received the better attention they are likely to have.*

(7)—*Queries relating to illnesses of birds, except enquiries as to cause of death (for which see Post Mortems) will be answered by return of post on receipt of a postal order for sixpence and an addressed stamped envelope. Queries of an ordinary nature will be answered by post, if desired, on receipt of a postal order for one shilling and a stamped addressed envelope.*

(8)—*All who require letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence to pay postage expenses, &c., otherwise their letters will not receive attention.*

(9)—*All queries must be addressed* **the Editor, "Cage Birds,"** 154, *Fleet Street, London, E.C. Only queries so sent will be answered. Postcards are not admissible.*

NOTE.—Readers are requested to carefully study past numbers and current issue before submitting questions. By doing so they may save trouble and unnecessary repetition.

THE following gentlemen represent CAGE BIRDS staff of **ADVISORY EXPERTS.** Queries must in no case be addressed to any of them individually, but to the Editor.

Norwich Plainheads.—**J. H. Payne.** Yorksbires.—**H. W. Battye.** Crests & Crestbreds—**W. E. Greeves.** Cinnamons — **J. North.** Miscell. —**"Old Judge."** Border Fancies—**J. Weston.** Foreign Birds—**Wesley T. Page,** F.Z.S., M.B.N.H.S., &c. Park and Lake Aviculture—**Frank Finn,** B.A., F.Z.S., M.B.O.U., &c. Wild Bird Life—**H. Norman.**

CANARIES.

NORWICH PLAINHEADS.

Answered by J. H. PAYNE.

Price of Bird.

F. Hoskins.—No, you have not paid too much for a big yellow cock. Ten shillings is a small price, and if you got a yellow instead of a buff you may consider yourself lucky, as yellows are more valuable and scarce than buffs. There is nothing unusual in a cock carrying nesting material about, and I should say you have no doubt got a cock. You say it sings strong, and commenced to sing as soon as you took it out of the travelling box. No hen would do this, so you may rest your mind contented that you have secured a cock. Instead of the Hartz Mountain Bread, give a little crushed biscuit and hard-boiled egg, well mixed, two or three times a week. Your room is rather cold at present, but I have no doubt it will be quite warm enough as the summer advances.

A Fighting Cock.

Ferocious.—I think if you put one of the hens in the cage with the wire partition, and allow them to remain for a week, that he will pair up to her. Perhaps you only had them like this for a day or two. You have, I fancy, got him in a very rank state by your high feeding, and I think you had better discontinue it for a little time, but feed up the hen as much as you like, as the fresher she is when you run her into the cage with the cock, the better chance there will be of a happy union taking place. If he should still fight the hen, do not take him away, unless he should pull her about enough to injure her, as I have had plenty do this for a day or two, and afterwards settle down and live a peaceable married life.

Wagging Like a Pendulum.

Troubled.—The bald place on the back of the neck of your Norwich hen is no doubt caused by surfeit. Put on the bare place a little sulphur ointment two or three times, and this will probably cure it. For the hard breathing which you say you only notice at night, give in its drinking water every day for a week, and after on alternate days for a fortnight, ten drops of syrup of tolu and ten drops of paregoric, well mixed.

A Cock Bird Off Song.

W. Milburn.—Your bird is evidently right out of sorts, no doubt caused by his having cross moults, and I fear he will not be at for breeding for some little time. Give him in his drinking water for a fortnight, fresh daily, ten drops of tincture of quinine, and three times a week let him have a half teaspoonful of egg food, to which add six drops of Parrish's Chemical Food. Occasionally give him a piece of sponge cake, over which put a few drops of best sherry or good old port wine. You may give him a leaf or two of dandelion two or three times a week.

Bird Coughing.

Charlie.—You are feeding your bird far too generously, and I do not wonder at his sitting, as you say, on his breast nearly all day long. Stop the milk sop and sugar, hemp and linseed, and feed on plain canary seed. You may give him a little egg food as you are doing, and continue with the dandelion leaves. You may also give him occasionally a sprig or two of watercress. As you say he coughs a little, you may continue with the medicine for a few days longer, when discontinue. I think you will find when the weather gets a little warmer that he will get all right again and you may then let him have a bath. Personally, I do not know of an insurance company that would insure your stock and appliances, but I think if you were to write a short letter to this paper asking the question, no doubt some reader would tell you if there is such a company in existence.

Hen Says, "Tiss, Tiss, Tiss."

W.P.—Give your hen, in the drinking water, every day for a week, and afterwards every other day for eight or ten days, 15 drops of syrup of tolu and ten drops of paregoric well mixed. There is no reason why your hen should not breed Goldfinch Mules in an ordinary cottage kitchen, as I have known many so breed; but if I were you I would remove them to the bedroom when the weather gets warmer. You will then be in plenty of time for Mule breeding. Give the hen a little egg food twice a week, to which add six drops of Parrish's Chemical Food, and let her have a leaf or two of dandelion two or three times a week.

Egg Binding Extraordinary.

W.R.S.—I certainly think if you have, as you say, a ben Canary that has been egg bound for a month, and is now getting well again, it is a most unique case, the like of which I have not met with in all my experience. You seem positive the swelling is not a growth of any kind, and think by the shape that it must be an egg; but I must say I have no doubt that it is a growth of some kind, probably a tumourous one, or else the hen is ruptured. All the hen Canaries that I have seen egg-bound have died within a comparatively short time if they have not been able to pass the egg. If you are living within easy distance of an experienced fancier show him the hen, and I should be pleased to hear what he has to say about the case.

Whose Fault is it?

J. J. Islip.—As you say your No. 2 pair had 14 clear eggs last year, and this year has started by having four more clear, I am of the opinion that the cock is barren. The hen is most likely by now ready for nesting, therefore you may try him once more, and if the eggs are again clear, I should advise you to discard him, and sell or keep him as a songster. Many cocks will do as yours does—sing heartily when taken away from the hen, but while with her will not sing a note.

Hen Refuses to Sit.

Crest.—Your Norwich hen had most probably paired up to the Yorkshire cock, which would account for her not taking to the Norwich cock and fighting him. The egg you found on the cage bottom broken was probably dragged out of the nest by accident. If you removed the remaining eggs, and put them back again after an interval, she would not sit on them, as she would have gone off her broodiness. I think you will do well to give her another chance. Your feeding is quite correct.

YORKSHIRES.

Answered by H. W. BATTYE.

Good Results.

Trumpeter.—Glad to know that your one year old cock, that you used in place of the two year old one, is likely to prove a success, and hope the eggs will batch out, and the young be reared as well. You should in the future replace the eggs any time after noon on the day the hen has laid her third egg, and she will probably stick to the nest and go straight on with her sitting the following morning, and hatch her young ones all at the same or nearly at the same time. You say you have paired the two year old cock to another hen, but you are not quite satisfied with him, though he is in full vigorous song. Well, if this is so, I don't think you need fear the result, as when the hen gets into ripe breeding condition she will call for him, and I have very little doubt about him responding to her call. You might with advantage substitute maw seed for the niger in the mixture you name.

Hen not in Form.

Black Cat.—Let your hen have white canary seed only in her seed bopper, and give, in addition, on alternate days, and on the days you do not give the egg food, a small teaspoonful of the following mixture:—Two parts summer rape, one part niger, and one part maw seed, also give daily two or three young and tender leaves of dandelion, washing them well under the water tap. To be sure they are not frosted keep them in the house for an hour before giving to the bird. For one week put eight or ten drops of syrup of buckthorn in the drinking water, fresh every morning, and after that substitute ten drops of Parrish's Chemical Food for the syrup of buckthorn. With the above treatment, and the milder weather which we should shortly be having, I think you will get your hen into breeding condition by the middle or latter end of May.

Change of Rooms.

Avon.—Your buff hen may have had a chill owing to change of quarters. It is best when at all possible to have the hens you intend to use for breeding in your room by Christmas, then the risk of their going wrong owing to change of rooms and living under different conditions is avoided. You say the hen does not show any signs of wanting to nest. I suppose you have a cock bird in the same cage, but you do not say so. I advise you to do as follows for two weeks. Each evening take away the birds' drinking water, giving it fresh each morning, and well mixing six drops of the following mixture into the water:—Two parts oil of eucalyptus, one part oil of cajapat. Take the cock away at night when you remove the drinking water, and return him about noon each day. Give the birds a full teaspoonful of egg food, and a little maw seed daily. For seed diet give plain white canary seed in hopper, and a good mixture to be given as a change or tit-bit two or three times a week is as under:—Two pints of summer rape, half pint hemp, half pint maw, half pint niger. Give a good supply of gritty sand regularly.

Insects or Surfeit.

Roman.—Put your bird on plain white canary seed as a staple food, stop the hemp, and give a little maw seed twice a week in a separate vessel or on the cage bottom, also give a sprig of watercress daily. Perhaps your bird is infested with the redmite. You might try throwing a thin white cloth of some kind over the cage, and examine it closely early in the morning, when, should you find any on the cloth, dust the bird with insect powder two or three times. A day or two after dip the end of your finger in paraffin, and daub lightly the bare place every two days for a week. If it is not the red mite that is causing the trouble, then I should say the bird has very likely been overfed on too stimulating a diet, and should advise putting a pinch of epsom salts in the drinking water, sufficient to make it taste, taking the water away at night and giving it fresh in the morning. Try this for four days, and then give him clean water fresh daily.

Blue in Beak.

C. King.—From your description of the birds, and the sudden way they fall ill, I am of opinion that something is radically wrong in what they eat or drink, but as you give no particulars either in regard to how you feed or manage them, I have not much to assist me in forming an opinion as to what is the matter. You just say you have a lot of birds in full song going into a moult and turning blue at beak, and dead within two days. It seems to be a severe case of inflammation of the bowels. Catch the next bird you have ill, blow back the feathers above the vent, if the skin is of a dark red or purple colour, and the belly seems swollen, get a little turpentine, dip a bird's tail or flight feather into it, and gently paint the bird on the inflamed part. This will make the bird squirm for about ten minutes, but will be of great benefit. Scald a little bread in boiling milk, afterwards squeezing out as much of the milk as possible, add a little moist sugar, and then mix well among the sop, as near as you can calculate, eight drops of syrup of buckthorn to each teaspoonful of sop, sprinkling a pinch of maw seed over the lot. Feed all affected birds as above for one week, giving nothing besides, except plain white canary seed, then for another week substitute a little egg food for the milk sop, and to each teaspoonful of egg food mix six drops of Parrish's Chemical Food. Boil all the water you give either to drink or bathe in. Add a few drops of brandy, or good whisky, six or eight drops, say, in their drinking water, will probably do good. I should also advise you to send the next bird that dies to Mr. North for examination, enclosing proper fee, for which see "Post-Mortems," in this week's CAGE BIRDS.

CRESTS AND CRESTBREDS.

Answered by W. E. GREEVES.

Crested Cock Canary in Soft Moult.

From India.—If your bird is losing its feathers, it is in what is generally called a soft moult, which means that it is moulting other than at the proper time, and is more often than not caused by excessive variations in the temperature, i.e., taken from a warm place to a cold one or vice versa, or it may be from a sickly disposition. Keep in a fairly warm spot, free from draughts, covering the cage over at night. Feed liberally; give canary seed as its staple food, egg food three times a week, and good sound German rape every other day; sprinkle a pinch of maw seed on the bottom of the cage once a week, after the cage has been cleaned out. To the water add a pinch of sulphate of iron for two days and miss one; continue on in this way for a fortnight. It is just possible that it may moult again at the proper time, if so it would be late. (2) Your bird had a fainting fit, which is nothing very unusual with very nervous birds, especially when being caught. Catching it once a day, and giving direct into the beak one drop of Parrish's Chemical Food for a week, I have found invariably effect a cure. Do not hold the bird in your hand longer than you can possibly help.

CINNAMONS.

Answered by J. NORTH.

Egg-bound Hen.

(1) What diet to put her on? (2) Will she need a tonic? (3) Can I breed with hen this year? (4) Will the cock want another mate?—F.O.

F.O.—(1) If your hen has not laid her eggs, you must help her do so by holding her over a jug of steaming hot water, putting her, for this purpose, into a linen bag or lightly made basket, and a drop of olive oil in the vent. Keep her in a warm place, and feed on bread and milk sop, sprinkled with mixed seed, but give no green food while there is any sign of inflammation. (2) During her illness give ten drops of the homœopathic tincture of aconite in two tablespoonfuls of her drinking water. (3) Under the above treatment she will probably recover in about a week, and can be tried again when (4) the same cock bird can be run with her again, so I do not see that another hen need be sought.

BORDERS.

Answered by J. PATTERSON.

Pairing for Markings and Colour.

C. Williams.—If you had given me the colour and markings of the parents as well I should have had more guidance in giving you reliable advice. We may arrive something near what you may expect from any given pair, but no one can tell exactly how any pair of birds will throw. We pair them up to breed us champions, but very often we are sorely disappointed; especially does this refer to breeding marked birds. We must always remember that we have Nature to contend against, and must just take what she is in the mood to send us. From No. 1 pair I should think most of the progeny will be heavily-variegated, with a few greens in each nest, unless the parents of above came from greens the greens bred will nearly all show light in throat, down breast, and perhaps a few light feathers in tail and wings. From No. 2 pair you should get a few good marked birds, some variegated; but the result greatly depends on the amount of dark blood in their veins. From No. 3 pair both clears, fouls, and lightly-marked birds. From No. 4 all clears, unless any dark blood, when you may expect a few foul-marked. From No. 5 you may expect the same as No. 2. From No. 6 clears, but I do not care for double yellow breeding, unless for stock purposes; it has a tendency to throw birds slim in front and a little open in feather. Unless your birds are nice and plump in breast and of good quality, you should run No. 3 buff cock to her, No. 6 yellow cock to No. 8 buff-marked hen, and No. 4 cock, as you say, to No. 7 hen. I think you have them very well paired up to produce all varieties. You want both clears and greens, but why not go in for marks as well? They are far and away the most handsome variety. (2) Give the cock bird, in drinking water, fresh daily, for a fortnight, ten drops of the following mixture: 1 oz. each of glycerine, whiskey, and syrup of squills, mix well in a bottle and keep for future use. See he is out of all draughts. Give a young dandelion leaf fresh every morning.

Feeding Weary Hens.

M.S.T.—Your feeding is quite correct, with the exception that you might add to the first egg in the morning 4 oz. scalded German rape, prepared as advised to "Novice" in last week's issue. You should also give the green food early in the morning. Some hens are very fond of green food. You ought to study each pair, and try as far as possible to suit their tastes. Add to their last egg 1 oz. maw seed; this seed is a grand pick up, and helps to take away the wearied feeling you say your hens are subject to. Take note of their droppings; see if they are thin and watery; if so, let each hen have a piece of sulphate of iron in the water for a day; also a piece of milk sop with three drops sherry wine mixed through it. (2) There is no doubt the cold changeable weather is to a great extent the cause of your failure, and when once the better weather comes you will have better luck. Don't disturb them unless necessary.

ROLLERS.

Three, including a Phonograph.

H.S.—(1) It is quite easy to make mistakes as regards the fertility of eggs. The eggs you mention as looking quite dark were doubtless fertile enough, but from some cause or other the chicks died in the shell. You should have tried them on the fourteenth day by immersing them in warm water; if alive inside the eggs would have moved about. Get a good book on Canary breeding from this office, which will explain all these things to you, and put you right in the future. (2) It will be best not to put the cock back now until the youngsters are 28 days or so old. Get them well and safely reared before venturing on round No. 2. If the cock is well behaved, however, it is not absolutely necessary to remove him at all; or he can be put back when the young are three days old, when he will usually take to them and help rear them. The book mentioned would also explain all about this part of the breeding operations. (3) I have never heard of any phonograph record having been taken with the full song of a champion performer on it. If I am wrong on the point, some reader will no doubt say so next week. I agree with you that it would be very handy for those unable to hear or buy a really first-class contest singer. The vibration and "ring" in the tone, however, would put the phonograph out of court as a teacher of young birds; I should think so, anyway. It is an interesting idea, though.

Seed Sample & "Bandmasters."

The sample of rape is genuine German summer rape seed. I like to see it a little darker in colour (more bluish-purple), but except for this I have nothing to say against this sample, which is quite suitable to give to any bird. "Bandmasters" and "schoolmasters" are trade terms only; they are supposed to indicate a specially proficient singer, and no doubt do so when the dealer is straightforward. Do not run away with the idea, though, that a bird so named is a sure contest winner. No. 1 Rollers is the trade term for the highest-priced imported birds—not necessarily "contest" birds, for genuine singers of the highest class are not to be had in hundreds, or even scores. You should be able to get a first-class ordinary Roller for from 12s. 6d. to 20s.; an exhibition songster might cost anything from 40s. to £10, according to variety, quality, and purity of song. Anyone selling a genuine trained exhibition specimen ought to be able to specify the tours it sings. I ought to add, perhaps, that I have known birds costing but 20s. or so go and win prizes at Roller singing contests.

MISCELLANEOUS CANARY QUERIES.

Answered by "OLD JUDGE."

Breaking Kitten to Bird Room.

T. Ellis.—Whenever you go into the bird room take the kitten with you, and let her see the birds. Should she make any attempt to fly at them, catch her gently, talk quietly and reprovingly to her, giving her a few gentle pats on head and neck. Then, not to terrify or frighten her, hold her in your arms and talk quietly to her whilst you let her look at the birds. If she grows up amongst the birds in this way she will become accustomed to them, and regard them as friends. Treat her kindly, and on no account use cruelty. I have trained several kittens in this manner, and they have proved most trustworthy.

Lump in Throat.

Canary has lump under its throat, which is very hard and inflamed. Can you give me any treatment, or must I kill it?—F. GREENHAM.

F. Greenham.—Whilst there is life there is hope. Never kill a bird unless you find the disease it is suffering from is incurable. In this case paint the lump each day for three days with tincture of iodine, using a small camel-hair brush for the purpose; miss three days, then paint again, and do so every other day whilst the skin remains unbroken. Immediately the skin shows signs of breaking stop the painting. Mix equal parts of glauber salts, Epsom salts, and common salt, and put sufficient in the drinking water each day to make the water bitter to the taste. If there are signs of diarrhœa, miss a day or two. Write me again as to results.

Colour-Feeding Buffs and Yellows

Downhearted.—The same colour food will answer for both buffs and yellows. I am very sorry to hear of your bad luck with your birds. You should give the egg food every day, and the hemp seed three times a week. Your general management seems to have been most excellent, and it is difficult to account for your ill-luck, unless it is the weather. Your letter is not in keeping with your nom de plume, and I can hardly believe you are downhearted. However, I give another bit of advice. Never say die, and if at first you don't succeed, try, try again.

Nestlings Dying.

Payn.—I am quite at a loss to account for the death of your birds. The sample of food you send is sound and sweet, and could not possibly have caused the death of your birds if it had been fresh made. The food should be fresh mixed three times daily. If this was so, you must look for the cause of death somewhere else. The stomachs of newly-hatched birds always look very full and red. Do you think your seed is at fault, or the green food? You give me so few particulars that I am afraid to advise, but of one thing I feel certain the mixture is not to blame.

Aviary in Garden.

H. Bowen.—The house which you describe should answer your purpose very well indeed if you have roof, as well as the sides, double boarded and packed with sawdust, and then covered with galvanised iron. It should be raised quite eighteen inches from the ground, so as to avoid all possible risk of damp and vermin.

Yorkie does not Love a German Lass.

My birds will not pair. Had them separated once, but it has made no difference. At night he is on one perch and the hen on the other; the hen seems to follow him about, but he flies away when she comes near. I feed on eggs and bread, Spanish canary, German rape, and inga seed, mixed, and green food. He is a Yorkshire; she is a German.—M.O.N.

M.O.N.—It may be your Yorkshire boy has an aversion to things "made in Germany," and this is the reason why he will not pair. Are you quite

sure your birds are cock and hen? If they are, the action of the cock is difficult to understand. It is possible you have paired two hens, or two cocks, and that is the cause of the trouble. If it is possible, I should try each of them with another mate. Your feeding is all right, except that the inga seed should not be mixed with the canary and rape, but given separately every other day, either in a separate vessel or on the cage bottom.

Non-Feeders.

(1) Hen has five young, won't feed them, or let cock, which is a good feeder. Would it he hetter to separate them next time? (2) Another hen top of beak sore and bleeding; can I put anything on to heal it? (3) How long could I keep eggs before setting them? Have good Yokshire hen, hut she is a bad feeder, and I want to give her eggs to another hen not laying at the same time.—M.W.

M.W.—(1) Your hen evidently helongs to the New Woman order, hut it is quite possible that if you take away the cock she may feed the young herself next time. If she does not the only thing you can do is to either hand feed or else give to other hens hatching about the same time. In any case, if the eggs are valuable I should not trust her with them, hut give them to a reliahle hen of lesser value, and chance the eggs of the inferior hen with this one. (2) Wash the sore place twice a day with a solution of Jeyes' Fluid. Dry carefully, and apply a little of Taylor's Cimolite, which is a healing powder obtainahle from any chemist. (3) Eggs can he kept eight or ten days without much risk; they should, however, he turned each day, so as to avoid the chance of the yolk heing displaced.

Eggs Disappearing.

A Woman.—I am inclined to think that your birds have pulled the eggs out of the nest, aud they have been broken on the cage hottom. Did you clip their claws before mating? If not, do so at oncc. It is no use your putting the eggs hack now, the desire to incuhate will have long since left your hen. I should advise you to remove the nest for ahout a week, then replace it, and give the hirds plenty of nesting material. The hen has probahly plucked the cock hecause you did not give her something else to play with. I should advise you to stop the niger seed now, and only give the hemp every other day, until such time as you have young birds which are heing weaned, then you may give it daily.

Young Dying.

(1) Nest of two young died when twelve days old. Parents seemed to feed well, and hen brooding them when found dead. Same pair reared nine young last year and did not lose one. Fed on egg food, with ordinary seed, hemp, crushed. (2) Hen with three young did not sit on them after ten days old. "Is this usual, or how long do they sit on young as a rule?—C.M.G.

C.G.M.—Such luck is very disheartening, but it is what many hreeders experience each season, and no one seems to be ahle to say why. It is quite possible in your case that you have heen feeding too generously. I don't care ahout crushed hemp for birds so young. It is asking their digestive organs to do work harder than they have the necessary strength to perform. (2) Some hens hrood their young longer than others, but it is not neccssary for them to do so, at the age you mention, three strong healthy youngsters will keep each other warm. As to the hen, if she is lively and well, and feeds her young, don't worry, but let well alone.

Hen on Cage Bottom.

My hen, paired ten days ago, laid oue egg on hottom of cage, would not use nest pan, and is sitting on the one egg.—NOVICE.

Novice.—Hens will sometimes lay and sit on the floor of the cage out of pure cussedness, but I hardly thiuk that is so with your hen. From your letter. I am inclined to think shé was not in good condition—in other words, not ready for breeding. A hen which was such a good hreeder last year should, if fit, have made a better start than your hen has done. I should advise you to take the egg away, remove the cock hird, feed the hen generously for ten days or a fortnight, then let them go together again. In the meantime I would suggest you give the hen 30 drops of Fellowes's Compound Syrup in her drinking water each day. Give her egg food daily, three times a week a little hemp or inga seed, in addition to her regular supply of canary seed.

BRITISH BIRDS, MULES AND HYBRIDS.

Answered by G. E. Weston.

Wild Seeds.

A.E.C.—The screeniugs look all right, so far as they go, hut lack variety. They seem composed of nothing hut "bird rape"—that is, the seeds of various plants of the *Brassica* group. Again, there is intermixed with the seeds a much too heavy proportion of "chaff" and similar waste. A grain or two of corn makes no matter; in fact, is eaten with relish hy many British birds. But straw, of course, is different. Possihly many seeds have heen lost in the screening. Still, the residue from threshing machines varies very considerahly in its composition, according to the locality it comes from, and to the working methods pursued hy the farmer. Your sample would no doubt be picked over with relish by Linnets, Greenfinches, Redpolls, and Chaffinches.

A Prospective Breeder.

X.Y.Z.—I cannot quitè make head and tail of your letter, as the saying goes. Do you mean that the Linnet and the Canary are flying at present with other hirds in your indoor aviary, 3 ft. by 2 ft. by 2 ft.? If so, there can bc no certainty that the Linnet will be her mate; her affections will doubtless be monopolised hy the most vigorous and self-assertive male bird the aviary contains. But such an aviary as you describe is only large enough for one pair of birds. You can't expect to be very successful in your hreeding operations while it contains a mixture of spccies. If your Linnet is in real hreeding condition, I know no reason why he should not make the hen a satisfactory husband. Let them have a home "on their own," though. (2) This question is answered in the foregoing onc, hy the statement that the aviary is only large enough to accommodate one hreeding couple. Chaffinches are very difficult indced to breed in cages. Further, all-wire aviaries are not the most suitahle of placcs to try to breed birds in, no matter what kind of hirds they may be.

The Mating of a Goldfinch.

A. G. Pattison.—A Goldfinch which was a Greypate last ycar, and is now very steady and in full song, is just the sort of hird to try for muling pnrposes. If you mate him with a dark green hen Canary, you can only expect to breed dark Mules; but they should he good ones if she is a hen of nice size and shape and very rich in colour, especially if she is a jonquc. The time to pair up is when one's birds are ready. I have very frequently explained this during the last few weeks. Hang the couple where they can see each other, and when the hen shows signs of being anxious to huild, run the two hirds together. The Finch should be shut off at night when eggs are expected. The hen should be left to sit and bring up the young alone. You are feeding quito corrcctly. Let the Goldie have a free run at dandelion, hoth young leaves and flowering and seeding heads.

A Mixed Bag.

Cantab.—(1) As you say you have successfully hand-reared the Spotted Flycatcher and hoth species of Whitethroat, you certainly ought to find little difficulty in hand-rearing a hrood of Nutbatches. The same food (though you do not meution what it was) would be certain, I should say, to answer admirably. It is the custom of Nuthatches to plaster up the entrance to the nest with mud or clay. (2) I could not say whether any other keeper of Softbills has tried Plasmon powder. I hegan experimentiug with it personally some four seasons ago, but circumstauces since have not afforded me all the opportunities I should like for testiug it. I favour its usc strongly, both when hand-feeding and for adult insectivorous hirds, especially the very delicate spccies. For adult birds, a suitable proportion would be the admixture of a large teaspoonful with a teacupful of the stock food. At some future date I shall have something further to say on the use of this powder. (3) This question was answered last week; see reply to "J.H.H.," second query. (4) I cannot lay hands on the wild seed sample at the moment. I seem to have mislaid it amongst my papers. Will hunt it out later and tell you its name next week. Probably it is charlock, seeing that your Linnets are so fond of it, aud that it grows plentifully in your neighhourhood. It is certainly worth while gathering.

Brevities.

Thrush Ailing (E.T.).—Your questions were hoth answered last week; see replies to "Perplexed" and "W. Horsfall." Also peruse another reply on the feeding of Thrushes this week, and amend the diet of your own bird—hotter food, not medicine, is what it needs.

Cross-billed Magpie (B.E.B.).—The only remedy is to get someone to hold the bird firmly, yet gently, while you, with strong sharp scissors, trim down the over-grown beak to its proper size. Or a pair of sharp nail-clippers would answer, afterwards using the file, if necessary, to smooth off any rough edges. It is not at all dangerous, and you need not fear the loss of your pet. Give him something to knock about—that is, exercise his beak on. A slightly-cracked bone containing marrow would occupy him for hours, and such things help to keep the heak in condition—at a proper length, that is to say.

Linnets Breeding in Captivity.

Will Linnets hreed in captivity? I have a pair in a hreeding cage, 24 in. long, 14 in. high, and 11 in. wide. What food shall I give them to bring them into hreeding condition?—BEGINNER.

Beginner.—Yes, a well domesticated pair of Linnets will often reproduce their kind in captivity. An aviary is a far more likely place for them to breed in, however, than a cage. Your own cage is of nice size, though, and the two Linnets, especially if very steady, may take to it successfully. It would be better 3 ft. long instead of 2 ft., but the height, 17 in., and width, 11 in., are excellent. Your birds will come into hreeding condition in due course, if well fed and looked after. The chief item is to gather them all the dandelion, shepherd's purse, chickweed, and groundsel you can lay hands on, so that they may have a liheral supply every day. The flowering and seeding portions of these green foods are the parts you need to he most particular in supplying. When giving leaves—as in the case of dandelion—strip off all the old, stringy one, and offer only the young, tender ones. As a stock mixture give the following: Canary three parts, teazle two parts, summer rape and charlock one part each, and hemp and linseed half part each. Also mix niger and maw seeds in equal parts, and give a teaspoonful every other day, giving in between a dessertspoonful of a good wild-seed mixture. Some fine samples of the latter are now on the market, containing gold of pleasure and other useful weed seeds. You can try them with a little egg and biscuit, liberally sprinkled with maw seed, though very probably they will not eat it. Do not expect them to think of nesting yet awhile.

A Glorious Thirst.

I beg to call your attention to a grey cock Linnet that lately has acquired a habit of drinking a lot of water. I fill the drinking fountain first thing in the morning, and by 4.30 in the afternoon it is empty. Kindly say if this is unusual, or can you advise?—TEETOTAL.

Teetotal.—It is curious your query should come on top of the answer given "Winter" last week. I must ask you to refer to that, for I quite expect the water disappears from the tin to, apparently, provide "amusement" for the Linnet, in the manner there described. I suppose there is no hole in the tin? Get an ounce of tincture of gentian from a chemist, and mix a few spots with the water, enough to make it taste hitter; this may break him of the habit, and cannot do harm. I presume the Linnet is in good health? Birds suffering from internal trouble, such as diarrhœa or inflammation, will consume abnormal quantities of water, and to their harm. But, of course, birds suffering from such complaints let one know unmistakeably that all is not well with them. So disease can hardly, I suppose, afford an explanation.

German Goldfinch and Paying Mules.

I have just come into possession of a house moulted German cock Goldfinch, and want to know how to feed him properly. Are they of any use for Mule breeding, and to what kind of hen Canary would he be best paired to breed Mules for song, and likely to pay for the trouble?—A. W. BLAKE.

A. W. Blake.—A German cock Goldfinch is to all intents and purposes the same as an English cock Goldfinch—as a rule, it is difficult to tell t'other from which, as the poet puts it. Any way, they hoth want feeding exactly the same, and the German is quite as likely to hreed Mules as a true-born Englishman. If you want the Mules purely for song, you can mate him to a Roller hen if you like, or to a hen of either Norwich or Yorkshire type. It really does not matter, so long as she is a healthy young hen—not over two years old, at any rate. Song Mules are of value only when they sing the pure Goldfinch or Linnet song, unadulterated by the notes of any other hird. They are then always saleable at a much higher price than the ordinary dark Mules. To attain this end the youngsters must be trained under a good singing Goldfinch (or Linnet, as the case may be), and hear the song of no other bird, until, at least, they themselves are song perfect. Feed your Goldfinch on the following stock mixture:—Hemp and teazle two pints each, canary one pint, linseed half a pint. Give a feed of maw or niger every other day or so, also thistle, dandelion, and wild seed mixture. For green food you cannot beat dandelion and groundsel, young leaves, and flowering and seeding heads.

Four-Pointed and Six-Pointed.

I have a Goldfinch-Canary Mule. It has eye and wing marks and two feathers on each side of the tail In showing, would these tail feathers he a detriment, or otherwise? Do they make it a six-pointed Mule? If so, is it of more value than a four-pointed oue?—GARCON.

Garcon.—If your Mule is a cock bird, and of good colour, you would seem to have a bird of some little value. Take carc of it. All other things heing equal—size, colour, and even-ness of marking—a six-pointed Mule would always beat a four-pointed, on the ground that six good marks are more difficult to produce than four good marks. Of course, a four-marked bird can lay claim to be lighter in plumage than a six-marked, but that is not the point; if it were, a three-pointed bird could always claim to heat a four-pointed. Two dark feathers on each side of the tail constitute a very good form of tail marking—one of the best, in fact. Sometimes the tail will be almost entirely dark, with but just a light feather or two in the centre; it is a moot question, then, whether the bird is really entitled to be termed a six-pointed Mule at all. Ideal eye and wing marks want to be neither too heavy (spreading) nor too light. The most admired eye-marks are those resembling an egg in shape—pointed end nearest the skull. The wing-marks should form a perfect V when the wings are closed, not extending over far up the back, and heing hounded, so to speak, by the light primaries (flights). There is little difference, practically, in the value of really good four and six-pointed Mules; both are far from common.

Blackcap's Likes and Dislikes.

I have a Blackcap Warhler that will not eat mealworms, either alive or cut in pieces. Kindly tell me what I can do, as I am afraid he will die without live insect food. He eats plenty of best ants' eggs and fruit.—C. FAIREY.

C. Fairey.—It is not at all unusual for a Blackcap to exhibit very little liking for mealworms. At the same time, it is not usual for them to refuse these dainty morsels altogether, and sooner or later you will find your bird accept them, I feel sure. You can cut a few in two and squeeze them out amongst its food. Plenty of other forms of live food are available in the summer, however. The Blackcap, though, of all our Warblers, is the one most fond of fruit; given this he will thrive and sing. He should always have some fruit on the menu, entirely mixed amongst the soft food, or hung up in the cage or wires if you like; banana, very ripe pear and apple, together with grated raw carrot, and hoiled potato, are very good to moisten the daily soft-food supply; many of my birds, too, were very fond of finely minced green stuff. For other fruit to use the choice is very wide, strawberries, garden currants, raspberries, grapes, elderherrics, blackberries, and the like, are all more or less greedily devoured, while there is but little fruit one can buy at a shop that they do not appreciate. A slice of a ripe peach is esteemed a great delicacy by most of the Blackcaps I keep myself.

Management of a Nightingale.

(1) How should a Nightingale be fed day by day? (2) Does egg do any harm amongst their food.—G.W.

G.W.—(1) My own methods of keeping 'Gales and similar small insectivorous hirds are as follows. As a stock mixture you cannot beat:—Powdered Osborne hiscuit, three parts; best ants' eggs and dried flies, two parts each; meat meal, half part, by measure. Take the quantity required of this, and mix it just crumbly moist with grated raw carrot, or finely chopped lettuce, watercress, or chickweed (use young leaves only), or cold boiled potato, varying frequently. It is necessary, of course, to give, in addition, all the live insect food (flies, spiders, wood-lice, earwigs, small beetles, smooth caterpillars, green fly, live ants' eggs, etc.) one can possibly ohtain; mealworms given regularly are indispensahle. To the above stock mixture I occasionally add, after damping, a teaspoonful or two of preserved egg-flake, or part of a hard-boiled fresh egg, finely minced, and, more occasionally still, a little finely scraped raw lean mutton or heef. Good cream cheese is a splendid food, too; give a little, finely chopped, and mixed, of course, with the above biscuit food, or just laid on top of it. Ripe fruit should also enter into the menu, either grated or shredded, and mixed among the soft food, or stuck between the cage wires; hanana, very ripe pear and apple, strawberries, grapes, elderberries, hlackherries, etc., are all more or less appreciated—you will soon find out your hird's likes and dislikes. I had a Nightingale passionately fond of privet berries; I used to squeeze out the stones, and give him the fleshy outer covering. (2) This query is answered in the above. The "egg question" is too knotty a one for discussion in this column. If you sprinkle a good pinch of Plasmon powder amongst your bird's food three or four times a week you needn't worry your head over egg, either one way or the other.

Skylark and its Treatment.

(1) Skylark keeps shaking its head, opens its heak, and all the time keeps scratching its head with its claw. It looks as if it has sore eyes. It is going through its moult. (2) Please tell me what is the proper food for them.—P.K.

P.K.—(1) Skylarks are peculiarly liable to he infested with insects, unless kept scrupulously clean and given every opportunity to take a dust hath. I expect this is the trouble with your own bird, and that the sore eyes result from him continually scratching about them, for insects will lurk around the head. The cage will need to be thoroughly cleansed by, say, scalding it with holling water, and the bird should be well dusted with pyrethrum powder or Keating's Insect powder, repeating the dusting the following day. If the bird is really moulting, keep it in a cosy place—not nccessarily a warmed place, hut one free from draughts. (2) A simple stock food for Larks, which will keep for ever and a day (almost) when sealed in tins, and which any good corn dealer or seller of hirds' foods will mix for you, is:—Game (or pheasant) meal, four parts; meat meal, good ants' eggs and dried flies,, one part each, hy measure. Get the game meal without grit. If you have any difficulty in doing so, finely crushed puppy cakes make an excellent substitute; or the "broken" biscuit obtainahle from the grocer. If the latter he used, add an extra part of meat meal. Damp quantity required for daily use with a little grated raw carrot or cold boiled potato, or finely chopped lettuce, chickweed, watercress, or other green food in season, and add a teaspoonful of preserved egg flake or half a hard-boiled egg twice or so a week. Give three or four mealworms daily, and any other insects you can lay hands on, especially spiders. Give seed in a separate vessel (not along with the soft food), ahout a teaspoonful of canary seed daily, with, for a change, crushed hemp, groats, maw, or rape. Let the hird have a fresh clover turf as often as possible. Cover the floor of cage with (or give in a deep pan) a mixture of fine road dust and sand, in which a teaspoonful of insect powder, or powdered sulphur, has been mixed. The bird will dust itself in this, which is a natural action, and necessary. It is a very excellent plan, too, to have a second drawer hottom to the cage, made of tin or zinc, which is run in occasionally filled with water, in which the bird will paddle, and so keep its feet in order. Or, and even hetter, it may he filled with very wet chickweed, over which the Lark will run.

In an Outdoor Aviary.

G.L.—Your aviary, 12 ft. long, 10 ft. wide, and 7 ft. high, with "sleeping house" attached, is a very nice size, and will comfortably hold upwards of 30 small hirds. You will soon see exactly how many, by not over-doing it at the start. It is not an altogether satisfactory undertaking, to keep seed-eating and insectivorous hirds together, except in aviaries of very large dimeusions; and only under the latter conditions should large spccies he mixed with small. Blackbirds in particular are apt to annoy, and even kill, their weaker brethren. Bramhlefinches, Blue-tits, and Java Sparrows, too, often prove sources of danger on that score; and sometimes Yellowhammers. As yours is a nice-sized aviary, however, you may have no trouble with the four last-named species. Budgerigars and Cockatiels really want an aviary to themselves, especially if hreeding results are being looked forward to; or solely the companionship of other Parrakeets. They have a bad reputation for mauling and mutilating smaller and weaker birds. For information on the foreign hird side of your aviary, please address your query to our Mr. Page.

Trouble with Clogged Feet.

M.J.M.—The chief cause of your trouble, I fancy, is the curious material you use for covering the cage floor. I never, I think, before heard of bran being put on the bottom of the cages of large insectivorous birds. I may say that I do not consider it at all a suitable material; at any rate, there are several things a good deal more suitable. I once tried hran myself as a floor covering for the cages of tiny insectivorous birds, but soon gave it up; a friend of mine tried it also, with the same result. You should go to a dealer in poultry foods (many bird-seed shops keep it), and huy a quantity of peat-moss litter. It is very cheap. Put a thick layer of this on the cage floor, teasing it out a little, if necessary, before doing so. Get it, when huying, broken up as small as possihle. It is as good as anything I know for the cage floors of large hirds, and does away with "clogged" feet when properly used. Cocoanut fihre is also an excellent material for the cage hottoms of all insectivorous hirds. It is often advertised in our columns, and can also be obtained from most seedsmen (sellers of garden seeds).

More Difficulty with Thrushes.

J. Plowman.—(1) Most certainly your hird is a cock. You do not, however, feed it sufficiently well for it ever to sing properly. The packet food you mention is none too "rich," yet you go and make it still less nutritious by adding soaked bread! Do you think you would feel like singing yourself if you were compelled to live month in and month out on food which practically left you half starved? I guess not. I am frequently telling how Thrushes should be fed (see the two last issues, for instance). Look how miserably the diet of your hird contrasts with the bill-of-fare therein set out. Give him some good, generous food, and I'll wager the Thrush is singing out stoutly in fourteen days time. (2) The second bird mentioned may be a hen—though, of course, I cannot say so for certain. If you yourself hand-reared it, and have never heard it either record, or attempt to sing, then it is safe to put it down as a female. As it seems to he ailing now, however, it can hardly be expected to he singing. Why not give this bird its liberty, and concentrate your attention on the other? It might prove to he a good move.

Hand-rearing Song Thrushes.

Will you please give me detailed instructions as to the feeding and general treatment required in rearing hy hand a nest of young Thrushes from ahout a week old?—A.P. (Abbeywood).

A.P. (Abbeywood).—I have been expecting this query. I answered it only a few weeks ago. Still, this only makes the second time this season; last year, I remember, it was shot at me some score of times. Here is our old friend again: Take the young when about ten days old—nest and all, if possihle—and keep them cosy, say, inside a wicker basket and on a bed of hay. At night throw a piece of flannel over the hasket; keep it on during the day if cold. Feed every hour at first; ahout every two hours later on. For food, crush an Osborne biscuit and heat half a hard-boiled egg up very finely, in a teacup, with a fork. Then mix the biscuit with the egg, and make it of a rather sloppy consistency with new milk. This is hest fed just slightly warmed. Always be perfectly sure it is fresh and sweet; it should be prepared fresh twice daily, if possible. A small, flat piece of wood, with a suitably shaped bluut end can be used to feed with; or a large, hlunted toothpick. As the youngsters get older, cut small mealworms in halves, dip them in milk, and pop them into their mouths; also any flies you can capture. It is quite a simple task to hand-rear Thrushes. The chief thing is to feed very often, and to give only a very little at a time. Keep the nestlings and their surroundings scrupulously clean, or they will not thrive.

Goldfinch Ailing.

Charlie.—I don't think it matters much what I tell you to do. When a Goldfinch sits with head under wing, and body moving "like hellows," the time for advice is generally past, and the time for action near at hand—the said action being the interment of the dear departed under the rosebush in the garden corner. Should the hird be still alive when you read my reply, I can only advise you to give him a strong dose of saline medicine and a change of diet. Take away his drinking water for an hour or two, and when you replace it, let as much sulphate of soda as will lie on a shilling be dissolved in every two tablespoonfuls. Leave this on for one day. For three or four days afterwards well stir half a teaspoonful of taraxacum (dandelion juice) into the same quantity of drinking water—fresh daily, of course. If he then shows signs of pulling round, change the taraxacum for a small teaspoonful of Parrish's Chemical Food. Let him have as much niger and maw seed as he cares to eat; don't trouble about the others. A little thistle, if you can get it, might be beneficial. Pin a small mealworm down to a perch. He may quite likely tackle it; should he do so, give them freely, for they will help very considerably to pull him round.

Some Aviary Details.

Nil Desperandum.—Sorry to hear of your past experience. Your outside flight and house will hold upwards of 30 small hirds very comfortably. I should not huild up any hopes of successful breeding results; such are not common amongst mixed

collections. If any young birds come your way, let them be in the light of "added joys"—then the pangs of disappointment will never be yours. Mind you, I shall be surprised if one or other of the couples do not breed, especially if you avoid overcrowding It is certainly not too late in the season. Why, I was out in the country last week-end, and saw Greenfinches still in flocks. Your surmise is quite correct. I advise you for all-the-year-round purposes to choose from the Finch and Bunting tribes. Only have one pair each of Chaffinches and Bramblefinches, and watch they don't misbehave. If you invest in a pair of Crossbills, watch these likewise; in fact, owners of small aviaries need always to keep an eye open for outrageously aggressive individuals. Any "fresh-caught" birds you buy now are practically sure to be exceeding wild. Give all the seeds usually recommended, with sunflower, hemp, canary, summer rape, and teazle, in separate hoppers for certain. Such simple things as flower pot saucers answer admirably for both seed and water. Self-feeding hoppers, water fountains, and the like will be found (illustrated) in all the catalogues of the large firms advertising in our columns Look them through, and choose what seem likely to best suit your purpose. I cannot recommend any particular kind or maker; it is against the rules. The seeding green food I gather I throw on the aviary floor, and rake out the stalks after it has been picked over. It can be stuffed tightly into not too tall jam jars; this is a good way of giving green food. Give all the kinds recommended in this column. I really couldn't say whether Michaelmas daisies are harmful to birds; I should say not, however. If possible, I certainly advise you to have the outside entrance to the inner shelter. If entered from the inside, the birds' only means of egress lies past the intruder—and that means a panic. Am afraid this fills my space for one week.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S., M.B.N.H.S.

What Bird?

Miss Fowler.—I am rather in doubt as to what species your sketch refers to, but will try to name it for you in our next issue. In the meantime you will be quite safe in dieting it on some good soft food mixture, ingredients are given to another querist in this issue, or see our advertisement columns for one ready mixed. In addition, give plenty of ripe fruit, green food, and a few mealworms, or such other insects as you can capture. If only just received it is best kept warm, and then, as it gathers tone, gradually hardened off, as the gardeners say.

Food for Budgerigars and Zebra Finches.

(1) What is the proper food for Zebra Finches when feeding young? (2) Same for Budgerigars during same period?—J.S.

J.S.—(1) Canary, white and spray millet, green food (grass in flower, etc.), cuttlefish, grit, water, and soft food; equal parts of game meal, ants' eggs, dried flies, and crumbled sponge cake; well mix and make crumbly moist for use, or get one ready mixed (see advertisement columns). (2) In addition to their regular diet, give white oats and a dry crust of household bread. At this time give liberal supplies of tufts of grass in flower, also fresh tender lettuce and other green food.

Diet for Budgerigars.

What is their correct diet and treatment?—W. E. STIRRLEY.

W. E. Stirrley.—See reply to "J. S." in this issue, and give your birds canary and white millet seed in addition to the diet given in (2) of this reply. They are almost omnivorous as to green food, but grass in flower is far and away the best; give them tufts of same to pull to pieces. You can also give ripe apple, lettuce, and any non-poisonous weeds.

Budgerigar with Swelling.

My bird's beak grows tremendously, therefore it has to be cut at intervals so that it can eat; also it has a swelling on top of beak; looks like a gathering, with watery discharge. Is there any cure?—BEDFORD.

Bedford.—As regards the continuously growing beak, it must be cut as often as required, so that the bird can eat. To help to check this abnormality keep up a supply of cuttlefish, and put in its cage several pieces of old mortar rubbish as large as good-sized marbles. Re the swelling, by gentle pressure (don't damage its nostrils, if the growth is near there) remove any pus, well cleanse with tepid water, and lightly anoint with spermaceti ointment. Your diet is satisfactory, but if there is any weakness, then lightly colour its drinking water with Parrish's Chemical Food till it is in condition again. Observe it carefully, and note if the exusion is from the nostril, consequent upon catarrh; if so, get some opium and glycerine in equal parts, and give one drop of this direct to the mouth twice a day till relief is given; also wipe the nostrils with diluted glyco-thymoline.

British and Foreign Birds for Aviary.

What Foreign birds can I keep with Britishers in my outdoor aviary, plan enclosed? Also kindly give treatment and nesting arrangements, etc.—NIL DESPERANDUM.

Nil Desperandum.—You have hygienic accommodation for about thirty birds. The only British birds I find safe to keep with Foreigners are Goldies, Bullies, Siskins, Linnets, and Redpolls. With these you could keep Pekin Robins, Madagascar, Napoleon, and Black-headed Weavers, Orange-cheeked, Golden-breasted, Grey and St. Helena Waxbills, Zebra, Ribbon, Pectoral, and Rufous-tailed Finches; Java Sparrows, Spice Birds, Silverbills, and Mannikins generally. Nesting receptacles, put up husks, Hartz Canary travelling cages, small boxes, and cocoa-nut husks, supplying hay, grass, and a Canary nest bag for building material. Diet: Canary, white, brown, and spray millet, a few oats, green food, such as grass in flower, lettuce, and any wholesome weeds, grit, cuttlefish, a few mealworms, and other insects for the Weavers and Pekins, and a little soft food and ripe fruit for the Pekin Robins. The majority of the above are 3/6 to 5/- a pair, Pectorals and Rufous-tails, 10/- to 15/- a pair, and the Weavers, 5/6 to 7/6 each.

Young Grey Parrots,

I have bought a pair. They are taking their hard corn mixture with evident relish; have given Osborne biscuit and a little ripe fruit. Will they need maize? Can I improve on my treatment at all? In case of constipation, what is the best remedy?—M.H.

M.H.—If your birds are eating plentifully of the seed mixture they are better without boiled maize. You might with advantage lightly colour their drinking water with Parrish's Chemical Food. The best plan is to keep up a continuous supply of the seed mixture, and offer the other items, biscuit, ripe fruit, etc., at intervals. Do not give table scraps, slops, or any kind of animal food whatever. They should be covered up at night, that is, entirely round the sides of cage, but a portion of the top should be left open for ventilation. Except as above, you cannot improve your treatment. In case of constipation drop the chemical food, and put in their drinking water half a teaspoonful of Dinneford's Magnesia till relief is given. Keep warm and out of draught and they should do well. If there should be any going out of condition, you had better write at once, giving full particulars.

Green Parrot with Growth on Throat.

E. Carpenter.—The growth is of too long standing for me to attempt to suggest a remedy. You must consult a vet., who will most probably cut the growth away, and so give the bird almost immediate relief. In the meantime, keep it warm, quiet, and out of all draught. Give it for one day only one teaspoonful of Dinneford's Magnesia in one ounce of water, supplying nothing else to drink for that day. Follow this by a course of Parrish's Chemical Food; well colour its drinking water with same for a fortnight or three weeks. As to the sore, anoint it with a little spermaceti ointment, and unless the bird is continually rubbing it, it should soon heal. It is a pity you did not have the swelling attended to earlier, twelve months being a long time to let a matter of this kind lie untreated. In addition to the items of diet you enumerate, supply the seed mixture regularly advised in this column for Green Parrots or Parrakeets.

Grey Parrot Out of Condition.

My bird is mopy and weak, and has scarcely spoken since Easter; its voidings are soft, but not watery. It eats and plumes itself well, and is fed as you advise in "C.B." How can I treat?—H. TAGG.

H. Tagg.—I do not think, so far as I can gather from your details, that there is at present anything serious the matter with your bird. Keep it warm, quiet, and out of all draught. Put one teaspoonful of Dinneford's Magnesia in one ounce of water, and let the bird have only this to drink for one day, not leaving it in cage all day, but letting it satisfy its thirst three or four times during the day. On other days well colour its drinking water with Parrish's Chemical Food. The magnesia had better be repeated after the interval of a week. See that the bird gets ripe fruit, cuttlefish, and a little green food regularly. If there is no improvement in a fortnight's time, you had better repeat query, giving the fullest possible particulars.

Parrot Wheezing.

My young African Grey is very mopy; its feathers hang loose, it wheezes, and beak, tongue, and nostrils are covered with slime. It is fed on boiled maize, Mellins' Food, bread and milk, and hemp seed. What is the remedy?—J. KOCH.

J. Koch.—Your diet is largely in fault. Keep a tin of the following seed mixture in its cage:—Canary, hemp, millet, white oats, dari, and sunflower seeds; till you see it eating heartily of the above mixture, let it have as much boiled maize as it will eat, but do not give the milk sop. Let it satisfy its thirst three times a day with water that has been slightly coloured with Parrish's Chemical Food. For one day only put half a teaspoonful of Dinneford's Magnesia over its boiled maize. It should also have such ripe fruit as it will eat, a little plain biscuit. Cleanse its nostrils and beak with diluted glyco-thymoline. Get from your chemist the following mixture: Ipecacuanha wine, oxymel of squills and glycerine, in equal parts; take of the mixture half teaspoonful and add one teaspoonful of water, and give this direct to the mouth twice a day. The bird should be kept warm (but not in too dry a heat), quiet, and out of reach of draught. A piece of cuttlefish should be kept in its cage. Note: Boiled maize only keeps fresh one day, and you must not use a metal drinking vessel while giving drugs. When the bird is taking the dry seed mixture in sufficient quantity, gradually discontinue the boiled maize. If you watch this column you will not lack details as to how to treat your bird.

Parrot with Worms.

My bird suffers with above, but is otherwise lively enough. It will eat nothing but Canary and hemp seed; it has water ad lib; its bowels are rather open. How can I get rid of the worms?—BERNARD.

Bernard.—Give your bird as much powdered areca nut as will lie on a sixpence; slightly damp a piece of household bread, and the powder will adhere to it, or slightly damp the powder and give it in the form of a pellet. Give this, say, every other day for a week, and lightly colour its drinking water with Parrish's Chemical Food. If the trouble still continues after a fortnight, try several doses of jalap, as much as will lie on a sixpence, given under the same conditions as the areca nut. The seed diet is very wholesome, but I should try and induce it to take, for variety, such extras as ripe fruit, nuts, plain biscuits, dry crust of household bread, and it should have regular supplies of grit and cuttlefish. You must induce it to take the nut or jalap by some means. If it will not eat a slightly moistened crust, you must try giving it direct to the mouth by means of a small stick, slightly moistened; either the nut or jalap will adhere to same. If both the above remedies fail, remove the bird's food overnight, and before it has anything to eat in the morning give 8 to 10 drops of oil of male fern direct to the mouth; in about an hour supply it with food, and then give half a teaspoonful of Dinneford's Magnesia; repeat the treatment if there are any signs of the parasites still lingering. Do not give table scraps, sops, slops, or any kind of animal food.

Grey Parrot Breathing Badly.

My bird breathes heavily, swells out its throat, and jerks up its tail while doing so. How can I treat?—N. BROWN.

N. Brown.—This bird appears to be in rather a bad way, and the details supplied are so meagre, that I am a little in doubt as to what advice to give. You had better repeat this query next week, stating the condition of its bowels, whether there is any running at the mouth or nostrils, and as to whether mouth and throat is furred, or ulcerated. In the meantime give half a teaspoonful of tasteless castor oil direct to the mouth, for one day only, and for a few days put 8 to 10 drops of glycerine in its drinking water. If the bird becomes weak, put three or four drops of brandy in a little water, and let the bird take a few sips occasionally. Continue your present diet, which I understand is same as that advised regularly in this column, and keep the bird warm, and out of all draught.

Indian, Green and Grey Parrots.

Inquirer.—It is one of the many species of Alexandrines or Ringnecks, it is impossible to say which from your details, but I am of the opinion it is a female Ring-necked Parrakeet (*Palæornis torquata*). Their value varies from 5/- to 10/-, according to number on the market, but a talking bird is, of course, worth much more according to its talent. Give it a dose of Dinneford's Magnesia (see other replies for quantity, etc.), and put a few (six to eight) drops of glycerine in its water for a few days. Ripe fruit is good for it, as also is plain biscuit, boiled potato, nuts, green food, grit, and cuttlefish. Re the young Grey Parrot: You must let it have a daily supply of boiled maize (this only keeps fresh one day); also keep a tin of the following seed mixture in its cage:—Canary and oats, two parts each, wheat, oats, dari, hemp, and white sunflower seeds, one part each. Only give grit a little at a time till it becomes accustomed to it. keep a piece of cuttlefish in its cage, and also offer, to vary its diet, ripe fruit, nuts, plain biscuits, and green food. Keep it warm and out of draught for a time. Yes, cover it up all round the sides of cage, but not over the top; the cover should cover entirely the open wirework of the sides, but the centre portion of top must be left open. When you find the bird eating sufficient of the dry seed mixture, gradually wean it from the boiled maize.

Budgerigars Throwing Out Eggs.

My birds appear to be quarrelling, they have thrown out their eggs, and I found one of the hens bleeding. She was also egg-bound, but following your advice in past queries I brought her through. Can I give Parrish's Food, and how shall I treat?—A. BARKER.

A. Barker.—Though these birds are gregarious, and, generally speaking, will live together in any numbers which their enclosure will accommodate, occasionally a pair or odd individual turn up that are not only spiteful but sad cannibals, for I have had such; and it may be one of your birds is of this disposition. On the other hand, it may be only a temporary squabble that will not be repeated. What is your accommodation? Their cage or aviary should be sufficiently large to allow of your fixing at least double the number of husks (quite a foot apart) that you have pairs of birds. You treated your bird correctly for egg-binding, and undoubtedly saved her life by so doing. Put her on a course of Chemical Food, supply plenty of cuttlefish, and crushed egg-shells left from your table, and in a month or five weeks' time it should be safe to turn her into your aviary again. Of course, if the quarrelling continues, you will have to permanently remove the obstreperous individuals. Let them have a liberal supply of tufts of grass in flower.

Foreign Bird Queries continued on p. 408.

POST MORTEMS.

Mr. J. North, 435, Oxford Road, Reading, will examine cage birds for a fee of 1s. 6d. each bird; for a reply direct, 2s. 6d.; analysis, 21s. Subjects for post-mortem examination must be sent packed in a box direct to J. North, with fee. Any sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.

Canary (H. Gregory).—Chronic softening of liver, then acute inflammation of rupture of blood-vessel of that organ.

Canary Hen (E. Rixon).—Softening of liver, then inflammation of that organ, and also of the lungs, rupture of blood-vessel (apoplexy), terminating life.

Nightingale (C. Harrison).—Inflammation of lungs and liver, commonly called "a chill." This bird's perfect plumage reflects great credit on your three years' care of it.

GENERAL.

Answered by the EDITOR.

Complaint (Robert Hugh Jones).—See Rule 8, please.

T. C. Crawhall.—Many thanks. We hope to use it in the near future.

J.H.—Thanks for yours. We shall be pleased to receive the notes mentioned.

Advice Wanted (Harold Marshall).—We have written to the gentleman named about your suggestion. Thanks muchly.

Appreciation (J. S. Crawford).—Very glad to hear you found CAGE BIRDS so interesting. Article will receive consideration.

Future Advertisements (J. Simper).—Such loyal sentiments do you credit, and we are deeply grateful to you for giving expression to them.

Never Advertised Before (Thos. Howard).—Remittances sent were quite correct. We wish you success.

S. Fuller.—Many thanks, you will see your letter on Finches appears this week. Shall be pleased at any time to hear from you on matters of interest to our readers.

T. Aitken.—The sketch reflects very great credit indeed upon your powers as an artist. Thanks very much for the cuttings, which we hope to use at an early date.

Club Notice (G. A. Charles).—Your notice of meeting, May 1st, did not reach us in time for insertion in last week's issue. Club notices should be here on Tuesday—Wednesday first post at latest.

Coloured Plates (F. J. Rook).—No such plates as you require have been issued by any Fancy paper. We think well, though, of the idea, and will arrange for such a plate to appear some time during the year.

J. Brodie-Mills.—There is no book dealing with Lancashires only. House's "Canary Manual" contains a chapter on the breed, as does Cassell's "Canaries and Cage Birds," which we could obtain for you, price 3ss.

W. Greenwood and A. Wilkinson.—Although you only hold members' shows we would like to point out that by advertising in CAGE BIRDS you would possibly increase the number of your members, and thus advertising would be of some use to you. Many thanks for your kind words about our Breeding Competition.

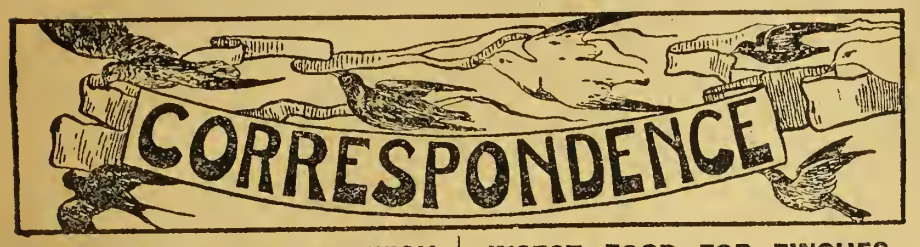
Who Should Be the Loser? (Mechanic).—Sorry if we read your letter last week hastily, but at the same time we must point out to you that all questions must be endorsed by the full name and address of the sender, whereas you simply write as "Mechanic, Plaistow." In our view, the advertiser should be the loser, as all birds are sent at sender's risk unless an agreement to the contrary is made when purchasing. No court of law, in our view, would uphold a claim for a bird that arrived dead.

Blaze of Colour Competition (A. Woollard).—The matters about which you write are purely questions of individual opinion, and if you found twenty thousand other fanciers to agree with your placings of these birds it would not serve any good purpose either in upsetting the awards or convincing those who disagreed with you that they were in the wrong. A judge's awards are final. Please treat them as such. We are confident that Mr. Payne had not the slightest inteation of insulting anyone by his remarks.

EDITORIAL.

At the special meeting of the Cage Bird Union Council, called to consider the disqualifications in the Green Canary classes at the last Crystal Palace Show, the following resolution was carried without dissent: "That whilst recognising that the judge was justified in regarding the birds with the gravest possible suspicion, but having very fully and carefully considered the whole matter, this meeting acquits Messrs. Clayton and Stewart of dishonesty in showing the birds in question." The opinion of the majority was that if the feathers were cut, they had not been done by or with the cognisance of the exhibitors, and of this opinion the exhibitors received full benefit. But it seems quite clear to us that this resolution does not upset the disqualification. It acquits the exhibitors of dishonest attempt, upon which we most heartily and unreservedly congratulate them, but the birds were disqualified for being shown with cut feathers, and the resolution carefully evades any reference to the point upon which the Green Canary Association and every exhibitor requires a pronouncement. Are such feathers as Mr. Heath disqualified for permissible in a Green Canary? The exhibitors concerned have been declared innocent, but what of the birds? The first part of the resolution would imply that if not actually fraudulent they are open to the gravest possible suspicion. We are afraid an opportunity has been given to critics of the Union to say that the real point at issue has been placed on one side. A definite pronouncement one way or the other is needed. We hear, though we can't say how true it is, that the resolution has satisfied neither party concerned. Did the Council think the feathers in question were actually cut or not? And if cut, is such cutting legal? That is the point the Union will be asked to settle, if not now, later. The vexed problem with some of the Council seemed to be the absence of motive for cutting. Mr. Ramsden, we are informed, did not vote, and Mr. Hadwin was not allowed to move his original resolution or to have a hand in the resolution finally settled on. Meanwhile, such is the unsettled state of affairs that the Palace Show managers are taking legal advice on the point of whether the resolution passed cancels the disqualification or not. Their present opinion is that it does not, but perhaps a careful consideration on the part of their legal advisers may lead them to a contrary belief. We shall see.

It has been brought to our notice by the managers of the Crystal Palace Show that the Scottish representative of a contemporary has made certain reflections upon the Editor of this paper and themselves, implying in some measure that a breach of faith has been committed, either by us or them, in connection with the classes we guaranteed at the late Crystal Palace Show. We desire to advise any exhibitors who are concerned in these classes of the actual facts:—We were informed by the Managers of the Show upon the evening the entries closed that it would take the sum of £3 16s. to allow these classes to stand, according to the rules of their schedule. This amount we paid, and so far as we are concerned, our legal and moral obligations end with that payment. In making the statement in our issue of February 9th, we intended to convey, as the context clearly shows, that we "had given such guarantee as would enable the classes threatened with complete cancellation to be included." We were totally unacquainted with Rule II., and immediately this rule was brought to our notice made the following offer to the management, viz., "That if any exhibitor has been misled into thinking that our guarantee was used in the technical sense of Rule II., and that full prize money would be awarded in the classes in question, we will be pleased to make up the necessary balance to be paid to such exhibitors, although under no obligation to do so, having fulfilled our part of the bargain to the letter." It would have argued a greater interest in getting the full prize-money on the part of E. G. Wright, the Scottish representative concerned, if, instead of casting public odium upon this paper and the management of the Palace, he had written to us as guarantors, pointing out his grievance, when it would, needless to say, immediately have been remedied. Wright made his entries before our guarantee appeared in print, and when, so far as he knew, he was likely to receive half prize money. His sending or withholding his birds could have been in no way affected by our action, as secretaries never advise exhibitors whether half or full prize money is being given. Our solicitors advise us that Wright has not the slightest legal claim to the few shillings about which he has made such an outcry, and as for any moral damages he may have suffered, a man who confessedly is prepared to imperil his birds' health for a few shillings, but says that he doesn't like to do it for half the sum, deserves far less consideration than he has received at the hands of CAGE BIRDS. In view, however, of Mr. Wright's action in demanding full prize money as his legal right (no pun intended), and refusing to accept it "ex gratia"—to use Mr. Wright's own bad Latin—we have no option but to let him put his claim to the test.—ED. "C. B."



THE TYPE OF THE NORWICH.

SIR,—I notice a letter from the Hon. Sec. of the Southern P.C., inviting all fanciers to bring drawings, etc., to a meeting for the second week in May to settle the type of the Norwich. Does Mr. Matthes mean a meeting for the Southern Club, or one to be called to adopt a type to be a universal standard? If the former, all well and good, but if the latter, it requires a little thought, especially as the N.P.C. and the Scotch Club have already one each. I quite agree that a move wants making, and doubtless will be made at our committee meeting on May 11th. We want a life-sized one, but we cannot ask the other two clubs to adopt it without their consent; but the type should be the same for all, and especially with the coming contests in view. What I would like to suggest is that each club draw up a model with points, and have them printed by the Press—if they would oblige us—similar to the "Blaze of Colour" just issued, minus the colour, and every member of the three clubs to have a vote, and the one getting most votes to be the recognised standard for all three clubs. This, of course, means time; but we cannot rush such an important affair as this through in a week or two. It is the points we want to get at. As we know, some judges judge type, quality, and colour last; others say a Norwich is nothing without colour, and they put it first; while others say I must have a good "big 'un," and up it goes, and there we are. It is this size and colour that is wrong, and especially the latter, and the sooner we get to know how many points is allowed for each, and greatly reduce the present cravings for size and colour, then, and not till then, will type and quality get its due. J. RAYNES.

SIR,—We think something should be done to fix a standard type for Norwich Plainheads, and if a large meeting is to be held by the S.N.P.C., we consider that it would be well if several of our judges should be present at the same. We shall certainly try to attend if possible at such a meeting, which should be well attended by Norwich fanciers.

LUPTON AND JORDAN.

INTERESTING NOTES ON BIRD LIFE ROUND GLOUCESTER.

SIR,—In this week's notes of your interesting paper I see there is someone else jubilant over the prospect of spring and the arrival of migratory birds. During the last few weeks I have spent my "half-day off" surveying the grounds, which will soon be crowded with bird-life, but found very little worthy of note. Perhaps that was due to the fact that it was afternoon—not a good time for studying birds; somehow or other they don't seem to be about. However, I went out on Sunday morning, and was well pleased with the result of my observations. The first migratory bird which attracted my attention was a male Redstart, and though rather wild, kept up his beautiful song. Soon afterwards I came across two pairs of Wheatears, which have been here three or four weeks, so a local bird-catcher tells me. Strange to say, I only saw one yellow Wagtail, and that was on the wing; but I heard its note, which overcame any doubt about its identity. Other years I have seen dozens about this particular locality, as they roost for the first few weeks of their arrival on the long dried reed stems where the Reed Warbler breeds. The Pied Wagtails have assumed their full breeding plumage, as have also the Reed Buntings, which are busily engaged looking out nesting sites. I saw and heard the Willow Wren for the first time this year, though its close relation, the Chiff-Chaff, has been here several weeks. There were several Swallows and a few Sand Martins flying low over the water. The House Martin has not appeared yet. None of the Warblers seem to have turned up yet, nor the Whitethroats—rather fortunate for them, as there is a scarcity of cover; the same thing occurred last year, which accounted for Reed Warblers especially building their nests in very unusual places, instead of the reeds. Several nests were found in thorn fences, one half way up the young shoots of an old willow, while another was built in the stems of meadowsweet, which I thought was a Marsh Warbler's till I saw the eggs. I found a nest of this latter Warbler built in a tall thorn fence, at least five feet from the ground. Unfortunately, all the high old thorn fences round here are being cut down, so we shan't get many Red-backed Shrikes this season. Last year there was a scarcity of the Landrail, very few being heard in any part of this county. The common Sandpiper arrived last week. During the next three or four weeks the arrival of migrants will be great, so that a ramble in the country districts will well repay any naturalist. I am sorry to say there are few "enthusiasts" round here. My experience is that in large manufacturing towns, where people have to travel miles to get to the country, there are more ardent ornithologists than in places where the inhabitants are literally surrounded with bird life. I was only out two and a half hours and saw 33 species of British birds. Next week I hope to add a few more to the list. ALFRED THOMAS.

INSECT FOOD FOR FINCHES.

SIR,—Last season I was particularly struck with my Siskin's queer behaviour. I had him with several other Finches in a large wire aviary, placed about one inch from wall of bird room. Travelling at a rapid rate over the wires, he seemed to be striving to obtain something just out of his reach. On closer inspection this proved to be a small spider, crawling up on the wall. Curious to know what he would do, I caught the spider and gave it to him, which he ate with great relish. This form of diet is not generally found on our little friend's menu card, and this incident set me thinking. Is this food Nature's conditioner? Can we improve on our stock mixtures, wild seeds and various green stuffs in season? Our experts tell us—in fact, every keen observer should know—there is not the slightest doubt that insect life in some form or other is largely eaten by our Finches, especially whilst they have young to feed. I therefore experimented a little in this direction, and with these results:—Bullfinches have been known to clear out the contents of a silkworm breeding box, and Uncle Peter has been informing us lately how his old pet had a great liking for the Magpie moth caterpillar. I really think my Bullfinches would have been well pleased if my supply of larvæ had been twice as great. The Goldfinches I had no difficulty with at all. One in particular would eat the larvæ of the Brassicæ, which infests cabbages—hence its specific name—certainly not the most tempting of caterpillars. Linnets, Redpolls, etc., although they would eat the smaller kinds, such as those that swarm on the hawthorn, oak and elm, had a greater liking for the minute life that abounds in shepherd's purse, plantain, grasses and such like. If one wishes to test this, procure a handful of the above weeds, shaking them vigorously over a piece of paper, and give to the birds. You will also have demonstrated to you one of the reasons why young chicks thrive so on grass runs. But why say more? Is it not written in the chronicles of G. E. Weston, in "Answers to Correspondence," that these things are so? Hybrid pairs would benefit with a little of this diet, and breeders would, perhaps, save a valuable Hybrid if they had a little of this food at hand. I fancy I can hear some of you say, "But how can I obtain it in sufficient quantities?" Nothing easier when you know how. Certainly not by picking them individually off plants, etc. An entomologist would resort to the simple method known as "tapping." I have previously mentioned the hawthorn, oak and elm, and for general purposes perhaps the former would be the best to operate on. It would take up too much valuable space to enumerate all the signs of insect life on tree or shrub; but some are only too well known to those of us with a love of gardening. In a week or two we shall see on some of the bushes a mass of gossamer thread-like spider's web. These contain or keep together huge battalions of young larvæ, and this is the ideal spot for the collector. Spread a sheet or paper beneath branch or bush as the case may be, and administer several sharp blows to same with a heavy stick. This will dislodge the caterpillars, and, as all is fish that comes to our net, we have no selecting, as in the case of the entomologist. Transfer the catch to a tin box, and do not omit to procure some "feed." This must come from the same specie of tree, and, by keeping fresh, you will be able to keep in good health until stock is exhausted. Your store box must be fitted over with muslin, as fresh air is just as essential to insect as to bird life. In conclusion, try and educate your feeding hens to the insect diet. They will readily eat fresh ants' eggs, and if they acquire a taste for the small green caterpillar, you have an ideal bird to take over a nest of young Hybrids. I trust the above method of procuring insect food will be of some use to my brother fanciers, and I have not much doubt that those that the Finches refuse will be quickly demolished by the various Buntings and Softbills. We cannot do without each other's help, and, just as we touch on our botanical friends' preserves, so also must we raid the secrets of the lover of entomology, if we wish to succeed in our particular fancy or hobby. Personally, I am greatly indebted to CAGE BIRDS, not only as a fancier, but for those bright articles which appeal to that which is best in us—a love of Nature.

S. FULLER.

[Keepers of British Finches will, we are sure, feel deeply indebted to Mr. Fuller for his most instructive and interesting letter.—ED.]

THE "OBSTROPULOUS" YOUNG CUCKOO.

SIR,—I have often seen the young Cuckoo ejecting or attempting to throw out other eggs in the nest that the young Cuckoo was hatched in. As the period of the year is now coming when young ones can be found, if naturalists that have not seen this performance would carry in their pockets a boy's small marble they can use this instead of an egg; the young bird cannot throw a marble out, but it will exert itself and try to do it. The marble, being round, it constantly rolls back again into the nest. J. H. VERRALL.

AMONGST THE BIRDS AT ROTHESAY.

Notes by a Scottish Gardener.

SIR,—Blackbirds are very plentiful this season, and are now busy with their nestlings. These birds are seen at their best when about three years old. What a handsome bird the Blackbird is then, with his amber beak and jet-black coat! In the spring they feed largely on worms, grubs, and other insects; during the summer they feed on insects and fruit, such as strawberries, gooseberries, red and black currants; in fact, they will tackle anything in the fruit line. The Song Thrushes are also very numerous, in fact, more so than the Blackbirds. It is very amusing to watch these birds on the lawns. They will run for a few yards, stop all of a sudden, hold their head to the side as if listening, and then make a tap at Mr. Worm. During the early part of the year they feed on worms, snails, and other insects. They are not so partial to fruit as the Blackbird. Robins we have in plenty, and what beautiful fellows they are, also the fiercest of great fighters. I have seen them nearly kill one another. During the summer they feed on worms, grubs, flies, and other insects. In the winter they will eat all sorts of scraps from the table, and if you want to see them enjoy themselves give them a piece of fresh butter. Hedge Sparrows are also very plentiful. They are sober-looking chaps, but beautiful songsters. In the summer he feeds on all sorts of insects, seeds, etc. Tits are also in plenty—Great Tit, Tom Tit, Marsh Tit, Cole Tit, and Long-tailed Tit; but I have not yet seen the Crested or Bearded Tit here. Their winter food is all sorts of nuts. This winter beech mast has been very plentiful, and has kept them going. In summer they feed on caterpillars and all sorts of insects. I have watched them feeding young, and in nearly every instance they were feeding on small green caterpillars. Starlings are always to be seen here in large numbers, and are great friends to the farmer and gardener. I have seen a pair of these birds when feeding young carrying hundreds of large grubs to them every day. In summer they feed on grubs and other insects, and in winter they are very fond of scraps from the table. The Pied Wagtail is very plentiful, also Greys, but I have seen very few Yellows. I notice these birds feed principally on flies. I have watched the Greys and Pieds hunting on the housetops for them all through the winter months. Golden-crested and Jenny Wrens are also very numerous. I have also seen one Fire Crest. These birds feed on all sorts of tiny insects, flies especially. Tree Creepers are also plentiful, and it is a pretty sight to see these birds creeping all round the trees hunting for small insects. Larks are also to be seen in large numbers; they feed on grain and all sorts of insects. Waxwings are very seldom seen. Six years ago I caught one feeding on the yew-berries in the garden, but I have not seen one here since. Stonechat are also to be seen here on the moors; they are beautiful birds, and it is a pretty sight to seem them skip over the heather after flies, etc. In summer we have the Whinchat, Redstart, and Wheatear, three beautiful birds, also Spotted Flycatcher, Whitethroat, Wood Wren, and a good few of the Warblers, but I have not seen the Pied Flycatcher. Bullfinches are very plentiful. I notice Bullfinches feed mostly on heather. In spring they feed on buds of larch, hawthorn, plums, black currants, and gooseberries; in summer on dandelion, groundsel, milk thistle, sorrel, dock, meadowsweet, redshank, etc. Goldfinches are not very numerous; I have only seen one, but I am glad to say a flock of eight has been seen at different times this past winter. They feed on dandelion, milk thistle, teazle, knapweed, groundsel, redshank, etc. The Brown Linnet is very common here; he is a beautiful songster; during summer he feeds on all sorts of seeds, such as shepherd's purse, chickweed, sorrel, redshank, dandelion, etc. Twites are also very numerous, and breed here freely. I have hatched and reared this bird under Canaries, also had a pair which bred in an outdoor aviary last summer; food same as Linnet. The Lesser Redpoll is very common, but very few Mealies come here; only one has been caught here to my knowledge. Siskins are not very plentiful, but of late they have been more numerous, a few nesting here. During summer they feed on dandelion, milk thistle, groundsel, knapweed, seeding heads of grass, etc.; in winter the seed of the alder is largely used. Greenfinches are to be seen in large numbers. For months I have seen them feed on the stones of the yewberries. Chaffinches are also very plentiful, and in spring they are a picture to look on. Bramble-finches have been very plentiful this winter, owing, I think, to the splendid crop of beech mast. Yellow and Reed Buntings are very common here, but I have not yet come across the Cirl, Common, and Snow Buntings. During the spring and summer a great many of our birds are destroyed in the gardens, which, I think, is for want of thought, for if it was not for the birds we would have very few crops. Anyone who has a large range of glasshouses, where birds are excluded, knows it costs pounds yearly for fumigating to keep down insects. When sowing seeds people should mix a little red lead and paraffin oil along with them; after the seeds come through the ground insert a few twigs at each side of bed, run black thread across same, and the birds will not come near them. Don't grudge the birds a little, but always remember they are our best friends in the garden.

KEPT FROM DRINK THROUGH CANARY BREEDING.

SIR,—I think it is my duty to give your paper a few lines of praise. A few weeks ago I met a friend of mine, and he was reading CAGE BIRDS. He remarked to me what a good penny-worth it was, and said you could always get some very fine information out of it. I made up my mind to try my luck at Canary breeding, and got him to write to you and ask you a few questions, which you were kind enough to answer through your paper. I may say that I have acted on your information, and can now call myself a full-blown fancier and breeder. I have had four nests of Canaries off since, and look like having some more soon (thanks to you). I may say, since I have taken breeding on. I go straight home from work, instead of calling on so many public-houses, and I can assure you that I now feel a different man. It has really kept me from being the worse for drink for the past two months. I should recommend any man to have Canary breeding as a hobby, it being a very clean pastime.

COLEY DEFRIEND.

THE WICKEDNESS OF COLOUR FEEDING.

SIR,—After referring to "prejudice" and "plebiscite," your correspondent, C. St. J., promulgates a deep and brain-racking problem: "Granted that the true bird fancier is not to be found at shows, where was the bird Fancy to be found before shows became popular?" I will endeavour to answer him to the best of my ability, and also to draw a simile (spell it 'simile,' please, Mr. Editor, not "smile"; this is a serious matter). Thirty years ago (I am writing of our city) you could find the Fancy (ugly word!) at the same place as you can now find football enthusiasts, especially if the landlord was a birdy man, and sometimes they raised a show amongst themselves; and I maintain that you could then, as now, find the true fancier among his birds, certainly not only at the shows; that was his evening's or day's recreation. Now for the similitude. Where do you find the true gardener? Once or twice a year at the shows, and at other times in his garden, either in an old coat or his shirt sleeves, with a spade, fork, pruning or budding knife in his hand, let alone seed setting, but not with a blue bag, chrome, or red ochre.

THE PINK AND GREEN-STRIPED ELEPHANT.

PARASITES ON CANARIES.

A Quick and Easy Way to Clear them.

SIR,—I have cleared a few birds during the last few weeks of this pest, and I will give my method of clearing a bird from them, which is far quicker and less trouble in the long run than any other I have yet seen put before fanciers up to date. We are often advised to use insect powder. I have, and find it is not the slightest use for clearing either birds or cages. As to the way Mr St John advises this week, it would take too long altogether, and the breeding season be half over before a bird could be cleared. If the bird was a hen, this method would never do if it was wanted for breeding. Whoever would keep catching a hen and dusting her when she was in the breeding cage and shortly expected to lay? Now a few weeks since I found five of my Canaries with the grey lice on them—three hens and two cocks. I cleared these birds of the lice at once, and to-day I have looked over them carefully and I have not found one. I had intended to give my method before our Cage Bird Society, and to wash an infected bird before the members; but I think if I give the matter publicity in your paper at the present time it will do more good now than it would later in the breeding season. The way I clear a bird of grey lice (I think that is the best name for them) is to wash the bird by hand in the usual way, and in the last water for rinsing put about two teaspoonfuls of Jeye's Fluid in a quart of water and rinse the bird in this in the ordinary way, and dry as usual. I guarantee that you will not find a single live louse after it is dry, and the bird will not be troubled by them again for some time. As a preventative of disease it is a grand thing, and it will not injure the bird in any way; even where there is a sore on one it will do no harm, but will help it to heal wonderfully. I occasionally spray my birds with the same quantity of fluid in the water, and it keeps them from being troubled by red-mite. If a few drops of the fluid be put in the water for bathing it will answer, and it does not deter the birds from having their usual dip. The fluids that I have used, and I have found them all efficient, are Jeye's Fluid, Sanitas and Killgerm. Any preparation containing carbolic I should avoid. Now to show that this is a genuine way, and that not the least harm will come to any bird washed, I will wash any bird that is infested with these lice for any local fancier, and I will pay value of bird if it should die through it, and any fancier or fanciers can watch it done. I will defy anyone to find any lice after the bird is dry again. They will be seen at the ends of the feathers, dead, and will drop off when the bird preens itself. These preparations are a grand thing to keep your cages free from red-mite, but for the cages I use half fluid and half water. You need not remove birds from cages, as the smell will not harm them at all, and it will not poison them if it goes on their food or sand. It is absolutely harmless. I had a Bolton fancier here the other day (Mr T. H. Cooper), and he saw a pair of birds I had washed that afternoon. Perhaps he will confirm what I have said about it killing the lice. I may say that the hen laid four eggs within ten days of being washed, so this should prove that it has not harmed her in any way.

BUYS A

SOVEREIGN

IN

Valuable Hints

AND

Information.

A man once stood on the kerb of London Bridge offering Sovereigns (real and unadulterated) for a penny each. He couldn't sell one of them and he tried hard. This is not the case with **"Cage Birds Annual."** We offer a sovereign's worth of concentrated experience and knowledge — the filtered secrets of the Fancy — for the trifling sum of **Sixpence.** Our offer is being accepted on all sides. The demand for our Annual increases each year, proving its utility, its indispensability. Such a widely respected authority as Mr. W. E. Greeves declares this week, "that if only every cage bird man would buy the **Annual** there would be no queries to answer!"

Cage Birds Annual

tells you all about the ailments of cage birds and how to treat them; the principles of cage bird management; how to breed Mules or Hybrids, Canaries, etc.

System is a Short Cut to Success,

and one of the first rules in every bird man's system should be to have **"CAGE BIRDS ANNUAL"** always ready to his hand.

GUARANTEEING CLASSES AFTER CLOSE OF ENTRIES.

SIR,—In reference to Mr. L. Brown's letter in your issue of the 26th, I assure Mr. Brown I had no desire to infer a breach of faith in anyone. Mr. Brown now states what he calls facts which were never published. With these, whatever their intention or meaning, we have nothing to do. The facts must be taken and read as they were presented to exhibitors. These consist of the simple guarantee and the rules under which the show takes place. The guarantee, if it meant anything at all, must necessarily mean full prize money. If you strike out the first clause of rule 2, then there would have been no room for complaint, and the statement made by Mr. Carl should never have been published, neither should the statement which appears at the head of the Scotch Fancy and Crest sections been sent to the printers if only half prize-money was agreed upon between the proprietor of CAGE BIRDS and Mr. Brown and his committee. I observe, however, the guarantor has agreed to pay full prize-money to such exhibitors as may have been misled. I am pleased to see this, as it will so far allay feeling and no doubt prevent unpleasant proceedings. But I just wish to say that I shall not accept the full prize-money in any sense given ex gratia, but only what I am entitled to according to the plain and only reasonable interpretation of the guarantee read along with No. 2 of the general rules and regulations under which the show was held. I have never had any doubt as to position taken up, and felt quite sure, from a legal point of view, Mr. Brown's position is quite untenable. I may also say, for Mr. Brown's information, and to show that mostly all the exhibitors in those classes are of the same opinion as myself, that they never expected anything else other than full prize-money. A large number of those have written me, and they have also written him, claiming full prize-money. One would think from Mr. Brown's letter that I had been the only one misled, as he calls it. As already stated, we have accepted what we consider the only possible construction that the notes by the guarantor could convey, coupled with Mr. Brown's declaration in catalogue at top of those classes, that they were guaranteed by F. Carl, proprietor of CAGE BIRDS. We are, therefore, of opinion that those classes should be paid in full. E. G. WRIGHT.

[In the face of the above letter, we have no option but to withdraw our offer to the L. and P.O.S. in so far as it affects Mr. Wright. If he is satisfied of his legal claim, he must, so far as we are concerned, put it to the test. —ED. "C. B."]

ALLEGED CASE OF BORROWED BIRDS AT CREWE.

SIR,—Since attending the last meeting of C.O.S. I have read my letter of March 16th very carefully, but I fail to find anything in it that has not been proved. In the first place, it states the matter was talked about. Now, I think this was proved by the man attending the meeting and making his charge. The next thing it states both secs. had full knowledge, also knew where it originated, and the sec. of C.O.S. has never denied he had as much knowledge as myself. Now, if the man had produced the proofs, the case was a simple one; but I doubt if he has any to produce, although he said he had them in his pocket at the time. But, of course, they were useless if not produced. Now, if I have said or done anything wrong, I hope both societies and the member of C.O.S. will accept my apology, as it is a pity I took any notice of the yarns spun by Mr. Truman. FAIRPLAY.

SIR,—I write on behalf of the Crewe O.S. to make it clear that there was no truth in the case at all. The gentleman who circulated the report was asked to attend the meeting, and bring proof as regards the member borrowing the bird for the Crewe Utility Show, but could give none. We gave him another chance to make a statement in writing to me (the secretary), but instead of doing this, he wrote the man whom the offender had been in the habit of dealing with for all his birds. I also wrote the gentleman with regard to offender, when I could get no statement from the man who circulated this trash. I wish you, Mr. Editor, on behalf of the offender and Society, to publish copy of letter I received. A. WILKINSON.

Copy of letter received April 3rd.

DEAR SIR,—In reply to your letter, I shall certainly attend the meeting of the society and bring full facts of the case you refer to before the member. FROM THE CIRCULATOR.

[Copy of letter received April 21st.]

DEAR SIR,—Regarding the matter referred to in your letter, it is, as far as I know, only a matter of spite. The facts of the case are this. The offender has bought from me a large number of show birds, and the man who circulated the story obtained my address, and came over to buy birds. I sold him a few; then he tried to work sharp practices on me to obtain more, so I refused to have any further dealings with him. He in turn blamed the offender for the occurrence, so the thing is in my mind too paltry for either you or I to mix up in, as the offender has already paid me for all birds obtained from me. I have sold him over 500. Why should he want to borrow, as in my estimation it would throw discredit on the birds I had sold him? You can obtain proof from the man who circulated the statement of his intentions, if he will produce the letter he wrote me last week, which I returned to him with comments written thereon, and referred him to you and offender with his letter. So please ask him for it, as I do not care to enter into so mean a squabble, and in conclusion can only hope you are not blessed with many such members as "Fairplay." Wishing the Society every success.

MORE NEW CLUBS.

DORCHESTER AND DIS. C.B.S.

SIR,—Will you grant me the space to bring before the fanciers of Dorchester and district the desirability of forming a cage bird society for the county? We are probably the only county in England unrepresented. I have the names of several fanciers who are willing to join. Trusting that all fanciers will respond, so that we can call a meeting at some convenient time and place. A. E. PICKETT, junr.

6, Lorne Road, Victoria Park, Dorchester.

CLAPHAM, BALHAM AND TOOTING C.B.A.

SIR,—For some time past a few fanciers in this district have considered the prospects of forming yet another London cage bird society, and as a result a meeting will be held at the Alexandra Hotel, Clapham Common, S.W., at 8 p.m., on Wednesday, May 8th, to discuss the scheme. The support of many well-known fanciers is promised, amongst whom I may mention Messrs. Maxwell, Vale, Silver, Lott, Hathaway and Frostick. Mr. Baker, of Foulser Road, Upper Tooting, an enthusiastic Canary fancier, has expressed his willingness to take the post of Hon. Sec., and I am sure he will not be lacking in energy, the essential for making the new venture a success. It is hoped that the "Eagle" Club, which has run so many successful members' shows during the past four or five years, will be merged into the new society. The objects of the Association will be to promote the breeding of Canaries and Hybrids, and proper keeping and exhibiting of British and Foreign birds. All fanciers and those interested in birds are invited to attend the meeting and give their support, for a good start is half the battle in these matters.

S. A. SANDY.

WEST BROMWICH C.B.S.

SIR,—We have decided to start this society, and arranged a meeting, to which we invited Mr. A. Broadhurst, Chairman City of Birmingham C.B.S., who gave us some good advice. We drew up a set of rules and elected a sub-committee from the members enrolled: Mr. G. Key (Chairman), Messrs. Green, Morton, Bayliss, Beck and Jennings, with Mr. T. Duffield, junr., as Secretary pro tem. With such enthusiasts at the head of affairs, we cannot help being amongst the principal societies at the finish. The committeemen have arranged to visit all fanciers they know to try and induce them and their friends to join us. We expect to have a large muster at our next meeting, which will be held at Green's Refreshment Rooms, Bull Street, on May 7th, at 8.30. The society should provide a long-felt want, and flourish immensely. From the way one or two are bringing up fresh members, we may be fifty strong, as we now count two dozen and have only had one meeting. There was no radius fixed, so we expect to draw members from Oldbury, Great Bridge, Smethwick, Handsworth, etc. The Secretary pro tem. (Mr. Duffield) will be pleased to hear from any intending members and give them any further information they may require. His address is 18, Braybrook Street, West Bromwich.

J. H. JENNINGS.

SPLIT AT KILMARNOCK.

A Cage Bird Society to be Formed.

SIR,—Owing to the harsh treatment meted out to the Cage Bird section of the Kilmarnock Poultry, Pigeons, and Cage Bird Show, at the annual general meeting last Saturday, it was unanimously decided by the Cage Bird section to form ourselves into an Open Show, confined to Cage Birds only. A mass meeting of fanciers will be held at the Ossington Hotel, John Finnie-street, on Saturday, May 4th, at 7.30 p.m., to enrol members and carry on a new Society on our own behalf. All those interested are heartily invited to attend. Should any fancier wish to become a member, please to communicate with WM. WATSON.

49, Glebe-road, Kilmarnock.

NOVEL GREEN-FOOD HOLDER.

SIR,—I enclose you sample of a new watercress and dandelion holder, made from a penny tie clip, and which I find very useful in my bird room, especially so during the breeding season. It is very easily adjusted, and prevents the birds from spreading it over the bottom of cage. After flattening out the ends of the clip, I slightly bow them, so that they won't cut the stalks, and then solder a wire at the back as per pattern enclosed. Any brother fancier could make a dozen of these in about an hour, providing he is the possessor of a pair of pliers and a soldering iron. They would very well repay him for his trouble, being both useful and inexpensive. WALTER LEA.

IS SHE EGG-BOUND?

SIR,—I have a case to lay before your readers, the like of which I have never seen dealt with before, even in CAGE BIRDS. I have a Hen Canary, which has been egg bound for a month. It was too fat when it was timed to lay, and showed the usual symptoms of egg-binding. The usual treatment of steaming and oiling was administered, still the egg was not passed, and just now the egg lies at the right-hand side of the vent, making a huge swelling. I am sure the swelling is not a growth, or anything of that sort, for I have touched it and noticed the shape of it. At first the Canary moped and was very ill, but it is regaining its health, and I have turned it into a large aviary, so that the exercise may keep it thin. I am puzzled on three points:—(1) Why the Canary is still living; (2) where the second, third, and fourth eggs are; (3) why the egg, being where it is, and at an even temperature, has not hatched out. I shall anxiously scan CAGE BIRDS for replies. W. R. S.

THE INDIAN SHAMA.

SIR,—"Chiria Walla," in describing the Indian Shama has, I think, mistaken it for another bird, which I believe is sometimes called a Shama, as it is coloured somewhat like the true Shama, but is a bird more like a Robin or Chat, with a short tail. The true Shama, which is a noted songster, and is imported into this country, is only, I believe, found in thick jungle or forest, and never frequents human habitations. In most parts of India, the real Shama is a very favourite cage bird. My experience of the Shama is confined to Bengal, Behor, and North-West Provinces. It may be that the same bird frequents dwellings in the Punjab, but it seems unlikely. C. HARRISON.

ROSY-CRESTED COCKATOOS AS LINGUISTS.

SIR,—I see you have two correspondents asking about these birds. I am of opinion that if their owners make a fuss and pet them with kindness, they will talk. I have had mine two years this spring. He said nothing the first nine or ten months, but now he can say nearly a hundred words and short sentences; and if any interested persons care to call and hear him, they are welcome, provided they send a postcard to say time of their visit, so that I may be at home. He talks nearly all the morning, and rests in afternoon. He is very tame, and lets all of us fondle him. Of course, we all make a great fuss of him. When a knock or ring at front door occurs he says, "Who's that?" "Meat, meat," meaning the cats'-meat man, and he is still learning. I mean to have another by and bye, and try my luck with it. L. KNOWLES.

18, Meeson Street, Clapton Park.

NOTES ON THE TANAGER IN CAPTIVITY.

SIR,—In reply to Mr. H. R. Davidson, re the ingredients of my food for Tanagers, much as I would like to grant his request, I regret that just at present I cannot see my way clear to do so, for several reasons; but chiefly I would say I am only in the experimental stage myself. Since November last I have had 31 Tanagers, and before mixing my own food I had the misfortune to lose six—three Superbs, one Olive, two Scarlets; but since, I am pleased to say I have had no deaths. Now, I am anxiously watching the effects of this food during the moult. I have already three Superbs, one Olive and one Scarlet hen practically through this trying period, and others well commenced. So far, all appear in perfect health—at any rate, they are as lively as possible—and the Olives and Superbs in full song. Those who have not heard the song of the Olives would be quite surprised to do so. It is a bright cheerful song, and of fair duration. The Olives excel by far both in length and sweetness of their song. I have never heard the faintest song from the Scarlets, only a call note; nor have I yet distinguished either a song or loud call note from the Blues and Browns. I thank Mr. Davidson for his kind remarks. I do not claim to be an expert, only a passionate lover of Foreign birds. I have studied a great number of the imported species, and all the knowledge I have of birds I have acquired from the specimens themselves. My experience has taught me that to be successful in acclimatising delicate Foreign birds one must give them plenty of room, plenty of fresh air and the bath. These in conjunction with good and proper foods, and then leave Nature to do the rest. I shall be most pleased to answer any correspondence from Foreign bird fanciers.

It may also interest Parrakeet fanciers to know that I have every probability of crossing the Red Rosella and Blue Bonnet. The latter is cleaning her nest, whilst the cock bird pays her every attention and feeds her regularly. It is singular to note how the pairing of these birds commenced. Having purchased the Blue Bonnet, I placed her in my Parrakeet aviary. She had not been there very long before Mr. Rosella pays her every attention, leaving his own mate in the lurch, and eventually to give her a severe thrashing, nearly stripping the feathers off the crown of her head. This decided me to separate them, placing the cock Rosella and Blue Bonnet in a smaller aviary (really a portion of the larger one, divided only by ½-inch wire netting), in which I already had a pair of Bloodrumps. I thought they would be safe together until the breeding season commenced. A week or so passed safely by, and then, apparently, the Bloodrumps began to look out their nest box. This was more than the Rosella could tolerate, so he politely gives the Bloodrump cock a thrashing—so much so that, before I could enter the aviary to separate them, he had fatally injured the Bloodrump. I then gave them the whole of this portion to themselves, but still he is most aggressive. Every time another bird flies on the wire netting division he goes for it. In this way he has bitten off the hind claw of a cock Mealy Rosella and the beak off a Budgerigar, and was becoming so vicious that I felt compelled to put a double row of netting between the two aviaries. The old saying is, "All is fair in love and war." They appear to be experiencing both, and, as they are a most handsome pair of birds, I am wondering "what will the harvest be?" O. MILLSUM.

RINGS FOR CANARIES.

SIR,—I have had a lot of fanciers writing to me for the B.R.C.C. closed rings, which I have had to refuse, as only fanciers who are members of the different Roller clubs are supplied with these rings. Non-members wishing to ring their birds should write to the maker, whose address will be found in your advertising columns. I am pleased to say that we have broken the record this season, having issued over 3,000. W. NORRIS.

SELLING SPLENDIDLY.
OUR DELIGHTFUL

Picture Postcards OF Canaries, Etc.

"LIKE A FAIRY TALE."

SIR,—I would just like you to publish these few lines in your valuable paper, as they may be of some use to other fanciers. I am not going to take up space in praising Zam-Buk concerning what it is advertised for, as it can speak for itself, but the below are solid facts concerning what it has done to a few of my feathered pets. About two years ago, I had a Goldfinch in my aviary, which was very lame and unable to put one claw down. It seemed to be in great pain, so I took it out and bathed its feet and legs, and having a tin of Zam-Buk handy, I rubbed its feet and legs with it. I put it back in the aviary, and it was apparently all right next day, and hopping on both feet, and I had no more trouble with it. A few months after, I had a Hawfinch entered for Hartlepool Show, and the day before the Show I noticed it was all fluffed in a ball, and holding one leg up. I moved it and found it was unable to put one foot on the perch. As it had to be despatched that night, I was rather disappointed. I, however, repeated the same performance as with the Goldfinch, and in a few hours had the satisfaction of seeing it hopping the perches as usual, and he won 1st and spl next day. Now, only the other day, my 12 year-old Goldfinch Mule was unable to stand on the perch at all, and was obliged to support itself on the seed box or cage bottom by spreading out its wings, having apparently lost complete use of its legs. I thought its end was near, and put it down to old age. I again tried Zam-Buk on its legs, and before the day was out had the satisfaction of seeing it on the perch. I intended repeating the performance, but it has not been necessary, as he is all right now, and singing away. This may seem a fairy tale to some, but other fanciers can prove my story, and I'm sure if my old Mule could speak, he would gladly endorse my story also. P. C. FORSTER.

Butterknowle, Co. Durham.

THE KEYSTONE OF THE C.B.U.

SIR,—In correspondence under above heading certain reference has been made to Gateshead, both by Mr. MacPartling and Mr. Robson. Seeing that Gateshead is not alone in objecting to rule 17, I say again that it is most unfair to particularise "Gateshead." The correspondence by some writers could have served the same purpose without particularising any society. When writers stoop to personalities it is always an evident sign of ill-feeling, and such contributes neither to the welfare of the Fancy nor yet to the better understanding of each other, and, as there are always two sides to every question, it is a most unfair insinuation to say that the other side are misled. Mr. MacPartling would have readers believe that the knowledge I possess pricks my conscience and upsets my equanimity, as he said nothing about "misleaders." This is another insinuation on his part. I would refer him to his first letter under above heading, wherein he says: "Gateshead have followed the bad example," etc.; "but they have been misled." I suppose next he will be saying that we can be misled without having misleaders. Truly, fair and honourable criticism, this, isn't it?—or, if I may be allowed to use one of his own particular pet phrases, "childish," isn't it? Whatever he calls writing plain, I think the insinuations he wishes to convey are plainly antagonistic both to myself and the Gateshead Society. As he constitutes himself a wall of the C.B.U. on coercive principles, no doubt he thinks he can insinuate coercive principles in other directions as well. But let me tell him there is a limit to insinuations, whether they are meant either for the society or myself; and where an injury is meant suitable notice will be taken of such, and proper precautions will be taken for the refutation of same. I have no wish to restrain anyone from fair criticism, but a judge-and-jury style I have no sympathy for. Whatever construction Mr. MacPartling puts on this phrase of my letter which he has thought good enough to repeat, it was a reply to a general accusation by Mr. J. Robson against secretaries allowing themselves to be patronised, etc., and, as some might take it that the reference applied to me, I gave it a direct misnomer, and added the phrase Mr. MacP. alludes to, and to which, no doubt, he would interpret a meaning of his own. But let that be as it is; it should be a matter of indifference to one who is not a member of Gateshead Society—at least, not a paying member. He may consider himself still a member, but I am neither in receipt of his resignation for 1906 nor yet his subscription, although I wrote him on more than one occasion. He claims he is not an official of the C.B.U., nor is he seeking to be. We can all have our opinion about one who goes past their own representative and rushes to the Fancy Press. Are there more objectors to rule 17? Perhaps yes, and all such are misled; truly a fitting phrase against those that exhibit more birds at one show than he has done all his life—at least, so long as I have known him! I would ask him before he rushes into print again to consider well the honesty of his principles, whether they are prompted by himself or not. There is a wide difference between writing an article on C.B.U. principles and condemning a society as being misled. It is indeed time all such knavish practices were stopped, and, as I have said before, they are neither for the benefit of the Fancy or yet to the better understanding of each other. Is it not a fact that the C.B.U. have put greater hardships on to societies than they can well afford? Some societies, not including Gateshead, have even to pay their delegates' expenses to district meetings, and cannot even learn any business transacted at such—or, if any, of the scantiest. Are members willing to pay to secret societies? T. TAYLOR.

TAKING BIRDS BY SEA.

SIR,—Will any reader who knows say if it is an easy matter to take a few pet birds across on a liner to the United States by a steerage passenger, giving particulars as to how he should proceed about it, and oblige? EMIGRANT.

PREPARING EGG-FOOD FOR FEEDING YOUNG CANARIES.

SIR,—I do not remember having seen in CAGE BIRDS the following method of preparing egg-food. It is the simplest, quickest and cleanest way I have tried. I use a pestle and mortar, grind up not less than two Osborne biscuits to a powder, then add half a hard-boiled egg. Just crush the egg with the pestle and grind the powdered egg and biscuit together. On reading this you will perhaps think it comes out pasty, but stir it up with a wooden skewer, and it comes out just crumbly moist. THOS. SOAR.

CAGING LOST BIRDS.

SIR,—I would like to give you an experience I had last week-end. On Good Friday morning I hung out a Linnet, and about an hour after I was surprised to see a knot of people watching a bird on the top of cage. Thinking it was my Linnet got loose, I hurried up to see what was the matter, and found another bird trying to get to the seed in the feeder. I went into the house to get another cage, but on my return it had flown away, nor did it come back that day. On Saturday morning I hung out the Linnet again about 8 a.m., and to my surprise the visitor of the previous day made his re-appearance, and again tried to get to the seed. So, getting another cage, and putting some seed in the bottom, I placed it on top of the other one. In about half an hour back comes the visitor, who no sooner saw the cage door open than in he flew, and so was captured. On examining my strange capture, I found it was a Linnet who, by its steadiness, proved to have been caged before. It was very dirty, I can assure you, with flying about the house tops in the centre of Manchester. He is now singing stoutly, and is as steady as a rock.—D. SCHOLEFIELD.

THE EXHIBITION POINTS OF A LINNET.

SIR,—I will try to give Mr. King proof of the assertions I have made, as to a Linnet having a light throat. Mr. Houlton gave a lecture on the Brown Linnet before the members of St. Helens C.B.S., December, 1900, a report of which at the time appeared in "Fur and Feather." In this he says the Linnet should show a light underground collar at the neck, the same light underground to continue down centre of breast. Well, then, we will take a more recent date, not so far back as the 1903 Show at Leeds, Mr. K. Last November, at our Stockton Show, Mr. Battye judged Canaries, and Mr. Maddison British, and during personal conversation with Mr. Battye (if that gentleman will pardon me for using his words), he said, pointing to the 1st prize winner, "I like to see the light throat, then I know it's right," this of course alluding to the faking business. This bird was placed 1st by Mr. Maddison, and also stood 1st a little while before this at Middlesbro' under Mr. Battye, and won a great many 1st prizes in the North last season under several judges. F. MARWOOD.

AN APPEAL TO THE CHARITABLE.

SIR,—I beg to appeal through your columns to charitably disposed fanciers and readers on behalf of the family of the late Mr. W. Orme, of Childs Hill, Hampstead (whose intimation of decease appears in another part of this paper). It is scarcely twelve months ago that he was visited with what I might say is the worst affliction that any man could have. In a space of three months he was bereft of two of his youngest children, and a few weeks later the worst blow of all, the death of his wife, which in no small measure is one of the causes of his death. He leaves behind a family of seven, of which the three youngest are unable to help themselves, and it is on the behalf of these poor children, who are left in straitened circumstances, that I appeal to the sympathy of the Fancy. Our late friend first showed Norwich Plainheads at the second Show of the North Metropolitan C.B.A., which I think must be some 12 to 14 years ago, and on the dissolution of that society he became a member of the City and Suburban A.C.B. in 1898. He was also a founder of the London and Counties A.C.B., and was also a member of the North London C.B.A. Knowing him personally for the last nine years, I can say he was always ready to help any deserving cause that lay in his power, and that he was a most upright and honourable fancier. It has been noticed by myself and others that he has been far from well for several months past, but he never gave up until his return from his employment on the Saturday after Good Friday, when he collapsed and took to his bed, which he never left again, blood poisoning having set in and struck inwardly. I visited him only last Friday evening, when the doctor said he was out of danger, and on my next visit I was astounded to hear that he had passed away. I should be very thankful to receive any donations, however small, from any who can help this most deserving case, which I will acknowledge through this paper. I have already interviewed Mr. Wynn, Secretary of the City and Suburban, who very kindly has sent 10s. 6d., and a similar sum in addition, on behalf of the members. Mr. A. Williams, Treasurer of the London and Counties, has likewise sent 20s. to relieve the immediate wants of this distressed family.

R. J. PRETTY.

"CAGE BIRDS ANNUAL"
Is invaluable to beginners in the Fancy

The Rearing and Management of Insectivorous British Birds.

A Paper by Mr. S. W. Birchley, Gloucester, read before the Sheffield C.B.S. on April 4th, 1907.

Brother Fanciers,—Having been asked by your worthy secretary, Mr. Bishop, to write you a short paper on the rearing and management of insectivorous British birds, I have great pleasure in doing so, for if my experience has not been a long one, it has been successful, as far as the various species of Softbilled birds are concerned. No doubt some of you here are acquainted with many of the facts I shall place before you, but I feel sure it will be helpful at least to some. For Hard and Softbilled British birds I have always had a great liking, and have made a study of them in their wild state when they have been visiting this country, as I believe that most of our insectivorous birds are more or less migratory (with a few exceptions, of course although I never took to caging the insectivorous varieties until February, 1906.

How the fever "took" me to make such interesting little pets prisoners was owing to a friend of mine giving me a Bullfinch; and the next bird I bought was a Chaffinch, at a bird shop in London, when I went up to see the great National Show at the Crystal Palace. I was so struck with the lovely specimens there on exhibition, that I felt sure that if others could successfully rear and feed these delicate birds, I myself could do so. I purchased my first copy of a well-known periodical from the stall at the show, and also "pinched" a few specimen copies I saw on a chair. Without the least hesitation I advise every fancier to take the Fancy papers, as most useful articles are always appearing in them.

THE HOUSING CONSIDERED.

Now, as regards the birds themselves and their management: Firstly, as to the housing them, I much prefer a place erected outside to the use of an inside room. If it is within the means of the fancier, he should build his bird-room of double match-board, not less than ¾ of an inch thick, nailed to a morticed framework of 2 in. by 2 in., or quartering of like size, the base being 4 in. by 4 in. red deal. Many fanciers have a top light in preference to a front light; of course, this is a matter of opinion, but, personally, I prefer the latter, admitting at the same time that by having a top light you can use both sides of your room for cages, etc.

My own bird-room is constructed in this way, i.e., three rooms all leading off from one door. The first (and the largest) I use expressly for Softbills, the second one for Hardbills, and the end one for show cages, crates, etc. One very important point to bear in mind is that your floor (which should be composed of one inch boards) should be raised from the ground on bricks, so allowing a good current of air to pass underneath. Another thing particularly beneficial, to my mind, is plenty of fresh air, particularly during the fine, warm weather. For this purpose, I have a wire door, which shuts inside the ordinary one, thus allowing the latter to be left open with safety, providing the wire one is locked. I also like to see all the windows made to open, whether in roof or side, for the purpose of ventilation, but it is always advisable to cover the inside with ½ in. mesh lattice wire in case of emergency.

I think the cages the next matter of importance. These I prefer made of pine, with punch-bar front, with a door; also with a door in the end for passing the bird from the stock to the show cage, and vice versa. For bathing purposes I ignore the old-fashioned hook-on baths, by providing a bathing place at left hand side of cage, making a false drawer some 6 in. wide, to which is fixed a zinc bath. The size of the latter must be according to the size of the bird and the cage itself. To prevent the water being splashed over the floor of the cage, carry your runner on the side where the drawer moves some 6 in. high; hence the water will remain in the bathing apartment. Don't forget to allow, say, ¼ in. play, for the drawer will sure to swell; then it will be easily removed. I do not contend that these baths need always be in use; when not, I dry them out and place sawdust or peat moss litter in the bottoms, and so they are kept clean.

SIZES AND DETAILS OF CAGES.

With regard to the size of the cages for Wagtails, Pipits, Larks, etc., I use a cage 2 ft. 6 in. long, 14 in. deep (from back to front), and 14 in. high over all, so that the bird has ample room for exercise at all times. With Wagtails and Pipits I use four perches, two to three inches apart, and some three inches from floor of cage, for them to walk on, and this I also believe rests them considerably. But for Larks of all varieties I use no perches at all.

For small insectivorous birds, such as Stonechats, Whinchats, Redstarts, Whitethroats, Nightingales, Blackcaps, Wrynecks, etc., the same sized cage will be found best; but put two perches, and those about eight inches from floor of cage, at equal distance apart—not, of course, forgetting to allow for the bird's tail at the ends of cage.

For Treecreepers I prefer a cage some 18 in. to 24 in. long, 9 in. back to front, and some 14 in. high, lined with cloth—green preferred—and with no bark, as the latter is very apt to fray their delicate tail feathers.

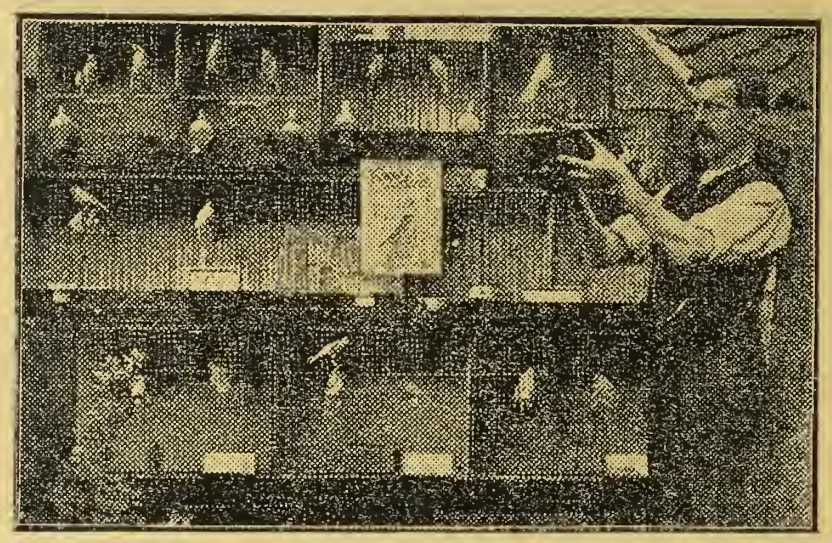
For the larger species, Blackbirds, Thrushes, Ring Ousels, etc., I prefer a cage 2 ft. 6 in. long, 18 in. deep, and 18 in. high, with two perches, and a bath at the end, as before described. I like two doors to each cage, as in all other cases.

To give food in I always use the drawer made of zinc, to push in and pull out at will—for the small birds made some 4 in. long, 1½ in. wide, ¾ in. deep; but for the larger, 4½ in. long, 3 in. wide, and 1 in. deep. Keep all "drinkers" outside, with the exception of the Treecreeper's, which I prefer inside the cage, as they are such delicate mites.

THE "MEATING OFF" OF SOFTBILLS.

I will next endeavour to give you some light on the "meating off" of Softbills. Unless you catch your own specimens, I advise you to purchase birds that are thoroughly well on their food, and not to forget to request the vendor to send you a week's supply of the food the birds have been accustomed to. I think the latter a most important point, as very often it is the change of food, together with strange surroundings, that kills a great many insectivorous birds every year. I am not considering whether the buyer's food is better or worse than the vendor's; that is not the point at all. I hope fanciers will bear this food matter in mind, as it will, no doubt, save many lives. If you catch your own birds, you will find in most cases that if you place some small mealworms in a tin or saucer in the bottom of a cage, and go away, the birds will eat them; but if they refuse, I advise you to feed them by hand, in this way: Cut up two or three of the mealworms, and have a few ants' eggs—not forgetting one or two house flies—close at hand. Take your bird in the left hand and very carefully pass a sharpened match between the upper and lower mandibles, and, when you have opened the beak, place the first finger against the end of it, so preventing it closing, using, of course, the greatest care. Then pick up the various foods a piece at a time on the end of the match and place it well back in the throat; release the beak, and the bird will swallow the food. Continue this until you think it has had enough. I only recommend you to adopt this as a last resource.

I consider that a cage some 8 in. high is sufficient for the "meating" off of Softbills, the same having a linen or canvas top to prevent the bird hurting its head. It is also advisable to place gauze in the front of the cage inside of wire, as this does not hurt the bird. Put water inside the cage, and place the latter in a quiet place for the first day or so, until the bird has got more used to your presence. Gradually wean him off the mealworms to your insectivorous food, carefully watching he does not droop in the meantime.



At the start of the Breeding Season.—Pairing up his Canaries.

THE BILL OF FARE.

The next important item, I believe, is the bill of fare. We all know that the birds I am now trying to deal with feed entirely on insect life in their wild state, with the addition in many cases of fruits, so that we have to provide the nearest substitutes procurable for these. In the first place, I am confident little can be done for any length of time without mealworms. These are expensive to buy, as no doubt you are aware; but at the same time they are a great necessity, particularly in winter, when other insects are not to be had. Gentles, or the maggot of the blowfly, make an excellent food in summer, and they are considerably cheaper. I also use a large quantity of wasp comb, which I find greatly relished, no matter whether what it contains is in the grub or insect state. I would like to mention here, don't over do the gentles or wasp grubs, as the first-named I find apt to disorder the bowels and the latter to be very fattening. These are the three principal live foods; of course, we must not forget smooth caterpillars, flies, spiders, etc., when obtainable. The spider is a really fine thing when a bird is a little out of sorts.

Then we come to the other class of foods—viz., ants' eggs, dried flies, yolk of egg, etc. As to ants' eggs always buy the best, for there is far more nutriment in them, and they are the cheapest in the long run; in any case, don't give less than 2s. 3d. per lb. for them. The dried flies (or, in other words, the Mexican water bugs) you can get in several qualities, like ants' eggs; but go for the best, and see they are free from dust or mould (of course, you can't taste these things like you can canary seed). As to yolk of egg, get the best of this also, or, better still, boil your own—say for 10 minutes—and press through a fine sieve or grater. This, I think, will be cheapest. As a change use best cream cheese, but don't mix this with the food. Place it inside the cage on top of food, if you like, and they will soon find it out; but don't over-do it. Mix the ingredients in about the following quantities:—3 lb. powdered Osborne biscuit to 1 lb. dried flies and ants' eggs and 1 lb. crissel. Keep in a biscuit tin in a dry place. When using, moisten with grated raw carrot, and add just a sprinkling of yolk of egg; also a few currants to the birds that eat them. Mind and not over-do the egg, as I believe it to be not only indigestible but constipating. As a change from the grated carrot I use boiled potato, or watercress, lettuce, etc.

For the Blackbird, Thrush and kindred species I use about another pound of biscuit to the same quantities of flies and ants' eggs, and as a change you will find barley meal, moistened with fresh milk, a nourishing food. Of course, with these birds you can give them boiled potato, table scraps, etc., which they will, as a rule, eat with great gusto, also they will appreciate a few currants or sultanas.

COLOUR FEEDING CONSIDERED.

Perhaps, now I am dealing with foods, a word or two on colour feeding will not be amiss. I find the dark red pepper the best—the deeper, to my mind, the better. When first starting the colour feeding only add a sprinkling to the ordinary food, and gradually increase the quantity of pepper until they are eating their food nearly as red as the colouring agent itself, and so continue until some three weeks after they have apparently ceased moulting. If the pepper is stopped too early the bird will come out blotchy. When discontinuing, do it by degrees, the same as you commenced. I consider the best time to start colour feeding is about the third week in July, but this must be according to the state of the weather.

I have always been much against this practice of artificial colouring, but it is a regular business now, and if you don't feed you don't win. Still, after all, I conclude it is an unnecessary evil, for the beauty of the birds as Nature painted them is superb in itself.

I would like to say one word further re fresh-caught specimens. Beware of the craft that is used to-day when advertising these birds. I know for a fact many catchers advertise birds long before they have them as thoroughly "meated off." When the orders go in they go out and catch them, and put them in the train. Of course, in the majority of cases they arrive in good health, apparently, but only to die next day. If they don't happen to catch any, they very kindly write, and tell you they have sold out, and ask you to wait awhile. I know this is done in more than one instance. I advise every fancier to pay a good price for his specimens, and get them from a reliable source, as there are good and bad specimens in Softbills just the same as in everything else. I consider we should feel highly gratified we have such a kind friend and adviser as Mr. G. E. Weston that we can always write to, and ask any queries relating to our pets. By watching the queries answered by this gentleman week by week in Cage Birds, a great deal may be learned without writing direct ourselves.

HAND-REARING, &c., SMALL SOFTBILLS.

I will now endeavour to give you a few lines as to the various specimens of Softbilled British Birds and their management, which I will divide into sections, as I think this the best way to deal with them. Section I. will apply to the Whinchat, Stonechat, Wheatear, Robin, Wren, Nightingale, Redstart, Whitethroat, Chiff Chaff, Willow Wren, Tree-creeper, and the whole of the various varieties of warblers.

I recommend hand-reared specimens of all these species (if they can be obtained), for two reasons in particular, viz., that they are, of course, already steady and docile, and, secondly, that they are reared on to the staple food they are to be fed with from the first. But on the other hand, if you get wild-caught specimens, with reasonable care in "meating off" and attendance in the matter of the perches, etc., to avoid the swelling of the feet, they are, take them all round, not hard to steady.

(To be continued.)

Many thanks for printing in this week's Cage Birds the obituary of my poor "Peggy," with the photo. Your interesting and instructive paper must be very well known in this district, as many people have stopped me to-day expressing their regret about my loss.—H. Nixon.

ESTABLISHED 102 YEARS.

HINDHAUGH'S

'SPANISH' SEED.

Absolutely the finest the World produces—Boldest and Cleanest.

MONEY CAN NOT BUY FINER.

SPECIAL OFFER:—56lbs. for 12/- Carriage paid in U.K. Cloth bag included gross (excepting Ireland).

This very special offer is made to introduce this "GRANDEST OF ALL SPANISH CANARY SEED" to all bird fanciers and includes delivery to any station in England, Wales and Scotland having through communication with the North Eastern Railway from Newcastle, by goods train.

We quote as follows on rail Newcastle:—

"SAMPLE A"

Finest obtainable Re-cleaned Spanish Canary Seed, 10/- per 56 lbs., 2/9 per 14 lbs. *(Bag free.)*

Carriage if by passenger train (payable by buyer) is only:—(in England, Wales and Scotland)

Above 50 miles and not exceeding 100 miles:—7d. for 14lbs.	11d. for 28lbs.	1/9 for 56lbs.
100 " " " 200 " 10d. "	1/3 "	2/4 "
Over 200 any distance .. .. 11d. "	1/8 "	2/11 "

My Norwich Plainheads.

How I Breed, Moult and Exhibit Them.

By JOHN W. BANCROFT.

Lecture before the Bolton and Dis. Progressive C.B.S., March 5, 1907.

(Concluded from page 374.)

TRAINING THE YOUNG.

After the youngsters are weaned and nicely on seed I commence to run them into the show cage, in order to get them steady for the Nest Feather shows. For this purpose I use a driving stick about 14 in. long, one end of which is 1¼ in. broad, extending up to 3 in. of its length, after which the remainder is narrowed to just under half-an-inch. To teach the bird to run into the show cage, I place same endways, with door open, directly opposite to, and against the open door of the breeder. I then insert the broad or paddle-shaped part of the stick, between two of the wires directly over the top of the door, about the centre of the front. When the broad part of the stick, has passed the wires, I give it a slight twist, in order to cause it to look broadways over the bird. This makes him a little frightened, causing him to hop into the show cage for safety. Patience needs to be exercised for a few times, after which the bird will quickly learn to hop into the show cage the moment you point the thin end of the driving stick towards him. The show cage I prefer for training purposes is similar to the ordinary Norwich show cage, with the exception that it has a door at each end, preferably square. As the bird naturally likes a level surface to hop upon when travelling out of one cage into another, my idea for the two doors is this, that no matter what part of the room your birds may be kept, by having one door at each end you are enabled to have the show cage front facing the light. The birds naturally have an aversion to hop into a cage which looks dark within. At the age of eight weeks I like to put the youngsters on colour seed. In a weak form, of course, at first, as, by this means, their blood will have got well charged with the colouring matter before they commence to shed their nest feathers. Great care must be exercised in regard to the preservation of their flights and tail. To avoid this I place the most promising birds in pairs. By this method there is not the same risk of the birds quarrelling and damaging their plumage.

WHEN TO BEGIN COLOUR FEEDING.

The adult birds I like to get on colour feed about the end of June or beginning of July if possible. Some adult birds drop into moult so suddenly at times that it behoves one to err on the right side and put them on feed too early rather than too late. The latter means the birds coming out patchy in colour, which necessitates plucking some of the feathers again by hand, or "finger moulting," as it is termed. My best adult show specimens I generally moult off singly, commencing with the colour food in a weak form at the start, which I prepare as follows:—To each hard-boiled egg, pressed through a sieve, I add about one gill of stale bread crumbs, also a teaspoonful of soft sugar; mix these together, and add one teaspoonful of the colour feed, adding more by degrees, until I get them on the full strength, which is about four or five spoonfuls. This quantity is quite sufficient for all practical purposes. Given stronger is to waste the colour feed. The quantity of the prepared feed to be one good teaspoonful per bird daily. The colour feed I use is: One lb. of the best hot Natal pepper procurable, to each four lb. of sweet or tasteless pepper. There are several good peppers on the market at the present time, so you need have no difficulty in procuring a good, reliable feed. When you notice the birds are getting their new plumage as far as the neck, which, in the case of a healthy bird means nearing the completion of the moult, the colour feed should be gradually decreased in strength, or there will be a tendency for the bird to come much hotter in shade on the neck and head than on the rest of the body. For seed, I place canary in the hopper, on top of which I sprinkle a good layer of linseed, which assists in imparting the gloss and bloom to the feather. Some fanciers tell me that they cannot get their Canaries to eat the linseed, but I have never met with this difficulty with my own birds. Two or three times a week during the moult I place a little pure sulphate of iron in the drinking water, about the size of a split pea. This helps to fix the colour, and tends to keep the birds from getting loose in the bowels. I also stretch a piece of unbleached calico across the window of the bird-room during the moult, and right through the show season, so as to exclude the strong rays of light, as strong light has a tendency to bleach and take the colour out of the birds.

PREPARING THE BIRDS FOR SHOW.

Right through the moult I like the birds either to have a bath or a good spray daily. This helps to tighten and harden the feather and brace the bird up. When almost through the moult I commence to run the show birds into the show cages, two or three times a week, allowing them to remain there for about half-an-hour at a time. This gets them steady, and invites confidence. For it is useless for anyone to send a bird to a show which is at all wild or nervous. This does not give either the judge or the bird a chance. I generally wash my birds five or sir days before sending to a show, spraying them once only, afterwards, and this on the second day after washing. This gives them a chance to get fined down, and regain the bloom we all admire so much on a good show specimen. After washing, I give the bird a good pinch of maw seed, as this helps to counteract the tendency to looseness of the bowels which the birds seem to have after a tubbing. Show your birds in a proper show cage, a good bird is worthy a good cage, and send them off so as to arrive at the show-room the night previous to the show, as by so doing you give them a much better chance to arrange their toilet and get settled down nicely before judging takes place. Show them spotlessly clean, in clean and perfect cages. If you don't win a prize, or even a minor card, the first time of asking, don't get discouraged, nor yet lay all the blame on the poor judge, but remember that there are many who have had to plod on for years before they have reached their desired goal, the winning of premier honours at an "all England" show. Make up our mind to place something better before the judge, keep plodding onwards, and sooner or later success is bound to crown your efforts. I would strongly advise all who take up the breeding of the Norwich Plainhead to join the Norwich Plainhead Club. The subscription is only 2s. 6d. per annum. There are many benefits to be derived by joining the club, as it caters for the amateur and champion alike. The secretary is Mr. J. Raynes, of 9, Richmond-road, Chorlton-cum-Hardy, Manchester, who, I feel sure, would be very pleased to furnish any intending member with particulars of the club, should they care to write him. My views may not, perhaps be quite in accordance with those held by some of you, but I can with every confidence commend them to your earnest consideration, as being at any rate practicable and workable, as proved in my own experience.

STRAY NOTES ABOUT BIRDS.

By CLAUDE ST. JOHN.

ARE BLACK MEALWORMS WHOLESOME?

Most fanciers will probably wonder whether this is a new species about to be foisted upon them. Their existence is, as a rule, simply ignored, but a modern writer lately falsely accused me of denying the existence of Black Mealworms, and at the same time wrote of them as though they were a distinct species. As a matter of fact, black specimens may be found in almost any box of mealworms, and the more densely a box is stocked the more black specimens will be found. Personally, I regard them as unhealthy and diseased specimens. This "turning black" occurs at all stages of growth in the larva, and also in the pupa stage, but it is, I believe, invariably a prelude to death in both stages. I never yet discovered a pupa which became black that ever progressed any farther, or became a beetle; neither did I ever find a black mealworm which lived to become a pupa. After the blackening process begins the larvæ show quite plainly that something is wrong with them; the shape of the whole body alters before they die, and instead of the round cylindrical body they become flattened out, so that the under surface is often perfectly flat. Whether they are really wholesome food for the birds I do not profess to say, for the simple reason that I never use them myself, as, when I come across any of them, I prefer to dispose of them in the kitchen range than run any risk by giving them to birds for food. Of course, this may be wrong, but if any fancier habitually gives these worms to the birds it would be interesting to learn whether they produce any effect on the birds, and also how they are appreciated by them.

CAGE BIRDS I consider the grandest paper ever produced for our Fancy, and I am sure it must always be advancing the "cause." I wish it every success.—BERNARD C. BRIARS (Enfield).

MULES NOT WORTH TRYING FOR.

That the average bird breeder is endowed with patience and perseverance above the ordinary is a trite truism; that he is also gifted with a fair share of sanguine imagination is evidenced from the feats—the impossible feats I had nearly written—one often sees the would-be Mule breeder trying to perform. But imagination nor enthusiasm should be allowed to run away with common sense and one's better judgment, by leading one into pursuits where all efforts are just so much wasted energy which might have been more profitably employed in other directions. One often reads of fanciers, generally enthusiastic novices, intending to try, or trying for, practically hopeless Mules, but when a friend, who had an uncommonly fine singing Skylark, gravely informed me of his intention to mate it with a hen Canary, as "it ought to throw some fine singers," I was more than ever convinced of the sheer folly of the mistaken pursuit after phantoms of the imagination, for it is nothing more than this, and an absolute waste of useful time. I am far from discouraging experiments or trying to produce something new, but there is a limit in these matters beyond which it is folly to go. All the perseverance and enthusiasm in the whole world will probably never be rewarded by Hybrids between two species of widely differing genera, different families, or orders, or where the structural differences are very marked. A word to the wise is sufficient. Why waste valuable time in pursuing a will-o'-the-wisp?

BRITISH BUNTINGS AS CAGE BIRDS.

It is a strange fact that our British Buntings do not seem so successful as cage birds as the more purely insect or seed-eating species. It is a pity this should be so, because the genus not only contains such handsome birds as the Yellowhammer and Black-headed Bunting, but includes some of the most charming cage birds imaginable. The Reed Bunting, for example, though possessed of no brilliant hues or fine song, is such a tame and familiar creature as to make it quite an ideal pet. The difficulty of keeping them is probably entirely due to the food supplied. They require more insect food than is generally supposed. Oats they seem to prefer to almost any other seed, especially when first caught, and these and canary should form the principal items of their seed diet, with a little hemp, millet, and rape added as a variety. Soft food as given to insect-eaters they will often eat freely, but seem to prefer crushed dry biscuit. In the absence of the other insect food, mealworms may be given freely. Indeed, they prefer these to anything else, and are so fond of them that I have seen a Reed Bunting devour seven in rapid succession, and then, like little Oliver, ask for more. The moral is: Do not be too sparing in insect food if you wish to keep Buntings successfully in captivity.

DO PIN-HOLED EGGS HATCH?

This is a question we have had propounded lately. In my opinion, if the membrane underneath the shell is penetrated so that the albumen shows moist on the surface, it is rarely, if ever, that a bird's egg would hatch. The chances are all against it, as once the shell is damaged, be it ever so slightly, it is greatly weakened, and rendered much more liable to further damage, besides the great risk there is of the moisture on the shell adhering to the hen's feathers, the bottom of the nest, or one of the other eggs in the nest. In the former case the hen usually carries it with her when she leaves the nest and accidentally completes its destruction, and in the other case the pin-holed egg is not always the only one in the clutch that comes to grief. Slightly cracked eggs of fowls and pigeons have been safely hatched by sticking a piece of gummed paper, such as the margin of a sheet of postage stamps, over the fracture. But in these cases the shells are hard and strong, and the efforts of the chick at hatching time proportionately powerful, in striking contrast to the fragile shell of a bird's egg and the puny efforts of the chick, so that if this plan was adopted and the process of incubation completed, it is doubtful whether the chick of a Canary would be able to break its way out of its prison.

CHANGE AND CHANGE ABOUT.

Was it not Charles Dickens who put this apt phrase into the mouth of the immortal Sairy Gamp when she hoped to enlist the services of the contemporaneous Betsy Prig? Anyway, it might well illustrate the most approved method of mating for colour as is usually done among the best Canary breeders, and which would doubtless be as useful in mating up any other birds if—and it is admittedly a very big "if"—one could only be as sure of their parentage. Thus, as is well known, except for some special purpose, yellow is mated with buff, but it is not equally well known that many expert breeders prefer to cross the colour, so to speak, by mating, say, a buff cock bred from a yellow cock and buff hen, with a yellow hen bred from a yellow cock and buff hen, and vice versa. Enthusiastic fanciers of British birds hold that in most, if not all, species of Britishers there exists the two types analogous to the yellow and buff type of Canary. Perhaps some day we may be able to turn the knowledge to account, but we shall first have to breed our stock of British birds in captivity—a feat that is certainly not impossible.

Use our Picture Postcards.

THE CANARY BREEDING SEASON

Is now with us and everyone who contemplates cultivating Canaries for pleasure or profit, should immediately procure the Standard Work on Canaries :—

HOUSE'S CANARY MANUAL

PRICE ONE SHILLING. Post Free 1/2.

Superbly illustrated by the Champion Canary Artist, Mr. H. NORMAN. EVERY BIRD DEPICTED IS A VERITABLE MODEL, and shows the breeder what to aim for. Some idea of the popularity of this Practical Manual may be gathered from the fact that under the title of "The British Canary," it has passed its Third Edition entering upon a Fourth Edition of 5,000 copies under the new title of "HOUSE'S CANARY MANUAL." The following Summary of Chapters, etc., will show you how completely the ground is covered:

Aviaries and Cages.
Show Cages.
Perches.
Breeding Canaries.
The Young Birds.
Food for Nestlings.
Hens Refusing to Feed.
Sweating Hens.
Young Birds Dead in Shell.
Red Mite.
Clear Eggs.
Moulting.
Exhibiting.
Diseases (treated very fully).
Every variety of Canary is treated upon at length and illustrated.

Mr. HOUSE has thoroughly revised and brought this work up-to-date and incorporated a chapter on the "Roller or Singing Canary."

Send 1/2 now and secure a copy hot from the press.

F. CARL, 154, FLEET STREET, LONDON, E.C.

THE LANCASHIRE CANARY.

By C. A. HOUSE.

A Lecture delivered before the London and Counties Association of Canary Breeders on April 25th.

(*Continued from p.* 398.)

I will now endeavour to describe to you the stamp of bird which is required, and also give you a few hints how to breed it. The Lancashire should, according to the standard of the L.L.F.A., be a large bird combining length with stoutness, and when in position on the show bench should possess a bold, fearless, dare-devil appearance. The coppy, and mind you it is a coppy, not a crest, is not round like unto the crest of a Crested Norwich, but is of horse shoe shape. Commencing immediately behind the eye, it should lay close and flat to the skull and present a good, broad front. It must not droop, but run out flat from the centre, and slightly dip at the edges. The centre, like that of the Crested Norwich, must be clear and distinct, and the coppy must radiate evenly towards the sides and front. The back of the skull should be broad; narrowness of back skull is a great fault, and the feathers at the back behind the coppy should lie close and thick, there must be no roughness. The neck should be long and thick, the head standing well away from the shoulders. This thickness of neck is a most important point, and one upon which the Lancashire breeders lay much value, because a narrow-necked Lancashire, however good it may be in other respects, fails to convey to the eye that impression of stoutness and massiveness which should be the first thought conveyed to the mind of the person looking at a Lancashire. A broad, stout neck generally means plenty of substance and width of shoulder, with corresponding depth and stoutness of chest; viewed from the side the chest should be deep through, and from the front it should look broad and massive. The side should possess plenty of length, so as to carry the wings evenly. This length of side is an important point when one comes to consider carriage, and the Lancashire is a bird of carriage, as you will presently see when I give you the standard, with the relative value of points given to the different properties. The wings themselves should be long, nicely folded, and meet evenly over the bottom of back and tail; there must be no crossing, nor, on the other hand, must there be drooping or slackness of the wings. The back should be broad and full and give the idea of great strength; a hollow or weak back is a great fault. The tail of the Lancashire is also important, because it is the finishing touch, and a short, broad tail, or loosely feathered and loosely carried tail spoils the elegant appearance the bird should possess. When in the show cage the Lancashire should stand free and easy, in an erect and graceful manner, showing well its mammoth proportions with boldness and confidence. There must be no sluggishness about it, no hugging of the perch; a crouching Lancashire is an abomination. The whole pose and carriage of the body should bespeak ease and elegance, for the Lancashire is a bird of position. Its legs should be long, set well into the body, and show more substance and strength than those of other breeds. Owing to the great length of tail a real tip-top specimen when in the show cage does not give the straight appearance seen in the Yorkshire, but owing to the slight droop which the tail gives there is a gentle curve in the shape of the body, giving it the appearance known to some of you who are Yorkshire breeders as "hooky." Although there is this slight curve the body of the bird is practically straight. It must not stand across the perch. The body should be covered with an abundance of long, broad, feathers, as this adds considerably to the massive appearance of the bird, yet at the same time there must be no coarseness or looseness; the feathers must lie close and tight to the body, feathery thighs are no more to be desired in a Lancashire than in a Crested Norwich.

THE COUNTERPART OF THE COPPY.

Equal to the coppy in all respects is the plainhead with the exception of the head. The body should be the exact counterpart of that which I have described for the coppy. Very important is it that the head of the plainhead should come somewhere near to standard requirements, for of the Lancashire Plainhead, as of the dairymaid, it might with truth be said its face is its fortune. The head should be broad, almost flat, and fairly long. It should not possess the rise which is desired by Crest breeders, the dome-shaped skull is not wanted in the Lancashire, its skull needs to give the appearance of flatness. The eyebrows should be stout, thick, long, and overhanging, giving the bird a ferocious, cruel-looking expression. The Crest breeder speaks of "browing," but the Lancashire breeders generally speak of "the lashing." The top of the head should be covered with dense, close, long, broad feathers of good quality, so that they lie close and compact; harsh, wiry feathers are apt to break and stick out, and thus destroy the beautiful contour of the skull. The back of the skull should be full and broad, not "tucked or whipped up," to use the words of the standard. I will now give you the standard points as given in the L.L.F.A. standard of perfection. From them you will gather that although the Lancashire, as becomes the giant of the Canary family, must possess strength and massiveness, it is also equally desirable that length and style should predominate.

THE STANDARD.

Head, 30; neck, for fullness and thickness, 10; back, round, full, and long, 10; length of bird and substance, 25; upstanding position and type. 15; condition and cleanliness, 10; total, 100.

ARE THE YELLOWS FALLING AWAY?

In breeding the Lancashire the lines followed are similar to those followed in the breeding of Crested Norwich, except that double-buffing is not so largely resorted to. The Lancashire breeders do not overlook the value of yellow blood, and the majority of the birds are paired yellow to buff or buff to yellow. In this respect I may mention that, in connection with the recent talk about deterioration it has been said that there has been a big decline in yellow Lancashires, that they are not so good as they used to be, and will not compare favourably with their lighter-coloured brethren, the buffs. This I cannot agree with. For some years now I have judged the Lancashires at the great show of the season, that held in the Rochdale Town Hall. Not only is it the show of England, but it is the show of the world so far as Lancashires are concerned. Year by year birds are shown at Rochdale which far excel those seen at any other show, and not only in quality, but in numbers, too, does Rochdale hold the palm. Now, in judging Rochdale Show, if one thing has struck me more than another, and made great impression upon me, it has been the splendid quality of the yellows, and on several occasions have they secured the specials over the buffs. At last year's show the ticked yellow Plainhead of Mr. Barrass which won is, I should say, the finest of its kind ever seen. It could beat many buffs. The same gentleman's two winning yellow Plainheads, and his ticked yellow Coppy, were also birds of wonderful quality, as were the birds shown by Messrs. King, Garner, Mills, Oldham, Cundiff, Butterworth, and others. In the Coppy hen class Mr. Butterworth's winner was a yellow, and Mr. Garner's third and fourth were both yellows. In a class of 14 Plainhead hens Mr. Barrass's winner was a yellow, as was Mr. Mill's third; whilst in a big novice class of 13 Mr. Heap's winner was a yellow Coppy, and Mr. Jones' second was a yellow Plainhead. To come nearer home, I may say that the Bristol challenge bowl of last season was won by a yellow Plainhead, and what about Mr. F. J. Green's yellow Coppy, the Palace winner? Southern yellows and Northern ones, too, are good. Gentlemen, these are facts which cannot be disputed, they are recorded in the annals of the Fancy, and I think you will agree with me they prove that the yellow Lancashire is still a power in the land.

A GOOD VARIETY FOR THE NOVICE.

In this and other metropolitan societies there are a number of novices struggling and pushing to get to the top in Yorkshires or Norwich, and the struggle is great because of the numbers similarly engaged. To some of these I would suggest they could find an outlet for their energies by taking up the Lancashire, and at the same time have far greater chance of having their names enrolled on the scroll of fame and becoming known as winners of specials, because a real good Lancashire is a noble bird, and, properly shown, takes some getting by when specials are being considered. In the breeding of Lancashires, considerable patience is required, and to anyone starting in the breed I would say, buy young birds, hold them over the first season, let them grow in size and strength, and you will be well repaid. The growing of the mass of feather which it carries takes a great deal out of a Lancashire, and if it is given the first 12 months of its life to do nothing but eat, drink, sleep, take exercise and grow, it will do it, and thrive upon such treatment. Breeding takes much energy out of a bird, and the nervous excitement attendant on breeding prevents that full development of the body which is so much desired. On no account buy old birds if you want to breed Lancashires. There is no sense in buying a fine, massive-looking bird simply because it is a giant and has a good list of wins attached to it. Old birds are not the sort to build up a strain.

PREFERENCE FOR PLAINHEAD HENS.

In purchasing stock I should advise you, if possible, to select yellow Coppy cocks and buff Plainhead hens. My chief reason for so advising you is because so much depends upon the hen, and the young hand in buying can, as a rule, select a Plainhead easier than he can a Coppy. Again, the head properties follow the hen more than the cock, and, as substance and strength of skull is required, it is wise to obtain it on the hen's side. If two buffs are paired together there may be increased size and feather, but there will, as in other breeds, be a loss of quality, and, further, birds which are bred from a strain in which double-buffing is resorted to with frequency lose that smartness and style which is so important a feature in a show Lancashire. There is no need for me to say more as to the actual breeding of Lancashires, excepting that the head must be flat and not dome-shaped, and that length of body is also a great consideration in the stock birds. The breeding should proceed on very similar lines to that of the Crested Norwich. Time does not permit of my going into detail and describing the different stamp of birds to mate, but look to your hens for substance and stoutness of head and body, also length of body, and to your cocks for style, feather, and length, and you will not go far wrong, but ever remember that the Lancashire is a bird of length and style, and not substance only. As a final word of encouragement I would say the success which has attended Mr. Green should be an incentive to other South country breeders to take up the giant of the Canary family, and should act as a spur to the attainment of the highest honours for southern-bred Lancashires.

For Good Luck?

A Robin has built its nest, which now contains four eggs, in an inverted horseshoe which hangs in a hawthorn hedge near Middlesborough-on-Tees.

Curious Love Note.

Woodpeckers, says a writer in an English magazine, are now busy boring holes in trees for the purpose of nesting. That loud rapping noise which we hear in the woods is not noise caused by the Woodpecker actually chipping away wood from the tree, but it is nothing more nor less than a call-note, or a sign of communication between the male and the female.

Only £2,100!

The Hon. Walter Rothschild writes to the Press to contradict the statement that the preparation of his sumptuous work on "Extinct Birds" has cost him £20,000. He says:—The preparation of this work has not cost even a fourth of that sum, and the actual printing of plates and text will only amount to £2,100. Of course, the actual value of the various collections in the Tring Museum is a quite separate item, which ought never to have been included in the estimate of cost, as they were got together for other purposes than the preparation of this work.

Increase of Woodcock.

Ardent sportsmen tell us that there has been a considerable increase in the number of Woodcock visiting these shores this season. There was a time when these birds were exceedingly plentiful, and it is on record that over 100 brace were killed in one day in a wood in Norfolk, and a certain Earl killed 50 brace in one day in Ireland. Since those times the numbers have gradually diminished, and one might now go through several seasons without seeing a single bird. The Woodcock is one of our most interesting species, and one that we know very little about.

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. It kills all insects, harmless to everything else.

THE YOUNG NATURALIST.

Prizes of 1s. and two of 6d. each will be given for respectively the best and two second best cuttings or original bits about birds. Competitors must be children under sixteen years of age. All efforts must be briefly and clearly written, and ON ONE SIDE OF THE PAPER ONLY.

Two stars indicate the Winning Contribution; one Star the runners up.

* * A Blue Jay.

My aunt, who is a lover of birds, and an interested reader of CAGE BIRDS, has a Blue Jay, called Jack, who is very artful and knowing. He is six months old now, but when my aunt first had him she was obliged to take him everywhere with her and sing him to sleep; but now he does not need this attention. We all call him a miser, because when he is given anything he will save it, and not eat it until he is obliged, or when he is alone. It was amusing to see him when he first saw the snow. He kept saying, "Who are you?" If you do not give him immediately what he requires, he will make a most peculiar noise. My aunt has many other birds, and Jack will imitate all their voices. The cat was lying upon the table by Jack's cage, and he flew down, bit the cat's fur and jumped upon his perch roaring with laughter. My aunt has taught him to laugh, and you cannot detect which one is laughing, because they laugh so much alike. At the back of the house there is the railway, and Jack will imitate the sounds of the trains and remarks made by the men. Once my aunt offered him something to eat from her mouth, and he put a large blue-bottle fly in her mouth. I suppose this was his way of showing his gratitude, and thought that my aunt enjoyed flies as much as he did.—LILY SUTTON (age 13), 12, Chelsea Park, Chelsea Road, Easton, Bristol.

* My Little Twites.

Last summer my father and I found several nests of Twites. We took home two nests of young birds. We brought them up on hard-boiled egg and oatmeal, mixed very fine. We did not lose a bird, and now the cock birds are nice singers and very tame. They like to get their cage doors open to get a fly outside in the bird room. When giving them seed, if you cheep with your lips, it starts them singing. They love dearly to have a bit of a flight chasing one another about the bird room. When at liberty, sometimes, we put a large basin on the floor to give them a bath. As soon as the water is poured in they hop on to the side of the basin and then into the water. They do fairly splash the water about with their wings and tail till they are properly wet. Afterwards they fly about from perch to perch till their feathers are dry.—Sent by FULTON BARR (age 12), 646, Rochdale Road, Walsden, Lancashire.

* The Siskin.

The Siskin is often called a wild Canary, and is certainly one of our prettiest as well as smallest Finches. Its principal colours are green, black and yellow, and it is a very desirable cage pet, being very tame and familiar, and having a very pretty song. It visits us in early and late winter on its passage to and from its usual haunts among the pine forests of the North, and has occasionally stayed and bred with us.—EMMIE GLADYS BOND (age 14), Clent View, Beecher, St. Colley Gate, Cradley, Staffs.

FOREIGN BIRD ITEMS.

By F. Z. S.

SEED-EATING TANAGERS.

I see a recent writer in CAGE BIRDS talks of a "Brown Tanager" in his possession eating seed. This must be a hen of the Black, or the Crowned Tanager, both of these species being to a great extent seed-eaters; they crack the seed just like Finches, and will live on it for quite a long time, though it is, of course, not advisable to confine them entirely to such a diet. The hen of the Black Tanager, by the way, is bright chestnut or tan, that of the Crowned species a dull brown. The males are black in both cases, but the Crowned Tanager can be distinguished by his scarlet crest, though this is commonly concealed by the side feathers of the crown. To people who admire the smart appearance of Tanagers, but are deterred by their need for soft food, these seed-eating species can be recommended. There is, when one comes to study the Tanager family, a complete gradation from seed-eating forms hardly separable from true Finches, to birds like the Violet Tanager, which are complete "Softbills," and have no gizzard.

THE SNOWFINCH.

Although it has recently been placed on the British list, having occurred in our limits, the Snowfinch (*Montifringilla nivalis*) is still practically a foreign bird, and the offer of some for sale is not without interest. It is an Alpine bird, and usually keeps at high levels in the mountains, near snow-fields, whence its name. In appearance it at once suggests the Snow Bunting, having, like that bird, long black and white wings and a black and white tail, and black legs; but its plumage above is duller brown, with a grey head, and it does not exhibit the marked seasonal change found in the Bunting. Moreover, it has a very different bill, much like that of a Chaffinch—to which bird, not to the Bunting, it is really related. A good many years ago they had a specimen of this bird at the London Zoo; it was allowed to live in the big central compartment of the western aviary, where it often attracted my attention by its graceful flight, for it seems to be a much livelier bird than the somewhat sluggish Bunting.

THE PRODIGAL PEAHEN.

The London career of Juliet, the Peahen which escaped in Covent Garden and was so much paragraphed in the Press in last year's "silly season," came to an end only a few weeks ago. Living on the roofs, and fed on the window-sills by sympathisers, who were always ready with the proverbial crust of bread and cup of cold water, she defied recapture all through the autumn and winter months. Even at night she was too wary to be surprised, but would fly to another roof some distance off. An attempt made to intoxicate her failed; not that she had any objection to getting drunk on whiskified grain, but because, when the fumes of alcohol began to overpower her, she prudently retired to an inaccessible roof. Her downfall as a free bird came accidentally. She was disturbed one night, and flew on to a window-sill she knew of old. Alas! the window was gently opened a little way, and a stealthy hand grasped poor Juliet! However, it is satisfactory to hear that she has now been disposed of, and has found a home in the country. Incidentally, she has given some idea of the wariness by which so big a bird as the Peacock manages to "rub along" with various foes in its native Indian jungles.

ILLUSTRATED IDEAS

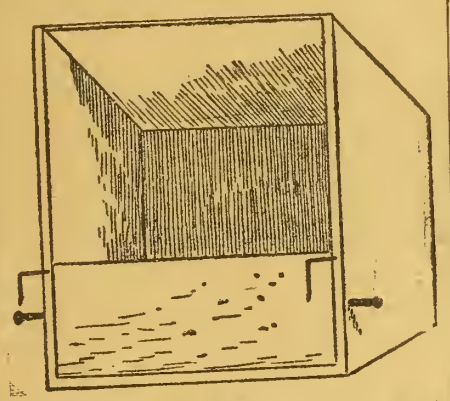
Under this heading we shall illustrate weekly some idea useful to the bird-keeper. Readers are invited to send us particulars of any novel and practical appliance of use in our hobby, either in cage, bird-room or aviary, with a rough sketch of same where possible. Every "Illustrated Idea" used in this column will entitle the sender thereof to a postal order for two shillings and sixpence.

No. 97.

EASY METHOD OF ALTERING FOOD BOX.

Sent by W. Cripps, 84, Creek Road, Deptford, S.E.

I enclose sketch of an easy method of altering food box of Thrush cage, that it may be easily cleaned out. Sketch is of ordinary food box. Remove wood marked B and take



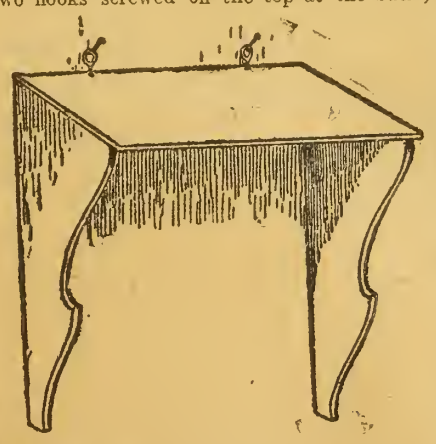
out nails. Drill two holes where nails A A are shown, replace B, but don't nail it in. Put two round nails through holes and drive them into B. B will then turn and the box can be cleaned out thoroughly.

No. 98.

BRACKET FOR CAGES.

Sent by W. Bradshaw, 110, Cemetery Road, Southport, Lancs.

This is a sketch of a bracket, which I find very useful for holding cages in my bird-room. The top piece should be about 6 in. wide, and nailed on the two side pieces, then two hooks screwed on the top at the back;



these will fit on two screws in the wall. With a bit of paint your bracket is complete. It can be made any length, to hold different numbers of cages, and if made proper looks very well and will hold a good weight.

All communications for this column should be written on one side of the paper only, duly authenticated with the name and address of the writer, not necessarily for publication, and sent to H. Norman, Editor, "Wild Bird Life," "Eastcote," Alma Road, Carshalton, Surrey, by Monday in each week. Original observations and records invited.

Busy Birds—Nightingale Melody.

A townsman taking his first spring walk in the country would quickly realise how far we have advanced towards summer. The hedgerows are clothed with tiny green leaves, spring flowers are abundant, and a wealth of blossom covers the trees in the orchards and fruit plantations. Bird music can be heard upon every side, and the incessant clamour from the tall elms where the colony of Rooks nest, indicates the advance made by these early birds in perpetuating their kind. Somehow, Rooks always appear to me to be most anxious to get this business of rearing young ones over and done with, there was haste in building and patchng up the winter-worn homes, and when the eggs are laid, the bird at liberty is constantly visiting his mate, with a good deal of cawing and croaking, as though telling her plainly to hurry up, and now the noise is deafening, such rushing to and fro, and flapping of big black wings, with an incessant flow of Rook talk, for every fresh arrival from the fields is greeted with noisy chattering, and this goes on repeatedly; for father rook is kept busy, he is anxious to get this business over, so that he can take to his old roving life of the fields.

Already I have seen young, fully fledged Thrushes, with the innocent stare indicative of babyhood. No bird that I know of has quite the baby look of the young Song Thrush, with his pale beak pointing upwards, and head between his shoulders, he faces one with such a look of wonder in his big eyes that a mere novice could never mistake him for an adult bird, and yet with all his innocency he is quick to take cover when threatened, and seldom ventures far into the open, for he is some time before he can use his short wings to fly any distance.

Now is the time to listen to the glorious music of the Nightingale. In favourable localities every copse and spinney echoes with his melody, the cock birds are nightly engaging in a veritable battle of song. So interested are they in their own outpourings that one may easily get within almost touching distance. The bird, you see, is answered by another close by, while others may be heard singing in the distance. Upon a still night one may stand and listen to some half-dozen birds. In some plantations, where the ash poles grow thickly and straight, the sound appears to be increased in volume, as though the trees were playing the part of a sounding board; when one is fortunate enough to hear a really good bird performing in such a situation, the music lingers in the memory, and makes one wish that the spring months and the Nightingales stayed longer with us.

We have been looking for the elusive Grasshopper warbler, but although we have carefully searched the accustomed haunts of these shy birds, we have not yet been able to catch a glimpse of one. We see by our notebook that we saw him last year upon the 16th of the month. Either these are late in arriving or they have possibly sought some more sheltered position.

THE MARTIN.
A Feathered Blondin.

A few Swallows are skimming about the country, but neither they nor the Martins have been seen here in anything like their usual numbers. In fact, we have only seen just sufficient to attract our attention, and to record the incident; possibly the whole army of these birds of the air have not yet reached our shores. One pair of Swallows are evidently the same birds as made their home here last year, for they have been seen frequently flying in and out of the wood shed where they nested last season; it is quite evident from their behaviour that they arrive here in breeding condition, and are only waiting for more settled and warmer weather to commence operations.

Most of us have listened to the Cuckoo, and heard the cry of the Wryneck; we are waiting for the fluttering Flycatcher, bold Shrike, and gentle Turtle Dove. When these arrive we can truly say that summer is here, and that all our migrants have returned.

NOTES AND QUERIES.

Crows in London.

There can be no doubt but what the Carrion Crows have increased considerably in the London district. They are able to nest and rear their lusty young ones in our midst with impunity—in fact, they are much safer here than in quite rural districts, for the watchful gamekeeper numbers them among his worst enemies, and that means destruction to the nest and old birds whenever they are unfortunate enough to be discovered. In the London parks these birds do considerable damage to waterfowl, for they are quite unable to resist the tempting looking eggs. As crows increase, the Rooks decrease; they are gradually moving further into the country.

Song of the Chiff Chaff.

While standing at the top of Reigate Hill listening to the birds, and admiring one of the grandest views in the south, a busy little Chiff Chaff was noticed searching diligently among the slender branches of the underwood. He would occasionally stop and sing his peculiar little song. This varies a good deal in individual birds. I jotted down the song of this little fellow, which sounded as follows:—"Chiff chaff, chiffy chaffy, chiffy chiff." This he repeated several times, occasionally making it a little longer or shorter, sometimes quite omitting the "chiff chaff." While performing he puts a good deal of energy into his song, swelling out his throat until it is almost as big as his tiny body. The Chiff Chaff is rightly named. No one could fail to identify the bird if they heard him sing.

Concerning the Cuckoo.

Can you tell me how many eggs the Cuckoo lays in a season? I saw in one Welsh book that it lays about 15. Is that number right or wrong? The Blackbird and Song Thrush build their nests of the same material, and both have the interior lined with mud. Is there any reason for the fact that the Blackbird has a layer of dry grass on the mud?—WELSHMAN.

When one considers the wandering life of the Cuckoo it appears impossible for anyone to be able to say definitely the number of eggs laid by one female in the course of a season. Various numbers have been recorded, most of them being based upon the number of eggs found in a given district. Birds produce eggs in batches, and as they ripen they detach from the bunch, are coated with shell, and deposited; generally speaking, the larger the bird the smaller the number of eggs produced. I see no reason why the Cuckoo should be an exception to the rule, although an eminent German Oologist puts the number at from 17 to 22. Respecting the difference of lining of the nests of the Blackbird and Song Thrush, this is just one of those natural subjects upon which one can hardly venture an opinion, for many birds, even of the same species, use different materials in the construction of the nest. As an instance, I have in my cabinet a nest of the Hedge Sparrow composed entirely of wool, excepting for just a small quantity of moss outside; another is made of twigs, moss, and a complete lining of cow hair. During a season one will occasionally find a Thrush's nest with an inner lining of horse manure in place of the usual one of rotton wood, and sometimes one quite devoid of any mud lining whatever.—H. N.

Advertisements continued from page 408.

MAINLY BRITISH—continued.

TWO cock Chaffinches, full song, exchange for Rabbits, and also Blackbird, exchange for Rabbits.—Cundy, Priory-av., Prittlewell.

HOW BIRDS PROPOSE.

Six artistic postcards, showing the positions of some familiar British birds in courting poses. Specially drawn by well-known artists for the publisher, Mr. F. Finn, price 6d. per set.—F. Carl, 154, Fleet Street, London, E.C.

A GOOD AGENCY.—Respectable men in regular employment, desirous of increasing their income, are invited to apply for terms and particulars of a Spare Time Agency, by which they can supply Clothing, Drapery, Boots, and Shoes, Watches, Jewellery, Household Requisites, Musical Instruments, Bicycles, etc., for cash or credit; favourable terms to agent and customer.—John Myers and Co., Ltd., Box 72, 161, Westminster Bridge Road, London. Established nearly a century.

DRUNKARDS CURED. *Speedily, permanently, secretly, unknown to sufferers, as grateful thousands testify. Cost trifling. Save loved ones; you can with certainty. Sample* 1d.—CARLTON CHEMICAL CO. 589 Holdhall Buildings, Birmingham.

Shave Yourself

and enjoy its manifold advantages. It is cheaper and obviates the wearisome waiting at the hairdressers and the possibilities of barber's rash. **A High-grade RAZOR,** made by the world renowned firm of J. Rogers & Son, Sheffield, sent post paid on receipt of postal order for 2/-. Last a lifetime.

F. L. CLEVAN, 46, Cornwallis Road, Upper Holloway, LONDON.

Printed for the Proprietor, Mr. F. CARL, 154, Fleet Street, E.C., by J. G. HAMMOND & Co. LTD., Fleet Lane, London, E.C.

£28 CASH IN PRIZES FOR CANARY BREEDERS. 1D.

Cage Birds

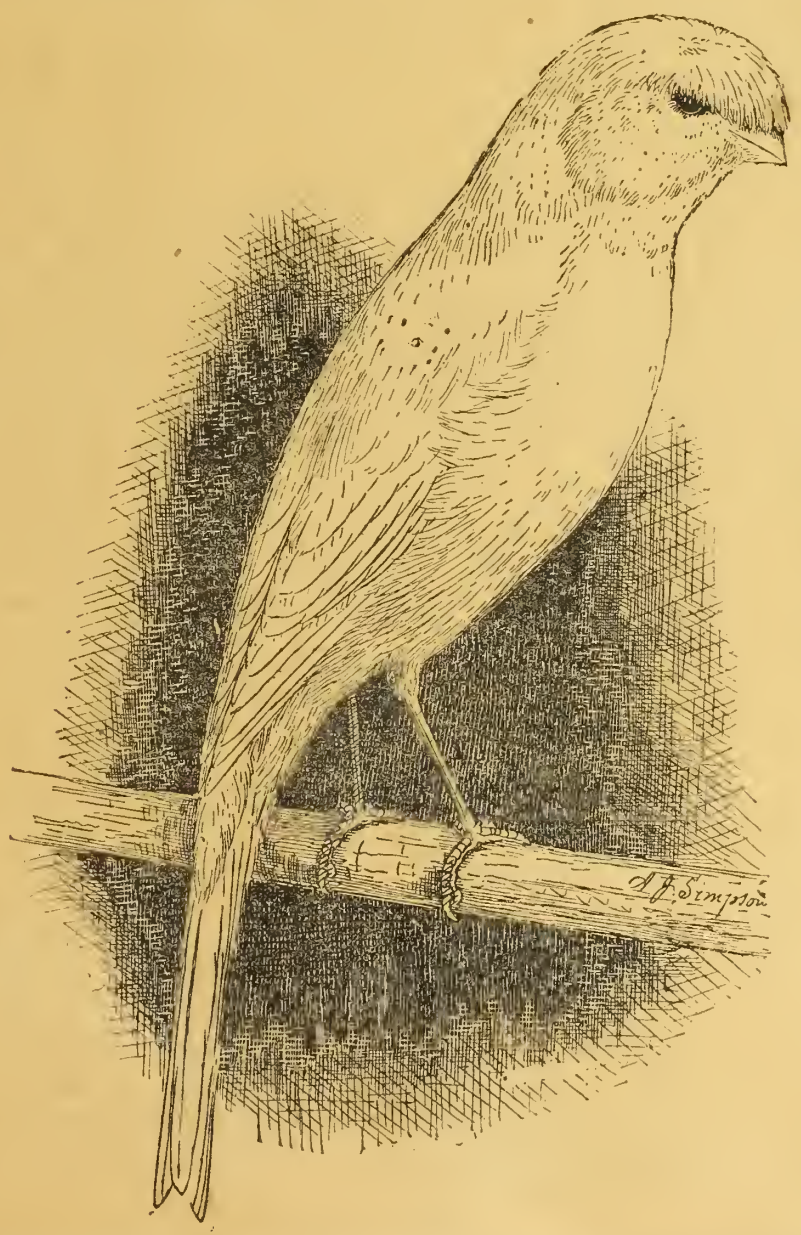
AND BIRD WORLD.

THE LEADING JOURNAL Devoted to CANARIES, HYBRIDS, BRITISH AND FOREIGN CAGE AND WILD BIRDS.

Vol. XI. No. 278. For week ending May 11th, 1907. Price 1d. Subscription 6/6 per ann. post free.

Registered at the G.P.O. as a Newspaper.

THE LANCASHIRE COPPY.



Recent Lectures and Discussions have brought the Giant of the Canary Tribe to the fore. Here is a fine specimen exhibited with great success by Mr. F. J. Green (Redhill). It won First and Special at the last Crystal Palace Show.

F. CARL, Publisher, 154, FLEET STREET, LONDON, E.C.

Telegrams:—"Aviculture, London." Telephone:—5229 Holborn.

ALWAYS USE OUR

DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor for the *bona-fides* of either buyers or sellers. In all transactions the adoption of our Deposit System should be insisted upon.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient, plus the extra postage incurred, has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller, stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from *both* parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has *not* been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or, if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

PREPAID ADVERTISEMENTS

UNDISPLAYED.—Three Words a Penny up to eighteen words, MINIMUM Fourpence. One Halfpenny per Word for each word over eighteen.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and, after the first eighteen words, are charged at two words a penny.

Headlines or Footlines 6d., 9d., 1/-, 1/6, according to size.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL. Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London. Terms for Display Advertisements on application.

J. SANDIFORD, Colour Food King, **PRESTON.**

PERFECTO.

A perfect food for Choughs, Jays, Jackdaws, Thrushes, Blackbirds, Larks, etc. Perfecto is composed of nearly three parts insect food, this food will keep and maintain these birds in fine condition and gloss of feather. Sold in 3d. and 6d. packets. 1 lb. and upwards sent post free, from P. F. M. Galloway, Caversham, Reading.

And yet more about "LIFEBELT."

Mr. T. R. Wing, Hope Villa, Norfolk-st., Boston, writes me on May 6th this year:—"Thanks for sending 'Lifebelt' by return. It arrived just in the nick of time. I am feeding two nests of young birds on it, and I find it suits them well." Further, he says "Life-belt" is a **valuable Foster Mother and should be in every bird room.** "After giving it a thorough trial, I shall bring it before our Society."

You, reader, can have the same advantage. "Lifebelt" and Feeder, 2/6. With each tin I send special instructions to induce hen to resume feeding. Pamphlet for postcard.

Now, what's all this fuss about "Lifebelt"?
Just buy it, and there'll be less strife felt;
The poor semi-orphaus stay with fathers and mothers,
And all grow up sturdy young sisters and brothers,
And warble the praises of "Lifebelt."
(To be continued in our next.)

BOOKS.

THE HYGIENE OF BIRD KEEPING.

By W. GEO. CRESWELL, M.D., L.R.C.P., F.Z.S.

Price 1/1, post free from CAGE BIRDS Offices,
154, FLEET STREET, LONDON, E.C

OPINIONS OF THE PRESS.

LANCET: "This little book will be welcomed by all lovers of birds, whether ornithologists, aviculturists, or the owners of a single pet songster. The author deals with his subject in a thoroughly practical and scientific manner, and the results of his experiments prove the fallacy of some rule-of-thumb theories. . . . The book is well illustrated."

COUNTRY LIFE: " . . . a surprising amount of really valuable advice for all who keep small birds, whether in cages or aviaries. . . . Those who approach the subject with an open mind must admit the cogency of the author's arguments; and these, backed by a very wide experience at first hand, will prove hard nuts to crack for many of the champions of the 'good old methods.' . . . We venture to think that his experience will pave the way for a revolution in the methods of bird keeping in the near future."

STOP!—Look at this, it will interest you. You want good sound healthy reliable birds. I can send you them at reasonable prices. My stock of selected red-breasted singing Linnets is undoubtedly the largest in England (no Foreign sickly rubbish here). Over 1,000 sound healthy birds to select from. Cock Linnets, 1/- each, 3 for 2/6, 6 for 4/6, 12 for 8/-, 24 for 15/-; extra large birds, for show or muling, 1/6, 2/-, 2/6 each. Note the dates, and what my customers say:—"The Stables, April 27th, 1907. Buckingham, Bucks.—The Linnet you sent me is a grand specimen, and excellent songster. I am highly satisfied.—G. Basford to Miss Storey."—"4, School-st., Coatbridge. April 26th, 1907.—Bird arrived safe. I am highly pleased with it. I could not wish for a better.—A. Kirkland to Miss Storey."—"Denaby Dale, Huddersfield. April 27th, 1907.—Received Linnet this morning. Am perfectly satisfied with it. I can recommend your birds to all my friends.—H. Ellis to Miss Storey."—"Reigham Cottage, Alnwick. April 26th, 1907.—Linnets arrived in pink of health, and give every satisfaction. Thanking you for your honest dealing.—R. Arkle to Miss Storey."—"21, Billet-rd., Walthamstow. April 27th, 1907.—I am more than satisfied with the bird you sent me. I consider it worth a lot more money than I paid for it. Your honest way of dealing is a credit to the fancier. It is my duty to recommend you to all my friends.—R. Davison to Miss Storey."—Do not be gulled with rubbishy birds. Let me send you the birds you require on seven days' approval, at my risk; illustrated price list post free.—Miss E. L. Storey, Practical Bird Specialist, Crowle, Doncaster.

MATTHEWS, LINNET KING.

To Linnet singers and Mule breeders.—My Linnets have stood for the last five years, and I have sent them all over England for contest singing and Mule breeding, and they are acknowledged the keenest songsters you can get now. Birds I have sent out are winning for their owners in showing and contest singing. If you want a real good bird, try one of mine. They are all good, large, healthy birds, and are sent on approval at my own risk. I have the largest stock of singing Linnets in England. Some real good Linnets, in full song, been taught under my well-known champions, been caged since November, very steady, real bargains, 2/6, and special birds, 3/-. I have also the finest lot ever seen, all guaranteed ready for Mule breeding, good large healthy Linnets, good nut-brown backs, blood-red breasts, blue beaks, in full wild song, real bargains, 2/6 each. Those intending Mule breeding should send at once for one of these special birds, also a sample of my special mixed seed and instructions how to feed, sent free with every order. I have a few special jonque Linnets for light muling, 3/- each. My special Linnet mixture, sold at four packets a 1/-, and my special wild seed mixture, four packets 1/-; no Linnet fancier should be without it, as it is the best you can possibly get to keep your birds in condition and song. I send all birds out on four days' approval at my own risk. Over 200 in stock. No delay; birds sent day after order. Buy from the catcher. Cash or deposit.—Matthews, Birdcatcher, 44, George-st., Hyde, Cheshire. See last week's CAGE BIRDS.

F. W. HEATON, Ash Cottage, NANTWICH, CHESHIRE. Champion Norwich.

Winner of over 3,000 firsts, specials, and other prizes at the principal shows in the country. Diplomas for best Norwich in show, Crystal Palace, and other leading shows. Have supplied many of our leading exhibitors for years with both stock and show birds. Grand Stock and Show Birds. Single Birds from 15/- each; pairs from 25/-. **Approval with pleasure.** Inspection invited.
State wants—you can rely on true **PURE-BRED NORWICH. TYPE—QUALITY—COLOUR—CONDITION.**

A POPULAR Britisher.—Beautiful coloured plate of a nesting pair of Bullfinches, by Mr. H. Norman, sent to any address, post free, 2d.—Manager, CAGE BIRDS, 154, Fleet-st., London, E.C.

HOUSE moulted fierce singing Linnet, 5/6; another, coming fierce, 3/6; red-breasted Linnet, singing well, 2/-; and a few nice birds, 1/6 each; approval.—Enoch Tams, Church-st., Longton, Staffs.

EXHIBITORS.—Grand cock Goldfinch, deep square blaze, splendid bars and moonings, 7/-; large cock Bullfinch, marvellous cap and colour, 5/6; giant cock Chaffinch, intense blue nape, deep body colour, 5/6; extra large steady hen Bullfinch, 2/6; all the above picked from hundreds, to moult certain winners. Perfection wild seed mixture, 6d. quart, 1/6 gallon.—Ross, Bird Specialist, Forres, N.B.

HARRY ALLEN.

Champion of all champions, 1st and 2nd again. I have the finest lot of Linnets ever seen or heard. Gentlemen, read my successes and you will see that I am speaking the truth. Come and hear them yourself. Everybody is welcome. Big, fine, healthy cock Linnets, stand well, very tame, sure mulers, 2/6 and 3/-; extra picked, well-pencilled birds, 3/6; cock Linnets, singing beautifully, in a polished singing contest cage, with a packet of my special mixture and instructions how to feed, 4/6 the lot, real bargains; young house moulted Linnets, singing hard and grand, finger-tame and fit for show, 7/6, 8/6, 10/6, including cage. I defy any dealer to supply birds like them at the money. Contest cages, 1/- and 1/6 each. Clubs supplied. Four packets of my special mixture, 1/-. Send stamped envelope for particulars of my book on Linnets. "42, Weaver-st., Chester. Sir,—I am very well pleased with the two birds I bought off you last week. I am perfectly satisfied, and hope, my friend, that we shall have many a transaction together.—H. Moore to H. Allen." "11, Dove-st., Fallion, Sunderland. Sir,—The Linnet arrived safe. I am very pleased with it; in fact, I have never heard a caged Linnet sing like it before. I will certainly recommend you to my friends.—F. Narsh to H. Allen." I also thank Mr. Thomas Pickering, Albert-st., Preston, for his £5 offer for one of my contest birds. Come and hear the finest Linnet in the world. A chance of a lifetime. I have no agents, so beware of imitations. All my birds are on seven days' approval; all guaranteed; cash or deposit. Give me a trial order, and you will never regret it.—H. Allen, 42, Brown-hill-cres., Harehills-laue, Leeds.

NOTICE, CALL OR WRITE

and inspect my Norwich. I have a splendid collection in all colours, except greens, and every bird is in the primest condition and feathered like silk; cocks, in full song, 7/6, 8/6, 10/6; hens, 4/-, 4/6, 5/-, 5/6; all on seven days' approval; P.O. or deposit; note, inspection invited any time.—William Shaw, 97, Essex-rd., Islington, London, N.

NORWICH, YORKSHIRES, CRESTS.

NOTICE.—Mr. S. Smith, White-st., Newcastle-on-Tyne, wins silver cup, five firsts. Mr. Williams, Chessell-st., Hull, wins gold medal, three firsts, and second. Mr. Creese, Flake-st., Birkenhead, wins first and second. I claim to have finest stock in West England, and best strain in world. Sent on approval, cash or deposit, and if not giving fullest satisfaction you return them and have your money back in full, as I do not wish you to keep them. Yorkshire cocks, standard length, feather like wax, 5/6, 6/6, 7/6, 10/6, 12/6, 15/-, 20/-; hens, 3/-, 3/6, 4/6, 5/6, 7/6, 10/6, 12/6. Norwich cocks, Bullfinch type, 5/6, 6/6, 7/6, 10/6, 12/6, 15/-, 20/-; hens, 3/-, 3/6, 4/6, 5/6, 7/6, 10/6, 12/6. Crests, large birds, feather to beak ends, 12/6, 15/6, 20/-, 30/-; hens, 7/6, 10/-, 15/-. Best bred hens, 4/6, 5/6, 7/6, 10/6. Pairs selected for amateurs to breed winners, 10/6, 12/6, 15/- upwards.—C. Baker, Herbert-st., Bedminster.

FOR ONE MOMENT

Just consider what it means to you when selecting birds for your breeding stock. It matters not if you be an experienced breeder and exhibitor, or only an amateur, all have, or should have, one desire—to get the best possible birds at the most reasonable prices. If you have this desire I would remind you that Miss Storey has the best collection of birds in England, birds of the proper type in breeding condition, at reasonable prices. Do not be misled with unshapely rubbish, when you can have the very birds you require at the same price, carriage paid to your address, on seven days' approval and no risk whatever, until you are perfectly satisfied with your purchase. I yearly sell many thousands of birds, and give every customer satisfaction. I guarantee to please you if entrusted with your order. I am now offering exceptional good value in typical Norwich cocks, 6/6, 7/6, 8/6, 10/6, 12/6, 15/-, 20/-, and 25/- each. Hens, 4/-, 4/6, 5/6, 6/6, 7/6, 8/6, 10/6, 12/6 each. Matched pairs, 8/6, 9/6, 10/6, 12/6, 15/-, 17/6, 20/- upwards. I receive many thousands of unsolicited testimonials, which are all open for your inspection. To make sure of satisfaction, send me your orders for whatever Canaries or British birds you require. Full new illustrated list post free. All Canaries sent carriage paid, on seven days' approval, at my risk. Travelling cages, 2d. each. Note the old and only address: Miss E. L. Storey, Bird Specialist, Crowle, Doncaster.

PLAINHEADED NORWICH.

Awarded 9,000 Prizes.

The Distinguished Patronage of H.I.M. The Empress of Germany and The Sultan of Turkey.

Rollers & Singing Canaries.

CORKINDALE, Studley, R.S.O., has a few good British Rollers, cocks, 10/-, 15/-.

TWO Roller cocks, in full song, 6/- each; genuine bargain.—Sheahan, 51, Warner-st., New Kent-rd., London.

SEIFERT Rollers, good.—Four cocks, eight hens, some rung, five breeding cages, flight 4 ft. 6 in. by 3 ft. by 6 ft, five small cages, fountains, spray, baths, everything complete, £3; or good exchange; no live stock: no time to attend.—Morris, Jeweller, Acocks Green, Birmingham.

IMPORTANT NOTICE.

Notice, another consignment of St. Andreasberg Rollers has arrived; they are constant day and gaslight songsters, with all the sweetest, softest, and most musical changes of song; water-bubbles, runs, silvery trills, piccolo, harp, and deep bass rolls, etc.; all on six days' approval on receipt of P.O., or deposit the amount with the Editor; 8s. 6d., 10s. 6d.; perfection. Schoolmasters, 12s. 6d., 15s. 6d., 18s. 6d., 21s.; inspection invited any time.—William Shaw, 97, Essex Road, Islington, London, N.

HARTZ MOUNTAIN

Roller cock Canaries, direct from Hartz, beautiful birds, only 3s. 9d. each; 21s. a stick, try one.—Varney, Stratford.—"The Elms, 18, Whitehouse Loan, Edinburgh, January 1st, 1907.—Hummell arrived safely, and sings lovely; it is a pretty bird, and gives satisfaction.—N. Turnbull."—"January 2nd, 1907.—Birds arrived, are singing well.—R. M. Lee, 79, Mill Street, Crewe."—"Broom, Newton Mears, Glasgow.—The birds arrived in good condition; I am well pleased with such value.—J. Broom."—"January 2nd, 1907, 32, Easson Road, Darlington.—Bird to hand. I like the song wonderfully well, and thank you for your prompt delivery and attention to my instructions.—H. Hutchison."—Send all orders to Varney, Strattord, London.

Hummel Rollers.

Finest Rollers imported. To speak well of the Hummel is to gild refined gold. Testimonials from customers who say the Hummel is still singing as sweetly as when purchased four, five, six, and seven years ago. All Hummels have delightful, deep, delicate bow roll, hollow roll, hollow bow roll, du pipe, hollow bell roll, grand round bass roll, vibrating hollow roll, and charming water bubble roll: one price only, 12s. 6d.; no fancy prices; Hummel hens, 3s. each; a beautiful pair of Hummels for 15s. St. Andreasberg Rollers, 5s. and 7s. 6d. each. Hummel Schoolmasters, 20s. each, better than can be obtained elsewhere at treble the price. Thousands of testimonials have been published by me in CAGE BIRDS from satisfied customers. I guarantee strictly honourable trading and satisfaction to all.—Varney, sole proprietor and importer of this remarkable Roller Canary. Twenty years advertiser.—Varney, Stratford, London. Export a speciality. "The Schools, Overton, Ellesmere.—Hummel arrived, it at once commenced to sing—yes, a song worth listening to. It is the most exquisite songster I ever heard—decidedly a perfect Roller. I may say I never expected such perfection; they are worth all you charge for them. I must thank you for your courtesy, and shall be able to recommend your firm to those who require birds and not rubbish."—F. Robbins, to Varney, Stratford, London, Sole Proprietor and Wholesale Roller Canary Importer and Dealer.

BE IN TIME.

If you require a high-class Roller, I must urge you to order early, as I have only 500 of these marvellous songsters for disposal; when these few are sold I cannot supply any more until next season. These are not a lot of wasters picked up in German markets, but the whole stock of one of the most noted Roller breeders. Every bird is cheap at 20/- each; but as I have bought them right I offer these high-class birds at about half their value. Genuine highly trained cocks, in full song, by day and gaslight, 8/6, 10/6, and 12/6 each. Picked contest and Bandmaster songsters, 15/-, 17/6, and 20/- each. Pure Roller hens, of same breed, 3/6, 4/6, 5/6 each. For loud songsters that will make the place ring with their song, I have a lot of selected Yorkshire and Norwich songsters, 7/6, 8/6, 10/6. Matched breeding pairs of Rollers, Yorkshires, Norwich, and Crested Canaries at 10/6, 12/6, and 15/- per pair. Note the dates of these; I have thousands open for inspection. "Boundary-rd., Chatham, May 4th, 1907.—Roller arrived in splendid condition. I am more than pleased with same.—A. Burtenshaw to Miss Storey." "16, Brynteg-ter., Myrthyr Vale, May 4th, 1907.—The Roller you sent me has proved himself a marvellous songster. I am fully satisfied.—I. Williams to Miss Storey." "3, Cainhoe-cottages, Buckhirst, May 3rd, 1907.—The Canary you sent me gives the best of satisfaction. It is the best I have ever had for the money. I shall certainly send you all my future orders.—C. Glasscock to Miss Storey." "17, Royswalk-rd., Llanelly, May 4th, 1907.—Received bird safe. I am very pleased with it, and thank you for your straightforward dealing and for sending me such a good bird. Another order enclosed.—O. Harries to Miss Storey." "22, Colliers'-row, Abermont, Aberdare, May 4th, 1907.—Received bird safe. I am indeed highly satisfied. It is the best bird I have ever seen.—D. Phillips to Miss Storey." "468, Stamebroom, Alfreton, May 3rd, 1907.—I am more than satisfied with the bird you sent me; he is the best I have ever seen, and by far the best songster I have ever had the pleasure to hear. Your straightforward and honest dealing gives you great credit.—W. Fletcher to Miss Storey." I could fill this page with letters of praise. All I ask is let me send you one of my birds, carriage paid, on seven days' approval, at my risk, and you will be convinced that the quality of the bird is the best, and the prices are the most reasonable. Send postcard for my new illustrated list. Neat travelling cages, 2d. each; all birds carriage paid, on seven days' approval.—Miss E. L. Storey, Importer and Breeder, Crowle, Doncaster.

Scotch Fancies.

SCOTCH FANCY telescope show cages, six pair, double carrying box, cage racks; bargains.—Watson, 35, Martyr-st., Glasgow.

SOME Northern Beauties.—Exquisite coloured plate of Belgian and Scotch Fancy Canaries, post paid on receipt of four penny stamps.—F. Carl, CAGE BIRDS Office, 154, Fleet-st., London, E.C.

I have a splendid lot of

Scotch Fancies still left

COCKS and HENS,

all in my possession through the winter and **guaranteed untried,** also first and second Crosses, **15/-, 20/-, 30/-, 40/-** each.

W. RUDD, THE Bird Specialist, **NORWICH.**

Yorkshires.

CHAMPION YORKSHIRES.

SPECIAL Notice.—Write or call at any time and see my splendid lot of long, slim, straight, upstanding Yorkshires; every bird in the primest condition, with plumage like silk; every cock warranted singing; all cold room bred and kept. I have them in all colours except Greens, and all on seven days' approval; cash or deposit; Yellow cocks, orange-yellow, 8s. 6d., 9s. 6d., 10s. 6d.; Buffs, cocks, 7s. 6d., 8s. 6d., 10s. 6d.; Orange-Yellow hens, 4s. 6d., 5s., 5s. 6d.; Buff hens, 3s. 6d., 4s., 4s. 6d.; inspection invited.—Shaw, 97, Essex Road, Islington, London,

POSTAL ORDERS, PLEASE.

Owing to the new Post Office Regulations respecting the use of stamps upon Postal Orders, we are reluctantly compelled to state that in future our rule re **sending Postal Orders as far as possible instead of stamps** *must be strictly enforced. Advertisers unable to obtain Postal Orders must remit an extra halfpenny with every four penny stamps.*

WHAT WINS.

What wins your confidence, the confidence of your friends, and the good faith of every bird lover at home and abroad, is the genuine straightforwardness and honest dealing of the Lady Bird Specialist. Why not favour her with your order? If it be for one bird or one thousand, you will be sure to be perfectly satisfied with your purchase. She sends all her Canaries carriage paid, on seven days' approval, taking all risk during the time of approval, guaranteeing you sound, healthy birds of good quality at reasonable prices. Her stock of high-class Yorkshires is undoubtedly the best and one of the largest in England (no half-bred and crossed foreign rubbish here); over 10,000 birds to select from. Tight-feathered up-standing Yorkshire cocks, in full song, 6/6, 7/6, 8/6, 10/6, 12/6, 15/- each. Racy Yorkshire hens, 3/6, 4/6, 5/6, 6/6, 7/6, 8/6, 10/6 each. Properly matched pairs, 8/6, 10/6, 12/6, 15/-, 17/6, 20/- per pair. A few winners at reasonable prices. A trial order will convince you and your friends that for good quality, at low prices, it is impossible to equal Miss Storey. Every customer sends an unsolicited testimonial. Many thousands open for inspection. See my previous advertisement. If you want good reliable birds at reasonable prices, send your order to Miss Storey, who has a large stock of Norwich at the same prices as Yorkshires. All Canaries are sent to your address, carriage paid, on seven clear days' approval. Travelling cages, 2d. each. New up-to-date illustrated price list post free. Note the old and only address: Miss E. L. Storey, Bird Specialist, Crowle, Doncaster.

"EGGERTINE."

It is the best, purest, and greatest bone and muscle forming food ever known, as the analytical reports of most eminent authorities prove. It will bring hens into sound and robust condition for breeding as nothing else will. This during the past twenty years has been proved by thousands. It is a genuine egg food made with fresh laid English eggs, with white, of course, included (and NOT foreign preserved yolk of egg) with other valuable properties combined. Tins, post free, **1s. 3d.**; large size, **2s. 6d.** There is a saving in the larger size.

W. RUDD,

THE Bird Specialist,

NORWICH.

BOOKLET FREE.

FINEST Talking Parrots. I only deal in Parrots that will make first-class talkers; no rubbish. I am willing at all times to send my Parrots on four weeks' trial and three months' talking guarantee. Why? Because all my Parrots are young, strong, and reliable. My lifetime has been spent among grey Parrots, both at home and abroad. I guarantee every customer every satisfaction. Grey Parrots are my special fancy. I have trained them, know their wants, and can give every purchaser a bird that will please him in every way. I can supply grey talkers, not thinkers, that will say almost anything, at reasonable prices. Before you purchase a grey or green Parrot, send for my Booklet, entitled "Talking Parrots." All my birds are sent on four weeks' trial, at my risk. Send postcard for catalogue.—Mrs. Forster, Princes Park Aviaries, Violet Street, Liverpool.

PARROT LOVERS

Should send post-card immediately for our new enlarged book entitled "Parrot Prattle" (registered copyright, infringers and imitators will be proceeded against). This book contains 120 pages of very interesting facts, and gives valuable advice and hints to all parrot buyers. Full details of our original system of selling Parrots on four week's trial, at our risk, which we were the first to introduce. We sell Parrots of all descriptions on four weeks' trial, at our risk, before settlement. Cheapest and best in the Kingdom, and any Parrot sold by us, and not giving full satisfaction, will be exchanged any time within twelve months. Remember we lead and others try to follow. Write to other dealers as well as us, and judge for yourselves. Lists of Parrots for sale and above book post free on receipt of postcard.

PARROT AVIARIES, MORECAMBE.

AFRICAN GREY PARROTS.

If you are in want of a good genuine African Grey Parrot you cannot do better than write to me. I have splendid young African Greys at **20/-** each, also big African Greys, real beauties, at **25/-**. These birds are whistling and chattering nicely and will soon talk. Talking Amazons **70/-** Finger tame Amazons **30/-** Young Amazons **20/-** Approval with all birds. Note Address—

ADAMS, PARK PLACE, LIVERPOOL

JOHN D. HAMLYN

221, ST. GEORGE'S ST., LONDON DOCKS.

The following stock has arrived since the 30th April to 5th May.

1 Male Chimpanzee; 1 Female Chimpanzee; 1 Brazzas Monkey; 1 Black Mangabey; 1 Moustache; 1 Hussar; 3 Callatrix; 2 Rhesus; 6 Maeaques; 6 Bonnets; 3 Mandrills; 2 Dogfaces; 1 Hamadrias; 1 Dusky Gelada Baboon; 2 Toques; 6 Lemurs; 3 Mouse Deer; 6 Armadillos; 8 Boa Snakes; 4 Pythons; 3 Fox Cubs; 36 South Coast Greys; 3 Double-Front Amazons; 3 Senegal Parrakeets; 5 Ring-neck Parrakeets; 13 Half-Moon Parrakeets; 3 Yellow Cheeks; 1 Talking Grey; 1 Talking Hen Bullfinch; 6 Shamahs; 15 Rosa Pastors; 11 Crested Minahs; 100 Spice; 100 Avadavats; 500 Blackheads; 100 Javas; 100 Whitebellies; 1 pair Bleeding Heart Pigeons; 20 Cockatiels; 11 Black Goulds; 1 Redhead; 5 Ruficauda; 2 Bichenas; 4 Longtail Grass; 4 Masked Grass; 1 Sydney Waxbill; 1 White Java; 16 Snow Finches; 1 Hoopoe; 1 Redrump; 2 Budgerigars; 2 Cutthroats; 1 Oriole; 11 Virginian Cardinals; 40 Goldfinches.

Respecting the vexed question of being the **"largest importer,"** I respectfully advise the general public to visit the respective advertisers, and judge for themselves.

SALES FOR APRIL MONTH.

During the twenty-six working days £570 18s. 9d. worth of stock sold.

Large Double-front Amazon, Show condition, **60/6**; Shamah, or Indian Nightingale, **40/6**; Indian Rosa Pastor, **15/6**; Crested Minah, **12/6**; Toucan, **30/6**; Half-Moon Parrakeet, **10/6**; Senegal Marabou Parrakeet, **20/6**; South Coast Grey Parrot, **30/6**; Macaw, **60/6**; Rose Cockatoo, **6/6**; White Cockatoo, **25/6**; Snow Finch, **10/6**; Blackhead Gouldian, **17/6**; Masked Grass Finch, **17/6**; Ruficauda Finches, **15/-**; Double Banded, **20/6**; Yellow Budgerigars, **10/6**; Zebras, **6/-**; Cock Virginian Cardinal, **32/6**; Giant Longtail Whydahs, **30/6**; Madagascar Red Weaver, **5/6**; Blue Mountain or Swainson's Lorikeet, **40/6** pair; Saffrons, **3/6** pair; Cockatiel, **10/6**; Californian Quail, **20/6**; Weavers, in colour, **4/6**.

12 Blackheaded Nuns	..	7/6 or 2/- pair.
12 White-bellied Nuns	..	10/6 or 2/4 ,,
12 Spice Birds ..	..	10/6 or 2/- ,,
12 Avadavats ..	..	9/6 or 2/4 ,,
12 Javas ..	..	9/6 or 2/4 ,,
12 Orange Cheeks ..	..	10/- or 2/4 ,,
12 Senegals ..	..	10/- or 2/4 ,,

Only sold in above quantities.

SELECTION No. 1.—2 Cordons; 2 White bellies; 2 Combassous; 2 Orange Waxbills; 2 Senegal Waxbills; 2 Avadavats, **12/6**.

SELECTION No. 2.—2 Javas; 2 Blackheads; 2 Weavers; 2 Spice; 2 Avadavats; 2 Senegal Waxbills, for **9/6**.

I only advertise what is actually kept in stock.

NOTICE!!! That all the above-mentioned birds are packed in perfectly new and clean travelling boxes, with sufficient food, etc., for the journey. Great care is taken that only healthy birds are sent out, and it is our joint wish to give satisfaction.

1,000 birds can always be seen any time between 8 and 6 o'clock, also Waterfowl and Animals.

Ten minutes from Mark Lane Station.
Telephone: 6341 Avenue.

Wanted to Purchase. Bullfinches, Goldfinches, Skylarks, etc., for exportation; rubbish not entertained; good prices for genuine stock.

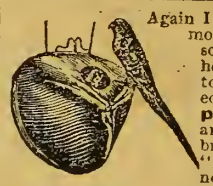
JOHN D. HAMLYN,

221, ST. GEORGE'S ST., LONDON DOCKS.

HUSK NESTS.

Again, I say, too busy for fairy tales. Try a sample set for **1/-**, it will save you a lost season. **3/-, 4/-, 5/-** doz. **Cokernut Shell Nests,** for small Finches, etc., **4/-** and **6/-** doz. Sample pair, **1/-** (carriage paid). **Cockatiel Box Nest,** the very latest idea, approved by all the leading aviculturists, **1/-**; varnished **1/6**. Special terms to trade. Write for prices.

PEARSON, COKERNUT MERCHANT, GREENWICH.



Again I wager £25 that I have wired more husks than any other person living. Has any other maker, however large, sufficient pluck to accept and deposit with editor? My selected **"Improved Secure" Husks** are really and absolutely unbreakable; they have stood the "wonderful" test of 16 years—not six months. Competition always increases their popularity, and still they remain unequalled. Don't be gulled by any paper puff, but listen what experts say:—CAGE BIRDS says they are "far superior to the old husks." "Feathered World" says: "Undoubtedly, the new husks are very superior to the old." Again "Exchange and Mart" says: "Those prepared by Mr. Harper are very superior to the old style, which often fall to pieces at the most critical time, with disastrous results for the nestlings. You had better order the improved form; even if it is a little dearer than the old-fashioned sort, it is cheaper in the long run." "Fur and Feather" tells its correspondents: "They have distinct advantages over the old sort." "Poultry" has said: "For Budgerigars we advise the use of the improved style of husks." Surely these are convincing testimonials. They are **4/6** dozen; smaller quantities, **5d.** each. Interesting pamphlet, entitled "Budgerigar Breeding," free on application. Superior box nests for Cockatiels, etc., **1/6**. Send for the pamphlet now.

HARPER, Upper Villiers Street, WOLVERHAMPTON.

PAYNE & WALLACE,

NATURALISTS,

The Little Zoo, BATH.

The following birds are still in stock:—

Stanley Parrakeets (P. leteruis), **£4 4s.** pair; **Many Colors, £3** pair; **Yellow Collars** ("Twenty-eights," Barnardius Semitorquatus), **£3** pair; **Port Lincoln Parrakeets** (B. Zonarius), **£3** pair; **Varied Lorrikeets, £3** pair. **Bronzewing Pigeons** (P. Chalcoptera), **£3** pair; **Brush Bronzewing Pigeons** (P. Elegans), **£3** pair. **Plumed Doves** (Lophophaps leucogaster), **£3** pair. **Bronze Neck Doves, £3** pair; **Diamond Doves, 15/-** pair. **Black-Headed Gouldians, 17/6** pair; **Masked Finches, 17/6** pair; **Bicheno Finches** ("Double bar" or "Banded"), **15/-** pair; **Ruficaudas, 15/-** pair; **Long Tail Grass Finches, 10s.** pair; **Pectoralis Finches, 10/-** pair; **Yellow Rump Finches, 10/-** pair; a few **Zebra Finches, 5/-** pair; **Budgerigars, 7/6** pair, single cocks, **4/-** each. Also in stock:—Stump-tailed Skunks; flat, broad-tailed Lizards; Isabeline, Antilopine and great grey Kangaroos; agile, shortailed, rabbit-eared and black-gloved Wallabies; Rat Kangaroos. Prices on application.

Send for Price List of Collection of Finches.

ALL BIRDS CAN BE HAD ON APPROVAL.

Bear in mind that in dealing with US you are dealing direct with the trappers, not with mere importers. We are the only firm **in Europe** that visit Australia **annually** for the purpose of collecting birds and animals. If you want anything (whether living or dead) collected specially, write to us for quotation. Our Mr. Wallace sails for Australia in about a fortnight.

Have you tried your birds with our special FLINT GRIT at 5/9 per cwt, 3/- ½-cwt.? If not write for sample, 1d. stamp.

PAYNE & WALLACE, Bath.

WANTED.

WANTED, singing Canaries, for cash, or exchange cages.—Morrison, 95, Burnside-st., Glasgow.

WANTED, singing birds in exchange for new cages or seed.—Rollinson, Waugh-st., Oldham.

WANTED, Albino or Cinnamon Thrushes, Starlings, and Robins.—Bush, Library, Newport, Mon.

WANTED, pair Norwich Canaries; exchange pair Hamburghs, fit for show.—Cook, Pembridge.

WANTED, talking Parrots, for cash; send full particulars.—Pearson, Greenwich. Must be on appro.

WANTED, your stock you don't want; will exchange it for stock you do.—Pearson, Greenwich.

WANTED, Canaries, young or old, for c b—Walker, Bird Dealer, 19, Harrington-st., Marreyhill, Glasgow.

WANTED, Rollers, Crests, or offers for Scotch Fancy cock, two Norwich cocks, Goldfinch Mules, Goldfinches, Linnets.—Dudley, Occupation-st., Dudley.

WANTED, Black or White Pekin Bantams; exchange Himalayan Buck and Grey Dutch Doe, winners.—Freeman, Church-walk, Bridlington.

WANTED, muling cock Goldfinch, will give two box cages and three wire fronts, in good condition.—17, Gainsbro'-grove, Newcastle-on-Tyne.

WANTED, pair Border Fancies, for even mark breeding; also pair of Greens; approval.—Laidlaw, Painter, Langholm.

WANTED, good hand camera and accessories; exchange prize-bred Yorkshire cock; or sell 10/6.—A. Sandars, Kettlebrook, Tamworth.

WANTED, offers in British or Foreign birds, for Norwich croppers, blues, blacks, reds.—T. Miles, Bird Specialist, Norwich.

WANTED, any number of Canaries and Linnets, cheap for cash.—J. Thorn, 37, Plumstead-rd., Woolwich.

WANTED, a tame hand-reared hen Thrush and tame hand-reared cock Starling, in good condition; approval.—Bush, Library, Newport, Mon.

WANTED cock and two hen Canaries; exchange tweed suit length, patterns sent, sell £1.—Drummond, Hutcheson-st., Glasgow.

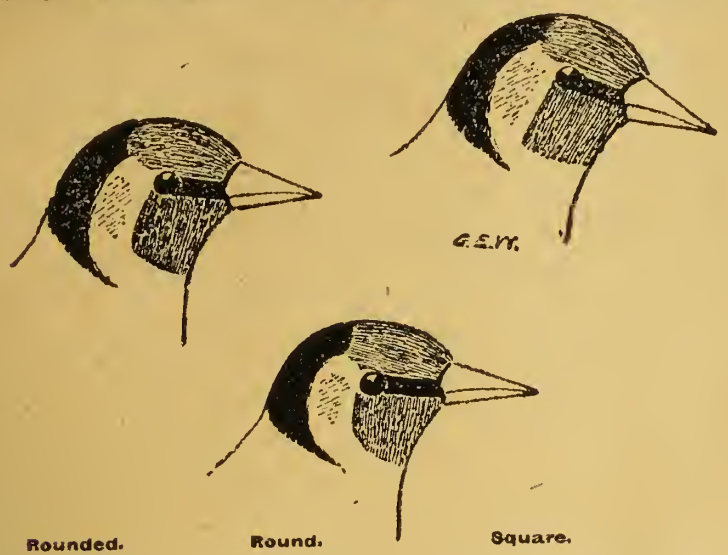
WANTED Canaries, Crests, Yorkshires, Norwich, Linnets, Goldfinches, Bullfinches, Thrushes, Parrots.—Baker, Herbert-st., Bedminster.

WANTED, 1,000 Canaries, in large and small quantities, for cash.—Send particulars, C. Wressell, Crowle, Lincolnshire.

Congratulations to Mr. Standage, who upon the night of his election to Wimbledon C.B.S. succeeded in carrying off premier honours in a judging competition, held last Monday evening. Mr. Smith was the runner-up, and Mr. F. J. Day secured third position. A lady member, Mrs. Griffiths, came fourth.

Those in need of cages or cage furniture should send to Mr. Hayes, of Blackburn, for one of his price lists. Further particulars will be found in our advertisement columns.

The Blaze of the Goldfinch.



THE BLAZE.

Square, Rounded or Round?

A Few Observations on an Important Feature of the Exhibition Goldfinch.

Few lovers of the sprightly Goldfinch will, I think, quarrel with the assertion that the blaze is the all-important point of the exhibition specimen. Without a really good blaze a Finch, no matter how good in other respects, can hardly hope to attain the highest honours the show bench affords. Yet the blaze is by no means the beginning and end of an exhibition Goldie, for it is quite true that a bird may excel in this point and still fail to gain the coveted first prize through lack of excellence in other essentials. This seldom happens, however, for it is a curious and striking truism that a Goldfinch possessing first-class blaze properties, in nineteen cases out of twenty, will be found to be a first-class specimen all round—it is, in short, a sort of hall mark.

When one comes to think of it, "blaze" is rather a singular term to apply to a feature of a bird. It is, of course, a fanciers' word pure and simple, yet so apt that I should imagine few hearing it used, however unversed they might be in the language of the Fancy, would fail to at once grasp to which part of the bird it referred. It indicates something fiery in colour, and we have that, and something more, in the blaze of the Goldfinch—its crimson depths would be hard to match in the fieriest furnace ever lighted.

To get a pure crimson—I am not sure that "crimson" exactly expresses the colour, but 'twill serve—is not an easy matter. Often an underlying layer of black feather shows through, and lends it a patchy appearance; and sometimes the black feathers which run round the base of the beak and extend in a line from the base to the eye are too pronounced, this heaviness also detracting considerably from its appearance. The blaze, too, that is "on the dark side," as fanciers term it, is very apt to be disfigured by a couple of lines of black, which, starting from each side of the lower mandible, run down into the under-blaze—making what might be called moustachial streaks. All these things are faults, of course.

A bird which has the purity of the crimson marred by black feathers peeping through amongst its blaze is also generally handicapped in another direction. When it has just recovered from the moult, and has yet to "come up to colour," the above undesirable point is accentuated by reason of the paleness of the rest of the face. A little later on, if all goes well with the bird, this contrast will be toned down, and at this stage such a Finch (I am asuming him to be first-class all round) will need a deal of beating. But a little later on still, when, through the attention bestowed on him by his owner, and the high-feeding, he comes out in "full bloom," with "tanning" deepened to a rich chestnut, and blaze colour to the richest possible crimson, he will generally be found to have come too dark in blaze—that is to say, that admixture of black feathers (or the underlying black feathers) gives so heavy a tone to the crimson as to cause the lynx-eyed reporters to say of him, "Gone too dark in blaze," "Past his prime," and similar things. This state of affairs obtains with one of the best-known Goldies on the show bench to-day. Another Finch may be in reality equally deep in colour so far as the crimson goes and yet, having it laid on a clean ground, be merely labelled as possessing "beautiful depth."

When selecting a greypate with an eye to moulting it out for show purposes, it is well to remember that a young bird, much mottled with black in the region where the blaze may be expected to put in an appearance, can rarely, if ever, be depended on to come through with the much-to-be-desired purity of crimson. As a bird rejoicing in singular purity of blaze colour one may be pardoned, perhaps, for instancing the winning Goldfinch at the last (1907) Crystal Palace Show, with which might be coupled the 1905-6 winner, now, alas, apparently no more.

Mention of these two birds brings to mind the shape of the blaze. This may be divided, roughly, into square, round and rounded. These terms are usually more particularly applied to the under-blaze, and I have endeavoured to illustrate them by means of a small sketch. The upper figure depicts a head carrying a very square-cut blaze; that on the left hand side a rounded blaze; that underneath a round blaze. The former, I may say, is modelled on the head of last season's Palace winner; the left hand figure on the head of the winner of the two previous seasons.

It seems quite arbitrarily fixed that the acme of perfection is a square-cut blaze. Whoever as judge put a rounded blaze over a square one (other things being equal) would be certain, metaphorically speaking, to get his nose tweaked. Yet I have a friend who has exhibited as good Finches as anyone, and who knows as much about them as anyone, who holds that the square blaze ought not to be an arbitrary feature. He considers the sharply square lines out of harmony with the graceful curves taken by the majority of the other markings of the Goldfinch; that the rounded corners are the most effective, artistically considered; and that, in perfection, they are even the more difficult to obtain. We have spent many pleasant hours "argifying" the matter. Which way my own sympathies lie, I am not going to tell. But I am breaking no confidences when I say that had the winner of the previous season put in an appearance at the last Palace Show, in his old form, the judge's task of allotting the first prize card would have been a heart-breaking one.

The square blaze must be a latter-day fancy, I think, for most of the real "old hands"—both dealers and otherwise—swear by the round-blazed Goldfinch. Often when I am looking over a few Finches in a dealer's shop, that worthy will say: "You've missed a nice one here, guv'nor—a proper apple-faced one. How about him?" There is only one thing you can say: that you want to leave a few decent birds behind for his other customers.—G. E. Weston.

"LIVERPOOL" VIRUS
is absolutely harmless to human beings and animals, but is speedily fatal to
RATS & MICE.
It causes a fatal disease to spread through a colony of these pests.
They do not die in their holes.
There is, therefore, no danger of smell from dead bodies.

"CAGE BIRDS"
BREEDING ROOM REGISTER
AND
BIRD KEEPER'S ACCOUNT BOOK.

(COPYRIGHT.)

COMPILED BY G. E. WESTON.

The Latest Publication for the benefit of keepers of cage birds. Is framed on novel lines and contains many entirely new departures. Is absolutely indispensable to everyone interested in the hobby.

It has been represented to us that while our Stud Register Cards are admirable for the purpose of hanging up in the bird room to make notes on of the season's proceedings, something of a more substantial nature is desirable for the purpose of keeping a permanent record of the progress made.

To meet this need we have had compiled "Cage Birds" **Breeding Room Register and Bird Keeper's Account Book,** which offers in a handy form a means of keeping—

The complete pedigree and description of every bird in one's room.
A full record of the season's breeding experiences.
An account of every young bird reared, and how it was disposed of.
A register of one's doings at the shows (the most complete and useful yet devised).
A cash account for the year.
A profit and loss account of the season's proceedings, and a balance sheet showing how much one has invested in the hobby.

A series of Registers will thus furnish a concise record of the career of a fancier as a breeder and an exhibitor from year to year, or over any number of years.

Many useful Emergency and other Hints will also be found in its pages.

Price 6d. from any newsagent,

or 7d. (postal order) post free from this office.

THE GREATEST VALUE FOR MONEY EVER OFFERED. GET YOUR COPY AT ONCE.

OUR CANARY BREEDING COMPETITION.

Great Inrush of Novices.

Forms Now Ready.

We are highly gratified at the splendid reception our canary breeding competition is meeting with. Everywhere new recruits to our hobby are being enlisted, and quite a brisk demand for stock birds has set in as the result. Societies are eagerly availing themselves of our competition cards, which advertise their secretaries' names and addresses, whilst directing intending competitors to place themselves in touch with the local society. Declaration forms are now ready, and should be applied for at once.

Mrs. M. Ambridge (Fenny Stratford) writes:—I have started breeding Canaries, and I think your Competition is a grand one. I feel I should like to go in for it. I shall take Cage Birds every week, and take great interest in it always. I am sorry to say I cannot get my friends to put their names on the form. I went out and talked it over to my friends yesterday, but could not get them to fill in their names, so what must I do? I should like to be one of the winners, and then they would be sorry. Now, can I go in for it or not?

Of course you can go in for our competition, dear Mrs. Ambridge. What's to prevent you? It isn't necessary for competitors in the Breeding Competition to get six signatures. All they need do is to send for our Declaration Form. The Tell Six or Nomination Competition is totally distinct from the Breeding Competition. You may not be successful in persuading your friends, but if you only try to persuade them, think of the good you are doing. If you don't succeed in making Canary breeders of them this year they may come along next, and then your persistence will have brought its reward. We advise you to leave your old copies of Cage Birds with these obstinate friends of yours for two days.

In connection with our Canary Breeding Competition, a good house to house canvass ought to be carried on by all lovers of the Canary. A copy of "C.B.," marked in blue pencil drawing attention to the scheme, ought to be dropped in the letter box of every house where Canaries are hung up in the window, or send us the addresses of six such houses (never mind the names of the residents), and we will post you, as a token of our thanks, a packet of picture postcards.

A correspondent last week raised the objection that the "tell six" plan was no use to him, as he lived in a country village. This circumstance, so far from being a disadvantage, ought to be a help to him, as neighbours are generally on more friendly terms in a small village than in a large town. Besides, the form can be cut out of the paper and posted in an envelope to a friend with instructions to forward to another, etc.

W. H. Baker, 6, Cambridge Street, Mansfield, Notts, writes:—"I thought I should like to enter your Canary Breeding Competition. This is my second year of breeding, and I am having some very good luck up to now. I have got six hens and five cocks up. This is my first round. I have got 24 young birds out 28 eggs, and now the hens are all sitting again; there are 32 eggs and 28 are fertile. They come off on May 8th, 9th, 10th. They are all my own hens that I bred last year, and three of the cocks are only song birds, Norwich, they are not show birds. I have tried to get six of my friends to enter the competition, but they are doing very badly. I know a young friend who breeds Canaries, and he has got six pairs up, but has not got one young bird. Another has got three pairs up and only two young birds, so I think they are having had luck. I have one hen that laid seven eggs and hatched the lot. She is feeding them, and they are doing very well. They are now a fortnight old and the hen wants to go to nest again."

This is my first year as a Canary breeder, and I am proud of the fact. I have got 18 fine, chubby little babies all flying in the aviary now, and five hens sitting on the second round and one building. I might tell you I have only six pairs, or six hens and five cocks. I think I will stand a good chance to win one of your prizes. I should also be grateful to you if you will tell me of some cage bird society that I could join, as I have got the Canary fever very badly. Leastways, that is what my people call it. People tell me I am very lucky; I admit I am. I should be very pleased to show my birds to any member of any cage bird society round about if they could call, any time after six week nights or one o'clock Saturdays. Please send me a form, I enclose stamp addressed envelope.—James Holland, 26, High Street, Homerton.

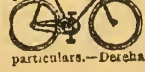
[The nearest societies to you are, we believe, Leyton and District and Walthamstow. Perhaps the secretaries will write you.—Ed. "C.B."]

I started breeding with two pairs of Canaries last year, and intended breeding this year. But my employment calling me away from home for weeks together I could not look after them, so last March I gave them entirely to my son as his own. He is 16 years of age, has got whole control of the birds, and is eager to join your breeding competition. But he is afraid he is not eligible, as he did not pay for birds out of his own pocket. Will thank you to let me know through Cage Birds if he can go in for your Novices' Breeding Competition, as I think it would greatly encourage him in his hobby.—W. Merritt (Cardiff).

[Your son is eligible to compete, but should he be successful we shall require you to prove by affidavit, or evidence of a responsible kind, that the birds became his property last March.—Ed. "C.B."]

R. H. Harrison (North Shields) asks for the coupon to be inset separately. This is not practicable, as it would mean too much additional expense and trouble for us, and might be lost out of the copy before it reached the reader.

Henry J. Scyer (Pimlico), age 12, has only one pair of Yorkshire Canaries. He is a new beginner, and enquires whether he would be eligible.—Yes, Henry, certainly. Read announcement on page 435.



5s. M'thly. £3 10s. GIGANTIC FACTORY SALE. Offered. 5000 new "Clincher Tyred" F.W. Cycles for £3 16s. by instalments; or, cash with order, £3 10s. Worth double. Free on rails Norwich; approval. Send no money. Send Post Card for full particulars.—Dereham Road Cycle Co., Norwich.

The Breeding of Canaries.

By J. POOLEY ("Fresh Air").

The First-Prize Essay in the recent competition promoted by the City and Suburban Association of Canary Breeders.

To write anything fresh on this is very difficult. As I am only a novice, I will say how I manage my small stud of birds during the breeding season. Having had the room cleaned thoroughly with sanitary distemper, the cages all washed and painted inside and out with enamel, I look round to see if I have got enough nest pans, drinkers, egg drawers, and various other little things, not to mention a stock of the best canary seed, German rape, hemp, maw, and other seed, so as not to have to rush about later on to get them here and there. As I do not believe in forcing the birds into breeding condition too soon, it is early in March ere I start to feed them up more liberally, with a little egg food once or twice a week, a little mixed seed (not packet seed) and soaked rape seed just beginning to shoot out. The last week in March I catch all the birds to see if their beaks want a small bit chipped off; also look and see if their claws are too long and sharp; if so, I hold them up towards the light to see how far to clip off, so as not to make them bleed.

MY OWN VARIETY, CRESTS.

As the variety which I keep are Crests, I cut off their body feathers round by the vent, as by so doing you are more likely to get fertile eggs. The scissors I use are not straight ones, but curved at the cutting part. Now, having everything in readiness, we wait most patiently for the time to pair the birds for their most arduous duties which we expect of them. As my own room has no artificial heat whatever, and no sun till quite late in the day, I do not pair up till April, as the weather is mostly very cold even then, especially during the night. Care should be taken not to pair the birds before they are ready. I like to have the cocks in full song and the hens flapping their wings.. Then I put the hens in their respective cages, and give them a bit of moss to play with; if they carry it about I put the cock birds with them, and give them a nest pan with a felt lining.

I cut my own felt into shape, so as to fit the pans; cut it round about the size of the pan at the top, and clip four small V-shaped pieces from it. The small bits left from the cutting I pull to pieces, and they make good nesting material, so there is no waste. I stick the linings down with a little paste, and well sprinkle with Keating's Insect Powder.

GENERAL MANAGEMENT.

I use sawdust for the cage floor, but always have a tin of Dobbie's Grit hanging in the cage; also a piece of cuttlefish for them to peck at. I have noticed the hens eat much more just before they lay their first egg, and it is a good sign when to expect them. After the birds are paired up, I give them egg food every other day, and a few dandelion leaves (if able to get them), but I well wash them in salt water and dry them afterwards; I also give soaked rape seed.

Baths I give very often, and open the window of the bird room every day. In the very hot weather, to keep the room cool and sweet, I mix a little Condy's Fluid in water, and spray it about the room floor. As soon as the hen has laid her first egg, I take it from the nest and substitute a china one for it, and so on till she has laid her third egg. I replace the good eggs on the evening of the third day, and well sprinkle them with Keating's Powder, so as to keep the red mite down as much as possible. I repeat the dusting the day before they are due to hatch.

I have a box with numbers corresponding with the cages to put the eggs in as I take them from the nest, and turn them over every day. During the time of incubation, I feed the hen on plain canary seed, and a little egg food two or three times, and I think by so doing the hen is not so liable to go wrong when she commences to feed the young. The night before the eggs are due I put a little egg food and crushed hemp seed in the cage. The way I make the egg food is to boil a new-laid egg hard, press it through a sieve, mix it well with powdered Osborne biscuits, with a little sugar added, two or three biscuits to an egg when the birds are small, and increasing the biscuit when getting older. In preparing the soaked rape seed, I put cold water on it one day, strain, and well wash it the next, and if good seed, and in a warm place, it soon shoots out; I also crush the hemp seed —which I use ad lib—every day, as it soon goes wrong. I give a little green food after the young are three days old—watercress or lettuce.

CARE OF THE YOUNG.

I make a practice of feeding the hens when they have young ones as soon as it is light in the morning, but I have the egg boiled over night, and just have to mix it up. Quite fresh food is, I think, a great inducement for the hen to feed, and is also much better for the young ones. I may say I go back to bed again after having fed and looked round to see if all is well. I also feed them at 8 o'clock and am fortunate to be able to give them fresh food several times in the day; but I know several of our bird fanciers have to be away from home most of the day. When the youngsters are about a week old, I give them a new nest, which has been well sprinkled with Keating's, taking care to burn the old nest at once, in case there are any red mite. As the feathers begin to grow on the nestlings, I keep a sharp look-out to see if the hens or cocks start to pluck the young, as they will soon want to nest again. If they begin to pluck them I give them some nesting material, and a fresh nest pan, and this generally stops them for a bit; I also transfer the young to a nursery cage—if it should be a double breeding cage, to the spare compartment, and have a wire partition for the old ones to feed through.

If they do not pluck them, and the hen has not laid again, I leave them with their parents till about a month old; but it is best to watch and see if they are able to feed themselves before taking away.

WEANING THE YOUNG.

When the young are first taken away I feed on egg food, milk sop (with a little sugar and maw seed added), crushed hemp, but try to get them on to hard seed as soon as possible by cracking the canary seed at first and mixing with the hemp, then gradually reducing the soft food and hemp. Green food I do not give the young ones.

I use sand and crushed egg shells for the young birds, as they are not over particular what they eat at first, and I don't think sawdust is good for them.

If there are any good enough for our young bird show I put them in separate cages, as young birds are very fond of plucking each other. A good plan I have found is to tie several pieces of thick string on the cage wires, and it is amusing to see them play with it, whilst it keeps them out of further mischief. Two or three times a week I give them some of Parrish's Chemical Food in their water—just enough to colour it—and it seems to help to keep them in good condition till they are through the moult, which they start from eight to twelve weeks old.

ONE HEN OR TWO, WHICH?

Some people run one cock to two hens. I have done so, but only with a very vigorous cock bird. I do not let that cock bird feed any young, as I keep a few common Canaries to act as foster parents, and bring up some of the better bred birds. I believe in one cock to one hen, especially if you have no feeders, as the cock is such a help in rearing the young when the hen is going to nest again. It is not wise to take more than three nests, and with young hens only two; but it is a job to keep some of them from laying, even if the cock is not with them. I part the birds early in July, unless there are a few young to finish off, as by breeding too late the cold weather comes before the young are old enough to stand the trying time of moulting. Sometimes I mix a little crushed cuttlefish with the egg food when the hens are feeding the young, also when they are old enough to feed themselves.

(To be continued.)

THE YORKSHIRE UNION.

The first Council meeting of the newly-constituted Yorkshire Union was held at the Market Tavern, Godwin-street, Bradford, on Saturday, May 4th, 1907. Mr. H. W. Battye (Huddersfield), the president of the Union, occupied the chair, and Mr. John Greaves, vice-president, was also in attendance. Twenty-two societies were represented by over forty delegates.

The result of the ballot for the election of officers and revision of rules for 1907-8 was announced, and is as follows:—

President, H. W. Battye; vice-president, John Greaves; trustees, J. E. Brotherton and O. Mitchell; auditors, R. Halliday and F. Armstrong; secretary, Fred Hammond. Rule 8. The amendment to allow the vice-president to act as delegate, if required, is carried. Rule 11. As the old rule stood no person was eligible to judge at a winter show held by the society of which he was a member. The amendment, which is carried, provides that a judge officiates wherever he is drawn by the ballot. Rule 13. This debarred judges of Union shows from sitting on the Council. The amendment that this rule be struck out entirely is carried.

Rule 18. As a result of the amendment having been carried, partnerships must be registered with the Union secretary on or before the first day of May (instead of September) in each year. Arrangements will be made to meet the case of the present year.

Rule 24. This rule provides that secretaries of societies holding winter shows must send the total number of entries to the Union Secretary in such manner as to be in his possession not later than nine o'clock on the Wednesday morning preceding the show. The following proposed addition is carried, viz.:—"Should this rule operate harshly upon any society, the Council may, on such being reported by the society, make such other arrangements as they think will meet the case." Rule 39. Proposed alteration No. 1 is carried and provides that in the novice competitions no more than the four highest birds of any competitor in each or either section (Yorkshire and Norwich) shall count for points. Rule 39. Proposed addition to No. 2 reads as follows:—"The novice medals shall be divided between the Yorkshire and Norwich sections in the following proportions, viz., three-quarters for the Yorkshire section, and one quarter for the Norwich section." This is also carried.

Applications for membership were received from the Keighley, Bingley, Bolton Woods, and Shipley societies, and were accepted.

Mr. H. H. Towers (Shipley) was elected treasurer to the Union.

The annual subscription per member was fixed at eightpence for the present year.

The Council decided to allow societies to make their own arrangements regarding Open and Members' First Feather Shows for this season, but request that, as an act of courtesy, each other society keep clear, so far as is possible, of the dates already fixed for Open Shows, which are as follows:—June 8th, Great Horton, and June 22nd, Bradford (West).

The offer of the late Amalgamated Yorkshire O.S. to hand over to the Union a case of drinkers, 5,000 cage labels, the H. W. Naylor Challenge Cup (value £5 5s.), and the Yorkshire Amalgamation Challenge Trophy (value twenty-five guineas) was accepted. With regard to the latter, Mr. W. H. Shackleton, the donor, had an amended offer to make, it having come to his knowledge that the scheme as at present in vogue did not give entire satisfaction. This gentleman, being the winner last year, generously decided to forfeit such win in order that an entirely new start might be made. His present offer also increases the value of the gift to thirty guineas, which will be divided as follows:—1st prize, £15; 2nd prize, £10; 3rd prize, £5; 4th prize, a gold medal, value £1 10s. The premier prize must be won three times before it becomes the absolute property of any competitor, on the same conditions as governed the competition last year, under the Amalgamation rules. When this is won outright, the other prizes will be awarded to those having gained first, second, and third most points respectively, apart from the actual winner of the first prize, during the time the competition has been open. In accepting this noble offer the Council decided to award medals each year to the winners, valued at £1 for first, 15s. for second, 10s. for third, and 7s. 6d. for fourth.

The folding show cage label as used by the Amalgamation last year was adopted by the Council for use at shows under their rules, and instructions were given for an order to be placed for the supply of 12,000 of these labels.

A list of judges' names was prepared, to be submitted to each society in the Union, who will be asked to vote for twenty.

It was resolved that secretaries of societies be requested to forward to the Union secretary a list of their respective members' names and addresses, together with the annual subscription of eightpence per member, not later than June 10th. The number of novice medals to be awarded during season 1907-8 was fixed at twelve.

The Secretary was instructed to write to the secretary of each society to ascertain which societies intended holding an Open Winter Show during the coming season. All societies holding such shows will ballot for date of same. It was left to the secretary to call the next meeting as soon as practicable. Mr. Battye proved an efficient chairman, and the meeting tendered thanks for the able manner in which he had performed his duties.

"CAGE BIRDS," 154, FLEET STREET, LONDON.

CLUB REPORTS.

READING AND DIS. C.B.S.

Meeting held May 1st. Secretary informed meeting that, in connection with the 30-mile radius show, to be held on December 11th, the Palmer Hall had been secured, and Mr. J. Robson would judge. CAGE BIRDS offer was accepted, and the committee guarantee to spend 25s. in advertisements. Mr. W. Wooldridge delivered a very able address on "My Experiences as a Canary Breeder," a very interesting paper, and thoroughly appreciated by all present. Mr. Wooldridge was accorded a hearty vote of thanks for same. It was suggested to have a summer brake outing to Bramley, on or about June 22nd, for members and friends, to be fully discussed at next meeting, June 5th. At next meeting our esteemed ex-Chairman, Mr. J. North, will give the address. A good attendance is requested.

G. A. CHARLES, Sec.

NATIONAL BRITISH B. & M.C.

Committee held April 25th. Present:—Mr. Robson (Chairman), Messrs. Vale, Silver, Dobson, Hathaway, Lott, Maxwell, Dewhurst, Trower, Cooper, Barker, Fawkes, Weston, Fulljames, Goodchild, Plumbridge, and Carr. Proposed by Mr. Fulljames, seconded by Mr. Weston, that the club's outing take place in Epping Forest on May 25th. It was also unanimously carried that the 9.33 a.m. train from Liverpool Street to Loughton, for those that wished to go down early, and the 1.2 p.m. for the remainder, and refreshments be served at six o'clock. Letters were read from the Provincial Committee, re British Bird list. Mr. Dewhurst, in supporting his proposition, said he should like to see the list open to all British birds, for there were many birds kept successfully that never saw the show bench, because they were not in the club's list, and he thought that if the list was open it would give visitors, as well as young fanciers, an opportunity of seeing a greater variety, and rarer birds. He knew from personal experience that some of the smaller waders and plovers could be kept as successfully in a cage as some of the seed-eating birds. This was strongly supported by Messrs. Cooper and Maxwell. Mr. Fulljames said the present list had satisfied nearly everybody up to the present, for only last year notice was given for certain birds to be added to the list, and only two took the trouble to reply, which, he thought, showed that the majority were satisfied with the present list. He thought there were birds in our present list that ought not to be there, for they were not desirable cage birds. In his opinion, to do away with the list would be a great mistake. After a lengthy discussion for and against, an amendment was proposed by Mr. Weston, seconded by Mr. Goodchild, that a Sub-Committee of three be formed to add certain birds to the list they thought proper, and submit to the General Committee at the next meeting. This was carried by a majority of three. Proposed by Mr. Hathaway, seconded by Mr. Cooper, that the three names for the Sub-Committee be voted for by ballot. The three gentlemen gaining the highest number of votes were Messrs. Silver, Dewhurst, and Fulljames. Proposed by Mr. Maxwell, seconded by Mr. Cooper, that Mr. A. C. Rouse become a member of the London Committee. The following new members were elected:—Mr. S. W. Birchley, Eythorne, Cbufchldown, Cheltenham; Mr. T. Sandiford, 296, North Road, Preston. A hearty vote of thanks to the Chairman concluded the meeting.

PLUMBRIDGE and CARR, Secs.

THE YORKSHIRE CANARY CLUB.

Special meeting, for the presentation of the prizes won by the successful members for the season ending June, 1907, at the Oddfellows' Hall, Bradford, on April 27th. In the absence of Mr. Brotherton, Mr. David Sunderland was asked to preside and present the prizes. On rising, Mr. Sunderland expressed the pleasure it gave him in being able at any time to fill the place of any member of any Society, if by so doing he was helping the Fancy; nothing gave him greater pleasure than helping his brother fanciers. In presenting the prizes to the successful exhibitors, Mr. Sunderland spoke of the good work the Yorkshire Canary Club had done in the past in the encouraging of the breeding and exhibition of the Yorkshire bird, and he hoped that in the years to come the club would still go on in the same straightforward manner. Messrs. Bailey and Swanger won the £21 Challenge Cup and Medal for the second time. Mr. Bailey, in replying, said he was pleased to have the honour of again being at the top of the Y.C.C. list, and he promised his fellow fanciers that next year he would again be a hard nut to crack, as he was determined to try and win the cup outright. Mr. Joe Wilcock won the £2 2s. special, given by Messrs. Bailey and Swanger; Mr. W. H. Shackleton won the third prize, a beautiful teapot, given by Mr. J. W Ramsden. Mr. Cuthbertson, of Darlington, won outright the Taylor's Challenge Cup, value £10 10s. On receiving this most beautiful trophy, Mr. Cuthbertson remarked that this was one of the happiest moments of his life in the Fancy, and that he would always feel proud to show any of his North Country fanciers such a handsome cup, this being the first time he had had the pleasure of being present at any of the Y.C.C. meetings, although he had been a member for a great number of years, and he would try to attend more in the future. He should always take a great interest in the club, and do all he could to encourage the breeding of the Yorkshire bird in the North. Messrs. Ogden Bros. won the cup, value £2 10s., presented by the Chairman (Mr. J. E. Brotherton), also first prize in the open money competition, teapot presented by Mr. J. W. Ramsden This was a notable performance on the brothers Ogden's part. Starting the year as novices, they gained more points than any of the professionals in the above competition. Mr. Denton (the oldest novice we have in the Bradford district) won second prize, a teapot presented by J. W. Ramsden. In presenting this prize, Mr. Sunderland congratulated Mr. Denton on his success, and hoped that all young fanciers would be like Mr. Denton, triers, and not give up because they did not win first prizes at every show. Mr. Denton caused much merriment when called on to reply. He said he was very sorry to leave the novices in the cold seeing that he had been with them for the last 33 years, and that until this season he had never won a first prize in open competition. He would like to know what rule would fit his case, as he still wanted to be a novice, so that he could look after the young fanciers, and give them his fatherly advice. A hearty vote of thanks was passed to Mr. Sunderland for so ably conducting the meeting, which was carried. Mr. W. H. Shackleton, Mr. Hammond, Mr. Garnett, and others spoke. The meeting was well attended, and a very pleasant evening was passed. New members were enrolled, and some very good specials were given for next season's competitions.

W. MUNDELL and MATT. BROADLEY, Hon. Secs.

DARLINGTON C.B.S.

Meeting held May 1st. Mr. R. Todd in the chair. The principal business was the classification and judges for show November 30th. Decided that we make an additional class for unflighted Yorkshires, and three classes for Border Fancy, and selling class for Mules or British birds. The following were elected as judges:—Canaries, Mr. J. C. Barnes, Sheffield; Mules, British and Foreign birds, Mr. H. W. Axe, Doncaster.

E. BRUNSKILL, Hon. Sec.

REIGATE F.A. (C.B. SECTION).

Meeting held April 29th, at Mutton's Hotel, Redhill, when upwards of 30 members were present. Mr. F. J. Green, of Redhill, was appointed Chairman, and A. W. Bacon, Hon. Sec., and a Committee selected. A paper was read by Mr. Green on "Breeding Rearing, and Exhibiting Canaries, especially the Lancashire Canary." He also laid before the members a quantity of bird room requisites. Great interest was taken by all present, and considering it was our first meeting I think it looks very well for us. A. W. BACON, Hon. Sec.

ULSTER O.A.

Committee meeting held 24th ult., Mr. J. Barclay in the chair. It was passed unanimously that the very best thanks of the Association be given to the proprietor of CAGE BIRDS for sending, at very heavy expense, a representative to report the annual show held on December 7th and 8th last, which they believe to be the first time that a cage bird journal has sent a special reporter to the North of Ireland, or perhaps Ireland, on a similar purpose. This no doubt may appear belated, but this being the first committee meeting since the show accounts for it. ROBERT TRIMBLE, Sec.

GLASGOW AND WEST OF SCOTLAND N.M.B. AND F.B.A.

Meeting held 2nd inst., Mr. R. Eastman, President, presiding. A large and enthusiastic committee, with J. Brown, 97, Petershill Road, Glasgow, Sec., and M. Craig, Tolleross, Asst. Sec., were appointed for the show on November 15th and 16th. Large and extended classification will be given, including six classes for Yorkshires, with a judge all the way from Bradford to place the cards. Full prize money, amounting to 36/- per class, will be paid throughout the show, and a bumper entry is expected to reward the Association for their enterprise. It was also resolved to admit fanciers from far and near to membership as associates on payment of 2/6, and the Secretary will be pleased to hear from anyone wishing to join. Further particulars will be published later on.

J. BROWN, Sec.

WALLSEND AND MID-TYNE C.B.A.

Meeting held April 25th, Mr. Macdonald in the chair. Mr. T. C. Crawhall, of Newcastle, read a paper on "The Yorkshire Canary: A Beginner's Experience," which was listened to with great attention by the members present. They were well repaid by the excellence of the paper, and the lucid manner in which it was delivered. After a great deal of discussion, and complimentary remarks on the lecture, a hearty vote of thanks was awarded to the lecturer for his paper. Mr. Crawhall replied, and said he was only too pleased to be among us. Three new members were enrolled, and Mr. T. Robson was agreed on to judge our Nest Feather Show on July 25th. It was also agreed to join with the Newcastle Society in regard to our trip on Whit-Monday. J. R. EVANS, Hon. Sec.

COLOUR FEEDING.

THE ORIGINAL CROOK C.B.S.

Meeting held May 4th. H. Dixon presided. Twelve new members enrolled and 22 nominated. It was decided to hold First Feather Show June 9th; judge, George Sweet. A. BOWES, Sec.

BRIGHTON F.F.A.

The monthly show of the Brighton Fur and Feather Association was held at the Unicorn Hotel, May 2nd. The special prize for the best exhibit was won by Mr. C. F. Pavey with a light Mule; and Mr. H. T. Gibb won the special for the best British bird with a Goldfinch. CANARY: 1, Gravett. BRIT. BIRD: 1, Gribb, 2, Roast; 3, Miss Holmes. A.O.V.: 1, Pavey; 2, Roast.

CITY OF BIRMINGHAM C.B.S.

Meeting held 1st inst. A very interesting and instructive lecture was delivered by Mr. J. A. Eckersley, of this city, his subject being the "Breeding and Exhibiting of the Norwich Canary." A large number of the members and their friends were present, and a very enjoyable meeting terminated with a hearty vote of thanks to the lecturer.

H. C. WILKINS.

BATTERSEA AND DIS. C.B.A.

At our last two meetings we were favoured with lectures from Mr. A. Silver on "British Birds, and how to feed them," and Mr. J. Dewhurst on "Cages, and how to make them." By the interest which the members took in them they must have been beneficial and instructive. It was announced that we hold our open Young Bird Show on July 3rd.

F. EASTERLING, Hon. Sec.

ARBROATH SCOTCH FANCY C.C.

Meeting held on the 2nd inst, when the following office bearers were elected:—Hon. President, the Right Hon. the Earl of Strathmore; Hon. Vice-President, Conway Fletcher, Esq., of Letham Grange; President, Mr. J. Strachan; Vice-President, Mr. C. Crockatt; Treasurer, Miss Maggie Black; Secretary, J. S. Napier, 52, St. Vigeans Road. Nine of a committee were also appointed. It was also arranged to endeavour to get the White Hart Hall for Annual Show, which is to be held on October 26th. J. S. NAPIER, Sec.

WELSH NATIONAL C.B.S.

First Table Show of British birds and Mules was held at Marsels Arms Hotel, on April 23rd. About 50 birds were staged; judge, Mr. W. A. Truscott. GOLDFINCH: 1, spl, Prosser; 2, White; 3, Stamp; 4, F. E. Jones; hc, c, Williams; he, Humphries. GREENFINCH: 1, spl, Prosser; 2, Williams; 3, White. LINNET: 1, N. H. Jones; 2, Burridge; 3, Price; 4, Williams; vhc, hc, c, Prosser. SISKIN, REDPOLL, ETC.: 1, Burridge; 2, Jones; 3, 4, Prosser; vhc, c, Williams; hc, White. BRAMBLEFINCH: 1, spl, Morgass; 2, 3, Prosser; 4, he, Jones; vhc, c, McBeth. BULLFINCH: 1, McBeth; 2, Bancroft, jun. A.V. MULE: 1, spl, Williams; 2, Morgass; 3, Jones; 4, Burridge.

KILMARNOCK C.B.F.S.

At a large and representative meeting of the Kilmarnock Cage Bird Fanciers, held May 4th, it was decided to hold our first show on November 16th, in the Art Gallery Halls, open for all sections of cage birds. If any club should desire to hold their show with us we will be pleased to enter into terms with them. As we intend this show to be a great success, we are prepared to give good classification and liberal prize money. The following gentlemen have been appointed as office bearers:—Hon. Presidents, J. B. King, Bailie Munro, Captain Geo. Willison; Hon. Vice-Presidents, Alex. Millar, C. S. Reid and Gavan Alston; President, G. Adamson; Vice-Presidents, J. Calderwood, J. Hutchison; Committee, J. Noble, W. Guthrie, W. Cowan, J. McFadzean, D. McBride, W. G. Muir, J. Cram, R. McCaw, H. Train, W. C. Cunningham, J. Reid, J. Wyllie, J. Smillie, J. Jones, G. Blair, A. Morley, A. Mackie, and J. Caldwell; Secretary, Wm. Watson, 49, Glebe

GLASGOW AND WESTERN COUNTIES N.M.B. AND F.B.C.

Meeting held April 27th, Mr. P. Pettigrew presiding. The usual business over, and two nominations for membersbip taken place, a lively discussion of a social nature arose, anent pic-nics and rambles. It was resolved to have a ramble on Saturday, June 8th. The Chairman said that it was imperative the club should appoint an assistant secretary; there being such a large provincial membership, it was desirable he should be a provincial member. After an animated discussion, Mr. Wm. Jack, Larkhall, was appointed. Show results; Messrs. Young, Edwards, Stewart, and Brannigan judges:—GREENFINCHES (18): 1, Rodic, good wings, splendid head, rich colour, feather faultless; 2, Martin, nice chest, good head, deep in colour, the best of condition; 3, Lawson, good exhibit, hardly the substance and bloom of winners; 4, Henderson, marvellous bird for size, head, and chest, inclined to drop wings; vhc, Davies; hc, Lawson; c, spl, McKennie. BULLFINCHES (12): 1, Lawson, splendid cap, back, and bars, good scarlet vest, in the pink of condition; 2, Rodie, splendid head and cap, rich colour, a shade broken on left bar, otherwise lovely condition; 3, spl, Renfrew, nice sweet hen, shown in faultless condition; 4, Henderson, splendid bars and wings, richest scarlet vest, inclined to be unsteady; vhc, Brownlie; hc, Roulston; c, Conley. BRAMBLEFINCHES (8): 1, Park, good size, nice spangle, shown in A1 condition; 2, Brownlie, rich head, splendid wings and spangle, nicely tanned; 3, A. Roulston, rich colour and spangle, well tanned, knows his work, a little broken in tail; 4, Gillics, good substance, rich spangle, well tanned; vhc, Davies; hc, spl, Renfrew; c, Martin. CHAFFINCHES (10): 1, Marlin, nice rich head, splendid wings, quality, shape, and condition, all there; 2, Renfrew grand size, splendid head, a beauty all round and a good one to beat; 3, A. Roulston, bold upstanding position, good head, splendid colour and condition; 4, spl, Brownlie, not so large, otherwise quite as good; vhc, spl, Shearer; hc, Henderson; c, Davies. Next meeting May 25th, 6 p.m. Following classes:—Yellow Bunting, A.O.V. Bunting, Lesser Redpoll, A.O.V. Small British, with numerous specials to be competed for. All communications to Wm. Jack, 14, Bellfield-st., Larkhall, or J. H. Adam, 15, Alexander-st., Sandyford, Glasgow.

A correspondent of "The Manchester Guardian" states that he has found a number of poisoned rooks in his rookery, and wonders if the farmers in North Cheshire are putting down poisoned grain.

We were very pleased to see the sketch of our yellow Yorkshire cock, but we should like to correct your printer's error. It should be W.C.O.S., Plymouth. We consider it a life-like drawing of the bird, and is exactly how it stands in its cage. This bird was bred by us in 1904, and has won at several of the leading shows, including Swansea, Cardiff, Gloucester, Barnstaple, Hayle, etc.—PARNELL AND SON.

FIRST FEATHER SHOWS.

The dates fixed for First Feather Shows are inserted in this column free of charge. Secretaries should notify us of same as soon as decided upon.

SHOW ADVERTISEMENTS
(TARIFF ON APPLICATION).

HARPENDEN, WHIT-MONDAY,
Horse Jumping and Driving Competitions, Dogs.
POULTRY, PIGEONS, RABBITS and CAGE BIRDS. Entries finally close in all Sections **Monday, May 13th,** to the Secretary.
J. B. Townend, Station Road, Harpenden.

Mr. R. L. Crisp has made a good start, having fifty-six young birds already out. If the quality comes up to numbers, the Elm Park-road team will be hot stuff. Mr. Crisp is a trier.

Mr. H. Hope, of 50, Tivoli Street, has been elected Assistant Hon. Sec. of the Cheltenham Cage Bird Society, vice Mr. T. Nash King, who has left the town. The First Feather Show of our Cheltenham friends will be held on June 29th.

From Mr. W. Norris, the Hon. Sec. of the British Roller C.C., we hear with the greatest pleasure that the membership list of the B.R.C.C. has been increased by no less a number than twenty-five names. This says much for the advance of the cultivation of Rollers in this country.

The N.B.B. and M.C. ramble through Epping Forest will take place on Saturday, May 25th. Trains 9.33 a.m. and 1.2 p.m. from Liverpool Street Station to Loughton. All fanciers desirous of taking part in the ramble kindly drop us a post-card by the 20th, so that we can arrange for refreshments.—PLUMBRIDGE and CARR, 2, Broad Street Station, E.C.

Mr. C. H. Houlton, we hear, is engaged to judge at Wallasey, July 6th; Birkenhead, July 10th; Runcorn, August 10th; Newcastle, October 18th; Manchester, October 25th; Oswestry, October 31st; Cleator Moor, November 2nd; Warrington, November 8th; Nottingham, November 16th; Hull, November 22nd; St. Helens Rees F. and F., November 23rd.

"I take this opportunity of voicing my appreciation of your very valuable paper. Especially was I interested in your recent Norwich Plainhead Competition, which I thought most instructive for those who, like myself, have not a long experience of the hobby and are therefore not very competent to act as judge! I trust that you may see your way to have another such competition."—ALEX. G. FORREST, High-street, Perth.

We owe an expression of regret to Mr. Lilley and the members of the South-West London C.B.S. for a regrettable slip in connection with their "Club Notice," which appeared in our last issue. By an unfortunate slip of the blue pencil it appeared as though the business of the meeting was a Young Bird Show, whereas it was to arrange matters in connection with such a show on June 22nd. It is due to Mr. Lilley to make this explanation, which we do most readily.

The following judges have been appointed to officiate at our next show:—Norwich Plainheads, J. Ferguson (Glasgow), and W. Vardy (Hucknall Huthwaite); Crests, J. McLay (Kirkintilloch); Scotch Fancy and Belgians, A. Patterson (Edinburgh), W. Rodger (Slateford), J. Hogg (Oakley), and W. Melrose (Galashiels); Border Fancy, J. Watson (Selkirk), T. McCreadie (Dumfries), and P. McKenzie (Kelso). Cinnamons, Yorkshires, Lizards, etc., H. W. Battye (Huddersfield); Mules, British, and Foreign, T. Stewart (Edinburgh), P. McQuiston (Ayr), and A. R. Langlands (Montrose). As the judging will take place on January 1st, we have appointed five extra judges, making a total of fourteen in all. This will enable us to have the show open to the public at an early hour.—JAS. WINTER, Secretary Scottish National C.B.S.

The Norwich Plainhead.

Mr. Mathes, the Hon. Sec. of the Southern Norwich Plainhead Club, has called a meeting to consider the question of type in the Norwich Plainhead, to adopt a model, and evolve a standard at the Raglan Hotel, Aldersgate Street, E.C., on May 23rd, at 7.30 p.m. As the meeting is open, it is to be hoped that all who are interested in the culture of the Norwich Plainhead in the south will attend the meeting whether members of specialist clubs or not.

Green Food: is it necessary?

Is green food necessary? was a question raised by Mr. Founds at a lively little meeting of Wimbledon C.B.S. last Monday night. An interested company of bird keepers, including quite a remarkable sprinkling of the fair sex, had foregathered for the purpose of hearing a lecture by Mr. J. Robson. It proved to be as eminently practical and thorough as one would expect from the lecturer's reputation. The discussion which followed was a vastly entertaining one. The query raised at the start of this paragraph found quite a number of speakers, who declared that green food was not necessary. The evils associated with watercress were dwelt on. That sterling fancier, Mr. Easterling, declared against green food, and said that his birds had been in better health ever since he gave up its use and substituted scalded rape. The lecturer said that young birds were better without green food after they were taken from their parents, though he advocated giving the parents green food whilst they were feeding the young. The meeting closed with a hearty vote of thanks to the lecturer, and to Mr. Piper, who occupied the chair. The officials of this society are to be unreservedly complimented upon their manner of conducting it, and more especially for taking such trouble to interest the ladies in our hobby. The refining and improving influence of woman is well evidenced in these gatherings of cage bird men.

Mr. P. Yowed has removed to the Imperial Hotel, Prescot.

Mr. G. H. Billett has been engaged to judge Deal Show on October 9th.

Mr. A. Wellings has removed back to his old address, 8, Rawson Street, Prescot.

Ilkeston Show will be held on December 9th and 11th, so writes Mr. T. Smith, the Hon. Sec.

Stockport First Feather Show is fixed for June 11th and 12th. Mr. H. W. Battye will judge.

Mr. A. M. Baird, the secretary of the Paisley O.S. (cage bird section) has removed to 23, Neilston-road, Paisley.

Mr. F. Eaton, late of Sheffield, has removed to 44, Shrewsbury Road, Stonebridge Park, Willesden, London, N.W.

Reading Show, open to a 30-mile radius, will be held on December 11th, in the Palmer Hall. Mr. J. Robson will judge.

Feathers to the value of £7 a bird are being yielded by some 100,000 Ostriches in the Oudtshoorn district of Cape Colony.

Mr. J. Fowler tells us that the Leck C.B.S. is going strong and its membership increasing. Its annual show is to be held on October 16th.

The West Bromwich C.B.S., which has been formed through the recent correspondence in CAGE BIRDS, promises, so writes Mr. T. Duffield, to be a great success.

Will the Mr. Nash who wrote us recently regarding some advertising matters, kindly furnish us with his address, as same did not accompany his communication?

At the last meeting of the Edinburgh Norwich and M.B.S., the secretary intimated that the annual show this year would be held in a new and larger hall, in Buccleuch-street.

When asking for Ramsden's pepper, don't be persuaded that any other pepper (probably giving much more profit to the dealer offering it) is just as good as Ramsden's; it isn't.—ADVT.

I had so many applications from my advertisement in your journal that I cannot reply to all individually. I sold the whole lot advertised to Mr. Andrews, of Olney.—J. WARD, Northampton.

The classification for Leith O.S. Show has been arranged as follows:—Scotch Fancies, eight classes; Norwich, six; Crests, two; Crestbreds, two; Borders, six; British birds, seven; Mules and Hybrids, two.—GEORGE BROWN, Sec.

Kindly thank all who answered my advertisement in CAGE BIRDS. I had so many applications I could not possible reply to them all. This shows what a splendid advertising medium your valuable paper is.—S. R. TURNER, New Lawley, Derby.

"The supplement you published last week I think most useful, not only to the novice, but also to the more experienced fancier, as the memory must be refreshed by reading such plain words from well-known men."—W. C. FREEMAN, Warren Wood, Hatfield.

Owing to business pressure Mr. J. Bennett has had to give up the secretaryship of the Wigan and District C.B.S., and the post has been accepted by Mr. W. Ridge. The First Feather Show of the Society will be held on June 29th, and the Back-end Show on December 7th, judge Mr. J. Trengove.

Linnets Draw 200 Listeners.

As evidence of the increasing interest which is being taken in singing contests, we note, from the official report, that at the contest at Newton-le-Willows, on Saturday last, no less than 200 lovers of song birds were gathered together to listen to the sweet-voiced competitors.

The Hundredth Date.

Last week we declared our intention of awarding an extra special prize to the society whose guarantee made the hundredth received for our column of "Dates Fixed." Eight more societies have come into line since last week's issue appeared, and the hundredth guarantee received was that of the newly-formed

KILMARNOCK C.B.F.S.,

which has Mr. W. Watson, 49, Glebe-road, as secretary. A singular feature about this guarantee is that it was decided on at the first meeting of the society, held last Saturday. It would seem a good omen for the success of the show.

OBITUARY.

Mr. GEORGE LAWSON, Stenhousemuir.

It is with feelings of deep regret that I have to announce the death of Mr. George Lawson (late of Culross), which took place at Stenhousemuir, Larbert, on Wednesday of last week after an illness of four months, in his sixty-eighth year. Having known Mr. Lawson for the last twenty-seven years (being only distant four miles from Culross (scarce a week passed but either my brother or I were there, or he at Oakley. Being Scotland's premier breeder and exhibitor of Scotch Fancy Canaries from 1887 (when he won the City of Glasgow Cup) up to 1902, I can safely say he bred more champions than all the fanciers put together.

Oakley, Fife. W. D. HOGG.

OUR FRONTISPIECE.

One of our oldest English breeds, the Lancashire, has long been closely associated with the county from whence its name is derived. Distinctive in character as it is in name, the Lancashire is a bird that appeals to all with whom the Fancy is not a matter of pecuniary consideration. It is a noble and imposing bird, combining the grace and style associated with the Yorkshire and Belgian, with the stoutness and massiveness of the Crested Norwich. Yet, whilst it possesses style, its carriage is totally different to that of the Yorkshire, and this characteristic pose Mr. Simpson has most happily caught in his delineation of Mr. Green's bird which to-day graces our pages. Recent articles, lectures, and discussions have drawn considerable attention to the breed which is somewhat neglected in the South of England, owing so, its devotees say, to its qualities not being known, and to a mistaken idea as to its delicacy. They say the Lancashire requires to be known to be understood, and once any breeder takes up the Lancashire in real earnest he seldom troubles about any other breed. That this is so is to be seen by the names of fanciers in Lancashire who for twenty and even thirty years have been breeders and exhibitors of the giant of the Canary family. Mr. Green, of Redhill, is a most prominent lover of the breed in the South, and it is to be hoped that his efforts to induce southern breeders to look more kindly upon the variety may be successful. In an age of physical culture such as this, a breed possessing grace and strength should be a great favourite.

ALTRINCHAM CAGE BIRD SOCIETY.

"PRIZE DRAW."

Winning Numbers as follows:

,, 3— 844	,, 7— 5	,, 11—4949	,, 15—1428
,, 4—1984	,, 8—2111	,, 12—3203	

SINGING CONTESTS.

WARRINGTON L.S.A.

The members and friends of the above, numbering 40, journeyed by 'bus to the Pied Bull, Newton-le-Willows, and met the champions of St. Helens, Leigh, Swinton, and Wigan, on May 4th, when Mr. T. Boardman gave prizes to the value of £3. The contest brought together 200 spectators. Some best time singing was heard. All present were highly satisfied, and each bird was given a fair chance. The judges were Messrs. S. Leigh and P. O. Neill. Timekeeper, Mr. T. Armitage. 1st, Armitage (Warrington); 2nd, Statham (Leigh); 3rd, Elleson (Leigh); 4th, Armitage (Warrington); 5th, Stanway (Warrington); 6th, Armitage (Warrington); 7th, Statham (Leigh). G. TRYNER, Hon. Sec.

A grand open contest for time singing will be held at Alexandra Vaults, Scotland Road, Warrington, on Whit Monday, May 20th, when the landlord, Mr. R. Thompson, will give £2 10s., to an entrance fee, 1/-, per bird.

G. TRYNER, Hon. Sec.
28, Cobden Street, Warrington. [ADVT.]

LEEDS.

Contest at Skinner's Arms, Bushingthorpe-lane, April 28th. Twenty picked birds competed before a packed house, and some grand singing was heard. The team of birds belonging to Mr. Galley was the best ever heard at this house, and was cheered by all. Judges, T. Raper and T. Summer; 1st, 2nd, 3rd, Galley; 4th, Whitaker.—C. HUNT, Sec.

The members and friends of the Prince Albert Inn Linnet Association met on May 5th to compete for four prizes given by Mr. J. R. Saynor. There were a large number of fanciers present. Eighteen birds sang for quality singing only. Judges, S. Green and B. Jackson. Timekeeper, G. Towers. The birds were in the pink of condition, and gave a good account of themselves to the satisfaction of all present. 1, 2, divided between Allen and Clark; 3, Chippendale; 4, Allen.—E. WOOD, Hon. Sec.

The quality Linnet singing brigade, at the Old Bird House, are having abundance of singing. On April 28th 21 birds competed for £1 in four prizes; judges, J. Melia, T. Crane, T. Somers. The birds gave a good account of themselves. 1, Clark; 2, Whitaker; 3, Stead; 4, Hoban. On the 29th 24 birds competed for four prizes; judges, W. Naylor, E. Worth. 1, Booth; 2, Hardcastle; 3, Hoban; 4, Nicholson. On May 4th 23 birds competed for three prizes; judges, W. Naylor, G. Tours. There was some splendid singing, to the satisfaction of all present. 1, J. Booth, 2, 3, shared by T. Stead and F. Galley. On May 5th 29 birds competed for four prizes. All the prizes were given by Mr. J. Booth. 1, Booth; 2, Hodgson; 3, Naylor; 4, Clegg.

J. MELIA, Sec.

Sir,—I am asked to state by our members, who are willing to match Mr. Booth's bird, that they think Mr. Allen wants no match, but plenty of paper talk simply for a cheap advertisement. On the last occasion when the backers of the same bird tried to make a match Mr. Allen insisted on the Editor of CAGE BIRDS finding judges, and that gentleman asked to be excused, which I think was the best course he could take. In the next place, he wants to sing out of Leeds, which plainly shows he wants paper talk. As Mr. Allen does not seem to come to reasonable terms, the members have decided to let it drop. J. MELIA, hon. sec.

Cage Birds = Annual =

And you will be delighted beyond expression at the value received.

Never was the bird keeper better catered for in respect of birdy literature than he is to-day, and nowhere can you find a handier, more practical, or complete guide to the hobby of cage bird keeping than I offer in CAGE BIRDS ANNUAL.

Listen to this conversation between a beginner and our publisher:—

Publisher.—Take one of our ANNUALS, Sir?

Beginner.—Not I. What do I want with an annual? I've got the weekly.

Publisher.—Without disparaging the weekly, Sir, the ANNUAL is a totally different publication. The ANNUAL is a handy work of reference. You find its value right throughout the year. You never know when it may come in handy—save a bird's life or give you exactly the item you want to know.

Beginner.—Will it tell me if there's a club in my district?

Publisher.—Yes. Here is a complete list of clubs, the names and addresses of the secretaries, fees, etc.

Beginner.—Yes; that's all right, but if there's something I can't understand—some technical term, for instance, will it explain that?

Publisher.—That's just where its value comes in. See the Glossary of Fanciers' Terms.

Beginner.—By George, that's handy! Will it also tell me how to breed Canaries?

Publisher.—Certainly! And also how to breed Mules and Hybrids. There is also a chapter on keeping a pet bird, and a most useful article by Mr. Sam Drake on "Rearing Young Canaries."

Beginner.—I think I'll take a copy. Stay, though, I'm not only going in for Canaries; I may take up foreign birds.

Publisher.—Then you ought to read Wesley T. Page's chapter on "Some Pleasing and Beautiful Foreigners."

Beginner.—But suppose any of my birds become ill. Where shall I find this ANNUAL come in then?

Publisher.—Just where you want it, Sir. The chapter on diseases is arranged in alphabetical order, and is most comprehensive in character.

Beginner.—It certainly seems a valuable idea.

Publisher.—Valuable! It's worth its weight in gold. Why look here, Sir, in addition there's a chapter on "How to Identify the Call Notes and Song of British Birds," a review of the exhibition year, a breeding register, a show record, a cash account, a list of cage bird judges' names and addresses, a list of the bird trade, a list of breeders and exhibitors——

Beginner.—Stop! stop! man; give me a dozen copies. I'll take them away and distribute them to friends as a public duty. However it's done for the price I can't see. Look here, pack up every blessed book you publish, and let me know how much you want from me.

Publisher.—Thank you, Sir; always ready to oblige. You see, we publish our ANNUAL as an advertisement.

The most serviceable, striking, yet tasteful and economical

LIVE BIRD LABELS

are those obtainable from "Cage Birds."

For the convenience of readers we have had printed a quantity of address labels suitable for use when despatching live birds on journeys by rail, etc. These are printed in red ink, on paper gummed at back, and are of most convenient size, 5½in. by 4in. A reduced facsimile appears above. Rates: 24 3d.; 50, 6d.; post free.

Address: The Manager, CAGE BIRDS, 154, Fleet Street, London, E.C.

"CAGE BIRDS" GREAT

CANARY BREEDING COMPETITION.

A BOON TO THE FANCY.

£28 CASH IN PRIZES.

Two Sections: (1) NOVICES, (2) OLD HANDS.

1. Only Noviee Breeders are eligible for the Novice Competition, a "Novice" to mean anyone who has never bred Canaries before.
2. The Prizes will be: **A**, Cup, value £5 (or Cash), First Prize; **B**, Cash, £3, Second Prize; **C**, Cash, £2, Third Prize; and **D**, Five £1 Cash Prizes for the next best in succession.
3. Prizes to go to the "most successful" breeders, meaning those of the competitors who are most successful in satisfactorily rearing the best average of healthy young birds during 1907. Canary breeding season now in progress.
4. The young Canaries must be bred by the competitors on or before July 15th, 1907, next. None bred after that date will be eligible.
5. All stock birds used must be the *bonâ fide* property of the Competitor.
6. Competitors must have the results of their breeding operations attested to by two responsible officials of any recognised Cage Bird Society, or may swear a declaration attested to by two responsible witnesses (form on application).
7. From now till the date of the Competition closing, August 17th, each issue of CAGE BIRDS will contain a Coupon, and when sending in the declaration competitors must enclose the whole series of coupons to show that they have been during the period regular readers of CAGE BIRDS.
8. The Editor's decision shall be final.

FIVE POUNDS Cash, or Cup to full value, at winner's option, is offered for the most successful Canary breeder of any experience. All breeders of one season's experience and upwards eligible. Same conditions as for Novices. The Editor's decision to be final.

We also invite the hearty co-operation of all readers in the following "rolling" scheme:—

THE "TELL SIX" PLAN.

By simply procuring SIX Signatures you may be able to win £6.

The plan is as follows: All you have to do is to tell six of your friends, unrelated to each other, about CAGE BIRDS' great Canary Breeding Competition, and persuade each of them to enter and tell six of their friends about it also. You send in to us the first six signatures to an undertaking to this effect, and if any of the signers are successful in our Canary Breeding Competition we will award you £1 for each successful competitor nominated by you. If any of the six people you tell fill up our forms as appended with signatures of six of their friends whom they have persuaded to enter, we will award them £1 for each successful competitor nominated by them. If two or more people nominate the same successful competitor the nomination prize will be divided amongst the successful nominators. The nomination forms must reach us by May 27, 1907, and the *bonâ fide* signatures and addresses in full of the competitors you have induced to enter must be given in each case. Here is the

NOMINATION FORM.

We, the undersigned, having carefully read, or had read to us, the rules of CAGE BIRDS great Canary Breeding Competition, agree to enter for the Competition and abide by the rules of same. We further, each of us, undertake to try and induce six of our friends to enter the Competition and tell six of their friends about it also:—

Full Name and Address.

1. .....
2. .....
3. .....
4. .....
5. .....
6. .....

The above are the *bonâ fide* signatures and the complete addresses of six intending competitors in CAGE BIRDS' Canary Breeding Competition, and I hereby nominate them to win one of your prizes. If any of them are successful I should like my prize money sent to me addressed as under:—

Name.....

Address.....

Every form sent in, if properly filled up, will entitle the sender, whether a successful nominator or not, to a set of picture postcards, "Dickie in the Dumps."

All forms must be sent in on or before May 27, 1907.

You need not necessarily enter for the Canary Breeding Competition to win one of the nomination prizes. It will be sufficient if a breeder nominated by you on one of our forms is successful in winning one of our prizes. That is to say, if he or she is successful you will be successful. If there is any point you are dubious on, write—

F. CARL, 154, FLEET STREET, LONDON, E.C.

Stoke Newington F.A.—May 14th, at Devonshire Square Church, 8 p.m. "Shall we join the Cage Bird Union?"—Geo. Dowden, sec.

Wandsworth and Dis.—May 16th, at Headquarters, 8 p.m. Our Annual Open Show Nov. 26th and 27th; secretaries please note to avoid clashing.—W. Summers, sec.

Watford and Dis. C.B.S.—May 13th, at George Hotel, 8 p.m. Annual meeting; election of officers, balance-sheet, etc.—W. Shirley, sec.

Wibsey and Dis. C.B.S.—May 11th, Meat Pie Supper, at 7.30 p.m. Tickets, 6d. each; all fanciers and friends will be welcome.—E. W. Johnson, sec.

Wigan and Dis. C.B.S.—May 13th, at Adelphi Inn, 8 p.m.—W. Ridge, sec.

Wolverhampton and Dis. C.B.S.—May 14th, at Vine Hotel, 8 p.m. Voting on rule 17 C.B.U.; election of representative; judging competition of British birds, Mules, and Hybrids.—F. Howes, sec.

York C.B.S.—May 13th, at All Saints' School Room, 8 p.m. A paper will be given on "Moulting and Feeding British Birds," by Mr. H. Shorney; all members and friends cordially invited.—T. Boyle, sec.

SHOW POSTERS

PRINTED IN 3 COLOURS—TYPICAL BIRDS.

PRIZE CARDS in black & gold.

Assorted Blocks of Norwich, Yorkshire, Crests, Belgians, etc.

—— SEND FOR SPECIMENS. ——

LYTHGOE, 3, Tib Lane, Cross Street, MANCHESTER.

QUESTIONS & ANSWERS

DOUBTS AND DIFFICULTIES SOLVED BY SPECIALISTS.

Queries will be answered under the following conditions:—

(1)—*All questions must be clearly written in ink (or typewritten) on one side only of paper, and must conclude with either the correct name of querist, or a pseudonym, or initials.*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper and enclosed with the query. In no case must the address appear on the query.*

(3)—*Queries intended for different specialists must not be written on the same sheet of paper.*

(4)—**Queries must not include** *or be included in orders for books, instructions re advertisements, or any other matter for publication.*

(5)—*The department to which the queries refer must be stated in bold letters on the left-hand corner of the query.*

(6)—*If an answer in the same week's issue is desired, queries must be posted to reach us by* **Monday's first post** *at latest. Queries will be dealt with in the order in which they are received, and only as space permits. The earlier queries are received the better attention they are likely to have.*

(7)—*Queries relating to illnesses of birds, except enquiries as to cause of death (for which see Post Mortems) will be answered by return of post on receipt of a postal order for sixpence and an addressed stamped envelope. Queries of an ordinary nature will be answered by post, if desired, on receipt of a postal order for one shilling and a stamped addressed envelope.*

(8)—*All who require letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence to pay postage expenses, &c., otherwise their letters will not receive attention.*

(9)—*All queries must be addressed* **the Editor, "Cage Birds,"** *154, Fleet Street, London, E.C. Only queries so sent will be answered. Postcards are not admissible.*

NOTE.—Readers are requested to carefully study past numbers and current issue before submitting questions. By doing so they may save trouble and unnecessary repetition.

THE following gentlemen represent CAGE BIRDS staff of **ADVISORY EXPERTS.** Queries must in no case be addressed to any of them individually, but to the Editor.

Norwich Plainheads.—**J. H. Payne.** Yorkshires.—**H. W. Battye.** Crests & Crestbreds—**W. E. Greeves.** Cinnamons—**J. North.** Miscell.—**"Old Judge."** Border Fancies—**J. Weston.** Foreign Birds—**Wesley T. Page,** F.Z.S., M.B.N.H.S., &c. Park and Lake Aviculture—**Frank Finn,** B.A., F.Z.S., M.B.O.U., &c. Wild Bird Life—**H. Norman.**

CANARIES.

NORWICH PLAINHEADS.

Answered by J. H. PAYNE.

Hen with Stomach Trouble.

M.E.P.—Give your bird in the drinking water twice in one week a piece of sulphate of soda about as big as a horse bean, letting it remain for half a day. Do not give any more bread and milk, only plain canary seed and German rape, two parts canary and one of the rape. I think she is over fat, consequent upon the excessive use of hemp seed you say she has had. Let her have dandelion leaves and a sprig or two of watercress three times a week.

Trouble Amongst the Hens.

Noah's Ark.—(1) I am of opinion that your hen died from inflammation of the intestines. (2) Give the hen six drops of paregoric, ten drops of glycerine and six drops of whisky in the drinking water, fresh daily, for a fortnight. Discontinue the milk sop whilst she is having this. Keep her covered over at nights with a warm cloth until the weather gets warmer.

Young Birds Dying.

Iron.—I think your young birds died through the hen not feeding them. Keeping the cock in the same room not in sight of the hen would not be conducive to success. The next nest do not take him away, and I think you will have better luck. Your feeding so far is quite right, but you do not say whether you let them have plenty of green food. When you get young again let the parents have a good supply of green meat—chickweed, lettuce or watercress, and if you can give it to them fresh two or three times a day so much the better. Also let them have as much hemp seed as they will eat.

A Sensational Record.

First Aid.—Yes, I am decidedly of your opinion that your record of seven years and not yet had a young one out of a nest will want a deal of beating, and it says much for your patience and pluck to keep on so long. You know the old saying of the long lane, and I trust that simile will be applicable to your case. You say neither of your birds have sung. I am strongly of opinion that you have two hens put up, and the fact that you have had all clear eggs strengthens my conviction. You say they are thoroughly well, being both fresh and bright, so why give them glycerine and whisky? You will do them more harm than good, so my advice to you is to stop it at once, and feed on the seed you are at present, with occasionally a little egg food. Procure a cock if you can and put with one of the hens, and I think you will soon have a nest of fertile eggs.

How Will They Turn Out?

Numan.—The young from the cock Norwich and the green hen will be pure bred, and you will get some variegated and lightly marked birds amongst them, with probably a self green, if you have the luck to breed a fair number. The progeny of the cock mated to a Yorkshire hen, of course, will only be cross breds, and will not be suitable in any way as show birds. You will find they will come much thinner in build than the young from the green hen. You may use the cock to the German hen if he is in good health and vigorous. This you can tell by his lusty singing and his lively appearance.

Dead and Thrown Out.

Chemical.—It seems strange to have five young birds lying dead at the bottom of the cage on one morning when six days old, and all well and being fed by the hen on the previous evening. I should fancy she must have got her feet entangled in the nesting material, and in the struggle to get free dragged them out. What material do you use for the nest? Some I know is sold with cotton wool amongst it, and this is the cause of many a nest of eggs and young being dropped out on to the cage bottom. I should advise you to let the cock stop with the hen with this nest you now have. I have had many cocks that would sit on the eggs when the hen was off, and they did no harm. I have generally found these turn out excellent feeders, and I see no reason why yours should not be. Try him.

Egg Binding.

Unlucky.—See my reply to "W.R.S." in last week's issue. As there will probably be an interesting discussion as the outcome of the letter you saw, look out for it in this week's issue. If the hen seems in good health, put her with the cock and let her go to nest again if she will.

Period of Incubation.

Novice.—(1) Thirteen days, but you must not count from the laying of the last egg, as many hens will commence to sit hard from the laying of the first. The best plan is to take out the eggs as they are laid, until she has laid three, substituting dummies, which you can fashion out of a piece of cbalk, and return them on the evening of the day on which the third egg is laid. Count 13 days from then. (2) Give hard boiled egg, chopped fine and mixed with biscuit, crushed, or home-made bread crumbs, about equal weights. Feed two or three times a day, putting a little the last thing in the evening, so that the old birds may feed first thing in the morning. Let them have plenty of chickweed, lettuce, or watercress, and as much hemp seed as they will eat. (3) Give the cock ten drops of glycerine, and ten drops of paregoric in the drinking water, fresh daily, for a fortnight.

One Pair Only.

Inquirer.—I think you will do well to remove the birds from the kitchen, where you say it is noisy, to the bed-room which has a southern aspect. Remove them when the young one is just out of the nest. Your feeding is quite correct, except that you may use the whole of the egg and not the yolk alone. Instead of soaking the hemp seed, let them have it dry, in a separate vessel, and as much as they will eat when feeding young.

No Results.

T. Becker.—(1) Continue to feed your birds as you are doing at present, and let them stay together for another week. If the hen does not then lay. I should say she is either barren or an old one gone beyond breeding. As you do not state the age of the hen, of course I can only assume the latter. (2) The hen is evidently in a backward condition, but in this case it does not make much difference, as there is yet plenty of time for Mule breeding. Instead of the egg bread give hard-boiled egg chopped fine and well mixed with equal weight of biscuit or stale home-made bread crumbs. Give a small teaspoonful three times a week; also give a good pinch of maw seed twice a week. A few dandelion leaves will be beneficial two or three times a week. You do not say if you are giving the first pair the egg bread or egg food prepared somewhat in the way I have advised. If not the latter, then do so.

Are they a Pair?

R.C.L.—As you are positive your birds are a pair, I think you will find they will shortly settle down and make headway. I think the hen is not yet quite in breeding condition, judging from what you say. Pulling the nesting material about and not building is a sign of this. Let them have a little egg food three times a week, and a few pinches of maw seed; also give them a few young dandelion leaves three times a week, and I think the hen will soon make her nest.

YORKSHIRES.

Answered by H. W. BATTYE.

Only One, and that a Cripple.

Ellis Dean.—There are many besides you that have been unfortunate this spring, and for a great deal of the trouble the miserably wet, windy and changeable weather has been to blame. You say you have only reared one youngster out of two nests, and from what I can gather from your letter, though you do not say so, both nests have been from the same pair of birds which you say are both in good, healthy condition, the odd young one being healthy too, but unfortunately a cripple, one foot being doubled up like a man's clenched fist. Well, occasionally birds do come out of the nest crippled on legs or feet, and speaking generally it is about even betting when there is only one youngster reared that this will be the case, the mother usually sitting too closely and heavily on it, having so little to do in the way of feeding, and the cold weather making her over anxious as well, both these causes combine to prevent the young one from stretching its limbs, and if it happens to have its leg spread out or its foot doubled up it very probably never gets a chance again to straighten it. I don't think your youngster will ever get right, and if it were mine I would kill it, but of course you will please yourself about that. I presume you have been keeping the pair together and as you say the hen is about to lay again I should advise you to take the cock away when she has laid, and let the hen sit and rear the young ones by herself, and then if she should hatch three or four young ones it will find her other employment than crippling her young, as she will have something else to do in feeding them, instead of sitting on the nest waiting for the cock to come and feed her.

Husky Hen.

T.C.—Your hen, that you say is rearing one young one, makes a husky noise, and pants. Perhaps this is only because she is a nervous hen. Some are very easily upset when feeding young, very few hens will bring an odd young one up as well as they will three or four, and this will account for this one being a little backward in comparison with others you have. You might try ten drops of the following mixture: Equal parts of glycerine, syrup of squills and whisky. This and better weather should put your hen right.

Hen not Fit.

Shunter.—Your hen is evidently not quite in breeding trim at present, perhaps she has been, and the cold weather has thrown her back again. You may have to wait till the warmer weather which we are so anxiously expecting. Then your hen will probably come proud, and go to nest all right. She will soon teach Mr. Cock Bird his place then. You are not alone. I have three hens myself, two young ones, and one I bred with last year. These have been building, etc., nearly a month and have not laid, but I am living in hopes of them doing so as soon as there is improvement in the weather. Should your cock bird persist in going to roost in the nest remove him into another cage each night, and return him the following morning. Your feeding is correct, except I would advise giving them a little egg food daily until the hen lays her third or fourth egg.

Two Eggs in One Day.

Dilemma.—I can hardly credit your hen having laid two eggs on one morning, but as you say she has done this on two separate occasions, and that both times one of the eggs was only partly shelled, it looks as if it was correct. I never had a similar case myself, but have known it to happen with poultry, with hens that have been fed on a very stimulating diet, the cause in my opinion being the eggs coming on very fast, and sometimes the birds not having sufficient grit. Try your hen on very little food, except canary seed, next round, giving an abundant supply of good gritty sand. You might crush to a powder a little oyster shell, and mix it with the sand.

Loss of Voice.

H. Banks.—Your bird seems to be in a very bad way, but while he eats and lives there is some hope. When this complaint becomes chronic it is only a question of relief with very little hope of a cure, but as your bird has only lately shown signs of asthma there is a chance of a complete recovery. Keep the bird warm and dry in a nice light place free from draughts. Stop all seeds, except white Canary seed, and give a little bread scalded with boiling milk, mixing with this six drops of syrup of buckthorn; give fresh every day. Let this be its food for one week. Then give a little egg food, with which mix ten drops of Parrish's Chemical Food and a little moist sugar, and over the lot sprinkle a pinch of maw seed. Give this one day, and the milk sop on the day you do not give the egg food for another week or ten days. Give in its drinking water ten drops of following mixture; Equal parts Tincture of Lobelia and antimonial wine. The bird should be kept open in its bowels and, to do this, if necessary, you might put a little treacle in its drinking water once or twice a week. Do as directed above, and you may hope to get your bird all right shortly.

CRESTS AND CRESTBREDS.

Answered by W. E. GREEVES.

Hen not Laying.

F.J.L.—There is nothing you can do to make your hen lay. This is no exceptional case. Unfortunately it is one that occurs in most bird breeders' rooms. I had a hen one year that built a nest but never laid an egg, but remained on the nest, so I put four eggs under her, three of which hatched out, and the hen brought them up. The fact that your hen laid last year is not a guarantee that she will lay again. Fulness at the vent is quite as noticeable with hens that don't lay as with those which do. If your hen does not lay within the next fortnight I should advise you to try another.

Hen with Diarrhœa.

P.G.M.—If your hen is still suffering from diarrhœa, give her lime water to drink until it ceases. This you can get from the chemist's. Give canary seed as a staple food, also give daily for a week an eggspoonful of egg food, over which put a few drops of Parrish's Chemical Food and just a pinch of maw seed, a small quantity of German summer rape may be given in addition every other day, but no hemp seed until the bird is quite well. If there are no signs of returning diarrhœa at the end of a week, give a small portion of dandelion leaf every other day, and when the lime water is discontinued, add six drops of Parrish's Chemical Food to the drinking water every day for a week. A bath on bright warm days would be beneficial. Do not mate to the cock until in good condition.

BORDERS.

Answered by J. PATTERSON.

A Stubborn Hen.

M.F.G.S.—There was nothing unusual in your hen insisting on making her nest in the bottom of cage, and you did quite right in placing the nest in the position she chose. Regarding the eggs, they are what we term proud eggs, and are the result of broken eggery. Are you supplying her with sufficient grit, cuttlefish bone, and eggshell? These all go to make up the substance which composes eggshell. It was unusually early for the hen to lay after removing her from the room. It was nothing unusual for her to lay only another two eggs after. Many hens are very irregular in the early part of the season. I have known many cases such as yours. The principal cause is changeable weather and the irregular temperature of the bird room. By your removal of her into your living room you were not assisting matters. Let her set and hatch the two eggs, and she will lay her full clutch next time. Many hens whistle a little, but not like a cock, as you state, their song being short and jerky, they never fill out in the throat same as a cock bird does when singing. Your feeding is a little at fault. Let them have a little German rape added every other day, on the days you do not give the rape give them a little egg food. No hemp till the young are hatched out, then give it daily; start with a teaspoonful for every four newly-hatched young birds, and increase the quantity as the brood gets older. Egg food thrice daily; mix a little maw seed into the last feed at night. Give the usual green food. I trust you may have a successful season.

Loss of Eyesight.

Novice.—Your query is a puzzle indeed. I should have liked a little more information how you treat your birds, the kind of cages you use, and what you paint or whitewash the inside with. I am inclined to think you are using some injurious substance somewhere in your management, and strongly advise you to overhaul your cages; have them covered with two good coats of nice sky-blue enamel; after they are so treated they are very easily cleaned, and there is no harbour for any insect, nor yet is there any projecting roughness to injure the eye. Are you not dusting insect powder over birds? If so, perhaps a little might have entered the eye and have caused the loss of sight you speak about. I shall be interested to have your explanation. For the birds affected, bathe the eye every morning with a weak solution of Jeyes' Fluid or permanganate of potash. I doubt if you will revive the sight of the eyes again; however, the above treatment will take away any inflammation.

SCOTCH FANCIES.

Answered by R. WRIGHT.

Sick Hen.

Novice.—Box cage and treatment through winter quite correct. Give a bit of apple dipped in glycerine in wires of cage, boiled rape seed three times a week, nine drops of Easton's Syrup in water to tone her up, and keep free from draught, with plenty of light.

LIZARDS.

Answered by BARKER CLEGG.

An Inhuman Mother.

Owen Davies.—The annoying part of this is that it is very often done before you have thought of adopting measures for the prevention. By the time this answer reaches you the young ones will be able to feed themselves, being then 32 days old. It is rather unfortunate for you, because the new tail and flight feathers will have light tips. These unfortunate occurrences have many times debarred an otherwise perfect bird from winning. Any way, you must take great precautions over the next nest. I would advise you to remove the cock to another cage, that is, after the hen has laid her complement of eggs and commenced to sit. Seeing that he is the chief sinner, you must not introduce him to the hen again until the young ones are out of his reach, either in a partitioned part of cage, or in a nursery cage which you may hang outside the breeder. Close the door; there would then be a double wire prevention, and the young ones would be able to get their beaks through for feeding, until they were weaned off. Select the most promising birds, and cage off in separate cages to prevent any further mischief of the young ones plucking each other. You must always endeavour to keep young Lizards (in fact, all young birds) as whole and perfect in feather as possible. Keep them in the shady part of the room, and very quiet. When they commence to moult, cover the cages well below the bar perches with brown paper, or your back numbers of CAGE BIRDS. This keeps them quiet and warm, assists the moult, and enhances the colour.

ROLLERS.

Fighting and Forsaken.

Josh-o'-Brum.—Your birds fight because the hen is in high breeding condition, and the cock is just the reverse. If he were all right, and doing his duty, things would go on smoothly. It is no use pairing up a cock bird which has gone through the moult and has not sung for six weeks. The three eggs the hen laid would not have been fertile. You will either have to get another mate for her, one in full song and vigorous condition, or separate them and feed up the cock, pairing them again when he comes in full song once more. They won't do any good as they are. Your feeding is right enough, as is proved by the condition of the hen. Mix four spots of Chemical Food with the cock bird's daily teaspoonful of egg food. Give a pinch of hemp seed one day, and a pinch of maw and niger mixed in equal parts the next day. Two birds in proper condition would not keep always fighting. They might have a row or two (or what looks like it) at the start, but should soon settle down.

A Bad Beginning.

Perplexed.—The cause of your trouble lies in you having changed your birds from a room having a fire in it to one unheated. If you wanted to do this, you should have waited until the warm weather came along. Of course, the wretchedly cold and wet weather we have been having has served to make matters worse for you. I should advise you to separate your couples, take away all nesting appliances, and then mate them again the first week in June (or last week in May, according to the outlook). In the meantime, feed up the stock well, but especially the cocks. Put some Chemical Food in their egg food, as recommended "Josh-o'-Brum" this week, and give them the hemp, maw, and niger. A spell of real summer weather would act as a tonic to your birds, no doubt, and you can certainly look for improvement when we get it. It might be a good move to get another cock bird or two, but this must lie with you to decide. At any rate, the present birds need a rest for a bit.

All Dead in the Shell.

J. H. Moore.—It is certainly very extraordinary to get 15 good eggs, and find every one contain a youngster dead in the shell. There may be many contributory causes, but it is not possible for me to put my finger on one and say for certain that this is it. Your birds may not be in really good condition, and as a consequence the germs may have been very weak—without sufficient vitality to hatch successfully. If so, it may be well to separate the couples for a week or so before going on to the next round, and feed them up a bit—and especially the cock birds. Follow advice given "Josh-o'-Brum." On the other hand, something may be wrong with your methods of going to work. Are your nest-pans of the right pattern (so the hens can turn the eggs properly) and properly ventilated? A room with fire in night and day must be very dry, and moisture is necessary to hatching eggs. Hens should have a bath or two towards the close of incubation, and the eggs should on the twelfth night be dipped for a few seconds in warm water. You ought to get a book on Canary breeding from this office, which gives advice on breeding. I notice there are some good hints in the "Breeding Register" CAGE BIRDS has just published. You ought to get it.

MISCELLANEOUS CANARY QUERIES.

Answered by "OLD JUDGE."

Unlimited Hemp.

D and 4th.—If you allow them an unlimited supply of hemp, they will indeed flourish for a time, but by and bye will come a time of reckoning. The effect of your *ad lib* supply of hemp will be that, sooner or later, your young birds will die off like sheep with foot-rot. Hemp seed in excess has the power of making the livers of birds fed upon it rotten. If you stop the hemp all at once, disaster will possibly occur. I therefore advise you to gradually reduce the quantity of hemp until you are only giving a small quantity about twice a week.

A Feather Plucker.

Canary plucks his feathers and then bites them. He does not sing, and yet does not appear to be moulting. Fed on Canary seed, with rape seed twice a week, and green-stuff every day.—SINGER.

Singer.—I can only conclude that your bird is troubled with insects. First of all, give your bird a good dusting with insect powder, getting it well into the feather, especially under the wings, round the root of the tail, and the neck. After the powder has been on him about a couple of hours, let him have a fly round the room, so as to remove the powder and shake himself free of the insects. If you know how to wash a bird, it would be advisable to give him a good tubbing, using Spratt's Dog Soap for the purpose. If you do this, you need not use the insect powder. After washing or dusting, place him in a clean cage. To cleanse the old one, give it a boiling in the copper on the family washing day. Let it dry, and then paint all the cracks

and crevices with carbolic acid. Continue the canary seed as before, but alternate the rape with a little inga or niga seed, that is, one day rape, the next day inga. The rape must be German summer rape. Keep on with the green food, and medicate the drinking water each morning with Parrish's Chemical Food, using just sufficient to make the water a nice rosy pink. If you follow out this treatment, I think you will stop your bird from feather plucking, and also bring him into song.

Red Feed not Needed.

Can you recommend anything for improving the colour of my birds, which are all clears, to be given during the moult? I do not wish to red-feed them, just simply to deepen the colour somewhat. They are not show birds, but I find when selling the young most people pick out the deepest coloured ones. Of course, I could introduce green blood, but do not want to do this, if avoidable.—LONG TOM.

Long Tom.—Any of the colour food merchants who advertise in our columns would doubtless supply you with a yellow-feed. Some firms, I believe, make a yellow feed, distinct from the deeper orange or red-feed. If, however, you object to giving feed of any sort, you could improve the colour of your birds by giving them daily a quantity of rich-coloured marigolds and nasturtiums. The egg-food itself will give a certain amount of colour. Then in addition to this you might place a few shreds of saffron in the drinking water daily, or a better effect may be obtained by making an infusion of saffron, and mixing a small quantity in the drinking water each morning.

Normal Temperature.

What is cousidered the normal temperature in which to keep Canaries? State the proper amount of food to be given daily, as I fear my generosity is injurious, and liable to cause rheumatism or gout in legs and feet, in which event is there any remedy?—H. L. NOVICE.

H. L. Novice.—The normal temperature in which Canaries thrive best is about 50 to 60 degrees. I have never made any attempt to allowance birds, and I think it would be a mistake to do so. Some birds, like some men, require more sustenance than others. Again, it would be very difficult to say how much food should be given, and how it should be divided. Egg food, green food, canary seed, rape, and other seeds are all eat-at-able by the birds, and the quantity of each consumed, although small, affords an example of the Scottish proverb of many a mickle makes a muckle. It is possible rheumatism or gout may come from birds eating too much, but it would be most difficult to correct. By a series of experiments it would doubtless be possible to tell exactly how much food is needful to keep life going in a Canary, but in carrying out the experiments I am afraid many a small birdie would lose his life. If birds become attacked with either rheumatism or gout the usual remedies are to give them a small sprinkling of magnesia in their food, or to render their water slightly saline every day. The legs also may be painted with mixture of iodine or Friar's Balsam.

Young still Dying.

C.G.M.—I have come to the conclusion that your feeding is too forcing, and should advise you to stop the crushed hemp seed. In place thereof mix equal parts of canary, rape, and hemp seed, and soak for twenty-four hours in cold water. Once or twice during the time change the water, stirring it well up each time, and straining off. By the soaking much acrid matter is drawn from the seed. Birds are very fond of seed prepared in this manner, and usually do exceedingly well upon it.

Why Did they Die?

Downhearted.—I really cannot say why your birds died. These misfortunes come even to the most experienced breeders. Your feeding seems all right, except that the green food should have been given daily. From the state in which you found the young birds I am inclined to think the hen has sat too closely upon them. You say nothing about a bath. Do you use one? I like to let breeding birds have the use of the bath every day. Have you read House's "Canary Manual"? I think you would find it a real help to you. It is much the best handbook for Canary breeders.

Will He Breed Again?

Bobbie.—(1) I see no reason why your cross-bred German-Cinnamon should not breed. (2) The proof of the pudding is in the eating. Breeding capability is all a matter of strength and condition. If your bird is in full song there is no reason whatever why, notwithstanding his having seen ten summers, he should not breed again. My advice is—try him.

Fertile Eggs.

G. Amplett.—I think you must have made a mistake and overlooked the first egg. I have never known a hen to lay two eggs one night, and another the following morning. Very pleased to hear that the advice given you concerning the British birds has proved successful.

A Two-Egg Hen.

R. Walker.—If the eggs are fertile there is no reason whatever why they should not hatch and grow up into strong birds. Let the hatching go on. As to how the moving will affect things one cannot say. Some hens take no notice of such things; others become so upset that they are no use again for a long time.

Canary not Singing.

C. Lee.—You must have patience. You cannot bring health and vivacity back at a moment's notice. Give your bird a little milk sop morning and night. Continue the seed as before, also the Fellowes's Syrup for another week. Then give egg food instead of the milk sop. No; don't give the honey and glycerine. To get the hen ready for breeding feed her on egg food daily, give her canary seed as a staple diet, and a little inga seed every other day. This will soon bring her into condition. You need not apologise for troubling me twice; I am only too pleased to do what I can to help you.

First Taste of Disappointment.

Hen laid only two eggs, sat well, one bird hatched, other egg clear. The mother seemed to be attentive to her duties. This morning chick dead on floor of cage. I tried to restore animation by holding it between my warm hands and breathing between the thumbs. I have noticed the chick chirruping a good deal all week and up to last night. Was it crying for food, do you think? Beak seems to have been partly pecked away by the mother. Do you think she has been vicious and killed it?—NIL DESPERANDUM.

Nil Desperandum.—I like your nom de plume, also the grit which is shown in your letter. It is no use being disheartened when trouble comes. The face that can smile in the time of adversity is the one that commands respect and admiration. It seldom happens that one solitary nestling is successfully reared. Birds always do better when there are four or five in the nest. They are incessantly calling to their parents for food, and this keeps the old birds busy. When there is only one in the nest the old birds have scarcely any work to do, the hen sits too closely on the young, and things generally go wrong. Birds do sometimes mutilate their young, but always through viciousness, but through fear and maternal anxiety. I need hardly tell you to try again, for I know you will, and I most heartily wish you success.

Cock Chases his Mate.

A Novice.—Separate the birds for a few days; let them be within call of each other, but not within sight. Feed the hen generously, giving her egg food every day, but confine the cock to a seed diet. The hen is, I should say, as much below form as the cock is above. A week's generous feeding should put her all right. Give her a little Parrish's Chemical Food in her drinking water each day, just enough to make it a rich rosy pink.

Shelless Eggs.

Hen Canary laid two eggs and not shelled them. Fed on canary seed, a bit of niga seed every other day, also egg food with a little maw seed. Last year she laid five, and four, and shelled them all right. She has built, and they seem well paired. They have plenty of grit.—HYDE PARK.

Hyde Park.—The only cause of the shelless eggs that I can think of is that your hen must have been paired before she was ready. I strongly advise you to separate the birds for a week or ten days. Let them be out of sight and out of call of each other. Feed as you are doing, with the addition of a little green food each day. Mix 30 drops of Fellow's Compound Syrup in the hen's drinking water every day. Give her a lump of cuttlefish to peck at.

Will Sparrows Rear Canaries?

(1) Have one or two hen Canaries which do not feed after about a week. Both Hedge and House Sparrows build in my garden. Would they be likely to rear young Canaries if I changed the eggs? (2) When running the cock with two hens in cages, what is the best time to reintroduce him? Or would it be better to leave the cock entirely to one hen? (3) Is it desirable to run a cock bird with a feeder, or keep her right away? Will she take young if she has only sat a week, or would you let her sit as near her full time as possible, when the young would be five or six days old?—REDSKIN.

Redskin.—(1) I have never tried rearing Canaries under House Sparrows, but I have heard of it being done, and successfully, too, by other fanciers. The dict of the Hedge Sparrow is not at all like unto that of the Canary, therefore I should not expect success in that direction, but I see no reason at all why any member of the Finch family should not rear young Canaries. Anyway, it would be a most interesting experiment to make. (2) The best time to reintroduce the cock is when the young birds are about a fortnight old, and then only do it morning and night for about half an hour. If he interferes with the young birds you must remove him as quickly as possible. If he is one of the quiet, kind sort, takes to the young and feeds them and the hen, then let him remain. Myself, I am strongly opposed to running a cock with two hens. I have reared hundreds of birds, and never ran my cocks with two hens or separated the birds from each other during the breeding season. In a state of Nature the Finches, to which family the Canaries belong, do not go in for polygamy, and in this, as in most other matters concerning birds, I like to keep as close to Nature as I possibly can. (3) What holds good with your show birds should hold good with your feeders. In the natural state the birds are not separated during the breeding season. I cannot say if a hen would feed young when she has only sat a week. It is an experiment one might try with common stock, but I should not like to risk it with valuable birds. If the mother of the young birds feeds them the first five days, and they are then given to the feeder, they should do even better than if transferred to the feeder previous to the eggs being hatched. The feeder, however, should be allowed to hatch and keep her own young for one day, or she might refuse to feed the larger birds.

Young Canaries Quarrelling.

May.—Young Canaries, like most young animals, are full of mischief, and will often peck each other. Tie several pieces of thick string on to the aviary wires; this will give them something to play with, and stop them plucking each other. If you want your birds to be healthy, let them have a little green food every day; be sure, however, that it is fresh.

Profitable Canary Breeding.

Have built an aviary in garden, in a warm corner, 6 ft. 6in. high and 3 ft. square, with wire front. (1) Am I too late to breed this season? (2) Which is the most profitable Canary to keep? (3) What should I feed them on, and what should they feed their young with? (4) How long should they be before leaving their nest to be put in nursery cage? (5) What kind of nests are suitable for them? (6) Where should I purchase my birds from?—W.W.W.

W.W.W.—It is very evident that you are, as you say, a new beginner, or you would have read the answers to your queries several times over in the many valuable articles which have appeared in CAGE BIRDS within the last few weeks. However, if you have not seen them, I will do my best to help you. I cannot answer all your questions fully in this column, because space does not permit. (1) No, you are not too late to make a start this season. Any time during May will do to put birds into an outdoor aviary. (2) It is difficult to say which is the most profitable kind of Canary to breed. Crests bring the most money when reared to a state of perfection, but you could not keep these in your aviary. Further, it would be the height of folly for you to attempt breeding valuable birds in an outdoor aviary, and it would be equally foolish for you to do such a thing, even indoors, until you have acquired a more extensive knowledge of the requirements of Canaries. (3) Your birds would need to be fed each day upon egg food and canary seed and green food, as their staple diet, giving them a little inga, maw, and hemp seed every other day, previous to pairing them, and also, for a few days after, when the hen has nested, stop the inga seed. They will feed their young upon the same food, but when there are young about I like to give soaked seed in place of the inga, maw, and hemp. This is prepared by mixing in equal quantities, canary, summer rape, and hemp seed, soaking it in cold water for 24 hours, stirring and rinsing well in fresh water, and straining off at least twice during the day; when giving the seed rinse it well in fresh water, strain off and give to the birds. (4) The young should not be taken away from their parents before they are 28 days old. (5) The white china and the terra cotta nests, which are advertised in CAGE BIRDS, are both good. I have used them, and had good results from both. (6) I cannot recommend any particular breeder or dealer. You must decide which breed of bird will suit you best. I should not advise you to purchase costly birds, but cheap ones—common Norwich or Yorkshires. Having decided which breed to keep, then look through the advertisements in CAGE BIRDS, and send to some advertiser for a pair of whatever variety you desire. In purchasing, don't forget to adopt CAGE BIRDS' deposit system, it will prevent your being fleeced should you happen to fall across a sharp. My last piece of advice is that, before you spend a penny on birds, send to our Manager for a copy of one or the other of our books—"Canary Breeding for Beginners," or House's "Canary Manual." A few pence spent in this way may possibly save you many shillings, and the lives of valuable birds. Read one of these books thoroughly. Get hold of the theory of Canary breeding ere you attempt to gain the practice.

Hen not Laying.

Hen bred last June. Paired up for three weeks; does not lay, although she carries the nesting material about, puts it in the nest, and takes it out again. She calls the cock; he feeds her. They don't fight and coition takes place. Can you tell me the reason the hen doesn't lay.—CONSTANT READER.

Constant Reader.—You say nothing at all as to how you have been feeding your birds, or the conditions under which you keep them. I should advise you to separate them for a week or ten days. Feed the hen on hard seed and green food only if she appears fat, and give her 30 drops of Fellows' Compound Syrup in her drinking water daily. If, on the other hand, she is thin and ill-nourished, then feed her generously upon egg food, and every day give her either a little inga or hemp seed in addition to the usual canary seed, and don't forget the Fellows' Compound Syrup in the drinking water. Provide her with a bath every other day, and in any case let her have a piece of cuttlefish to peck at. After the period named, let them together again, and if she still is unproductive you may conclude she is barren.

Samples of Seed.

German.—The canary and hemp seed are fairly good samples and clean, but the rape is not at all good, and I should not like to use it for valuable birds either old or young. Neither of the three are first-class. If I were in your place I should send to one or other of the firms advertising in CAGE BIRDS, and secure the best seed possible. If birds are worth keeping at all, they are worth keeping well. Years ago it was impossible to get good seed in London, and London fanciers who valued their birds used to send to Northampton or Norwich. These two places being noted centres of breeding the corn chandlers used to keep the best of food. It is impossible to grow strong, healthy youngsters, or to keep birds in good condition, on bad or inferior seed. The best is the cheapest, and only the best should be used.

What Will She Do?

(1) Will a hen that lays six eggs first round, lay the same number each time? (2) Which is the best to use—sand or sawdust—for cage bottoms—VARSITY.

Varsity.—(1) Your question most certainly is a poser. Can any man say what a lady will do under certain circumstances? They are, you know, most unconventional beings. Because your hen has laid six eggs the first round, don't expect her to repeat the order, she may only lay three in the second round, or she may go one better and total seven. You will see we have some corespondence on the subject this week. (2) Sand, without a doubt. I should never use sawdust, except in the case of hens with nesting diarrhœa. Many a young bird is killed by sawdust getting mixed with its food.

Young Birds Dying.

Pensal.—It is very difficult indeed to say why birds die. Do you soak the bread before mixing the egg food? All bread should be soaked in cold water for at least ten minutes, then squeezed dry and mixed with the egg. The chemicals in the bread are not beneficial to the young birds, and the object of the soaking is to draw them out. Do you provide the old birds with plenty of sand? Try the effect of mixing just a pinch of salt in the egg food.

BRITISH BIRDS, MULES AND HYBRIDS.

Answered by G. E. WESTON.

Softbill Food.

A.W.—This sample is not, strictly speaking, a Softbill food, using that term to mean a food designed for use with all insectivorous birds. It is simply "German paste," and a good sample, too. It is useful to give occasionally to Larks, Pipits, Blackbirds, Thrushes, and the coarser feeding Softbills. I cannot say exactly of what it is composed, the baking or frying in fat or oil which it has undergone having changed some of the ingredients beyond recognition. The chief ingredient, however, is coarse pea meal. With it there are coarse oatmeal, brown sugar, maw, and white and red millet seeds, and probably crushed canary and hemp seeds. I use a little good "German paste" now and again, and with benefit.

Concerning an Aviary.

Hoppy.—Your indoor aviary, 7 ft. by 4 ft. by 4 ft., would hold about 18 small birds very comfortably. You could get a nice and varied collection by including a few suitable Foreign seed-eaters (as you suggest) among the Britishers. For information on Foreign birds, however, you must address a query to our Mr. Page, who attends to that department. The following British birds should get along nicely with them:—Goldfinch, Bullfinch, Linnet, Twite, Lesser Redpoll, Mealy Redpoll, Siskin, and Reed and Cirl Buntings. A Greenfinch and a Yellowhammer might do no harm, but would need to be watched and removed at once should they attempt it. One Chaffinch might also agree, but this species and the Bramblefinch are very unreliable. A box or privet shrub is very suitable to put in a small aviary, but needs frequent changing (or cleansing), as the birds soon render it unsightly. You would need to put in canary, millet, summer rape, teazle, and hemp seeds in separate dishes, and throw in a good handful of sunflower seed daily; also give the other seeds used by birdkeepers (including wild seed mixture) occasionally as a treat.

Nests and Seeds.

Knapley.—Why not go out and get a nest of the Greenfinch and Yellowhammer? They are plentiful enough in your neighbourhood, and easily found. Then you could see exactly of what they are composed. The Greenfinch uses small twigs, bents, and coarse grasses as a foundation, and makes it cosy with hair. The Yellowhammer does exactly the same, only she uses grasses to a greater extent, and usually pops a few feathers among the lining. The seed sample you enclose looks exactly like the one I commented on in last week's issue, under the initials, "A.E.C." Is this not so? It is comprised almost entirely of what are known as "bird rapes," and is suitable for the same birds as mentioned last week.

More Aviary Matters.

Bird Lover.—I should think you could quite successfully keep Yellowhammers, Linnets, Greenfinches, Wagtails, and Blue Tits (12 birds in all) in your aviary 17 ft. by 4 ft. by 5½ ft., half closed in, and with a small stream running down the middle. Whether they would all breed or not, no one could say; at any rate, you have a sporting chance. Probably not more than one pair of Blue Tits would agree together; the same remark applies to the Wagtails. In fact, it would be far better to have only one pair of each species present. I should not put a pair of Peewits along with them; try a pair of common Sandpipers instead. You must not remove the cock birds when the hens have gone to nest (if they do). You would simply upset everything by trying to do so. The outside compartment must be well fitted up with dead shrubs and bushes, branches, hurdles of pea-sticks, and the like, and possess plenty of perching accommodation, just the same as the covered-in compartment. You will have to arrange for supplies of live food for the Wagtails and Tits—the contents of ants' nests thrown on the aviary floor would suit them admirably. Probably you know that the Tits will be likely to prefer some sort of hole in which to build, and the Wagtails a depression in the soil under a sheltering boulder. Make a little fancy rockery, with grotto, etc., in the place; it would look very nice.

Nightingale and Woodlark.

Thankful.—The only way to make absolutely sure of getting songsters, either in Nightingales or Woodlarks, is to buy those who are on song at the time they are purchased. Everybody has to take his chance when buying fresh-caught specimens. It is impossible for any beginner to sex either of these birds with accuracy—both cock and hen are almost as like as two peas. An experienced dealer or fancier can pick out the sexes, though, with fair certainty. Your only chance, therefore, is to go to a reputable dealer, and trust in his word. You want, if possible, to get hold of a "kind" (steady) bird, which does not dash madly about his cage without cause. Nightingales need not have perches covered with either cloth or baize. I do not cover my own perches. Make them of a soft wood, and not too large—half inch to five-eighths wide. The same stock mixture as that recommended for a Nightingale last week will answer admirably for a Woodlark; prepare it in the same fashion. A Woodlark, of course, is not a fruit-eater like the 'Gale, but needs a supply of seed, like a Skylark, also a dust bath.

Some Brevities.

Goldie Not Ready (Long Tom).—I take it your surmise that the weather conditions are responsible for your Goldfinch's seeming unreadiness for breeding is correct. No doubt, after a week or two's real summer weather, he will be quite as anxious as you say the hen Canary is. You can only wait patiently. Give the hen plain food only. Let the Goldie have plenty of dandelion, both seeding and flowering heads, and young, tender leaves. Your other treatment is quite correct. Keep the slide between them.

A Hawfinch and an Unknown (Constant Reader).—I don't think it is at all necessary to colour-feed a Hawfinch which is a good colour naturally. Give it plenty of black, privet, mountain ash, etc., berries through the moult. I am aware that the last Crystal Palace winning Hawfinch was very hotly colour-fed, but that does not affect my answer. The birds you see flying about the stone walls are, I should think, hen Redstarts. Stonechats are considerably smaller than Wheatears, and the cock has a conspicuous black head. Your descriptions are too vague to be helpful. I do not know of any small British bird which is very light blue in colour. A Nuthatch, seen from above, might look so, but he is not likely to be popping in and out of stone walls. I should think the birds were Great Tits, or else Blue Tits—I take it you would know these birds, however, when you saw them.

Value of Hybrid (M. Thomas).—It is really impossible to attempt to value any Hybrid without seeing it. Could you not get some competent local fancier to call and look at it? It might be a hen for all I know, and a hen Goldfinch-Greenfinch Hybrid is worth practically nothing. If a cock, and of nice size, shape, and colour, you may get 15/- to 20/- for it. If a real first-class specimen, fit for keen competition, 30/- to 40/-.

Two Greenfinch Pairs (Amateur).—A cage 30 in. by 15 by 15 is of very nice size for a Hybrid couple, and the cock Greenfinch and hen Bullfinch should get along nicely therein. The all-wire cage, 36 by 36 by 20 inches, would answer for a couple if covered over with cardboard or brown paper, so that only the front remains open. It may be well, too, to screen off the corners where you hang the nesting receptacles. The cock Greenie and hen Canary should manage nicely in the 24 in. breeder. It is a sign that he feels comfortable and at home, I take it, when a cock Greenfinch raises the feathers on his poll like a crest on being looked at. Certainly it is a sign of good, and not ill, omen. It is full early yet, considering the unfavourable weather, for mating couples to be breeding.

Early Troubles (G.B.A.).—If you changed your birds from a warm to a cold room, that is the cause of your trouble. Readers are practically always being warned not to do this. Nothing is more calculated to upset birds. The German hen which has gone into moult will do no good until the has got over it, and had a rest afterwards. She may perhaps be spoiled for the rest of this season. Evidently the Yorkshire hen is out of condition. You want to feed her up well until she commences to carry nesting stuff about in her mouth; then she will go ahead all right. You are probably also a week or two too early for the Linnets. Wait until we have had a week or two of sunny weather, then pair them up, feeding in the meantime on dandelion, and plenty of seeding shepherd's purse. No one could tell the age of your Yorks. hen without seeing her; then one could perhaps only guess at it.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S., M.B.N.H.S.

What Bird?

Miss Fowler.—I did not think of looking among British birds for a solution, and I could not find any Foreign species I knew of to fit your description. Mr. Weston, our British bird expert, suggests that it is a Bramblefinch, and on comparison I am convinced he is right. It would thrive on the ordinary British bird mixture. If you require further help re this bird, repeat query next week to Mr. G. E. Weston.

Food for Port Lincoln Parrakeet.

I have lately purchased one of these birds; what is their food and treatment?—L.R.T.

L.R.T.—My birds of this and allied genera get a hopper of canary and millet in equal parts and

another of oats, wheat, dari, hemp, and sunflower seeds; two parts of oats and one part each of the other items; green food, ripe fruit (apple, pear, or orange they seem to prefer). Cuttlefish bone and parrot grit are essentials, and if the birds approve of it, rock salt is wholesome also. It is advisable at present to use slightly chilled water for its bath; sods of grass in flower would be very wholesome. Slightly colour its water with Parrish's Chemical Food, and supply plenty of cuttlefish; this should counteract the looseness. Do not give maw seed, and dry Osborne Biscuit would be preferable to sponge cake. If it has a special liking for crushed Indian corn, by all means put a little in above mixture. It is best to cover these birds up at night, but while the cage is covered up all round the sides the top should be left open for ventilation.

Ribbon Finches not Rearing Young.

(1) My birds lay and incubate, but throw out their young when about four days old. What can I do to remedy this? (2) Zebra Finches are sitting in double breeding cage. How must I feed and treat? (3) Can I put my Budgerigars outside early in May?—FOREIGN NOVICE.

Foreign Novice.—(1) Ribbon Finches are sometimes given to this annoying habit of throwing out their young; but I think in your case they will settle down a little later; they are not yet accustomed to their quarters. They will do better in the aviary. I have had numbers of these birds reared on dried ants' eggs alone, which this species appears to be very fond of for rearing their young. As well as keeping them well supplied with dry ants' eggs, canary and millet seed, I always kept a little soft food in the aviary (a roomy one), which contained a mixed series of Finches, and they always reared their young without difficulty. In fact, on one occasion, when the cock died suddenly in a fit, the hen brought up a fine brood of three herself. (2) Leave the Zebra Finches to themselves, do not meddle with them, and supply the same food as to the Ribbon Finches, only, I think, you will find these will not eat many ants' eggs, but they will eat the soft food mixture (game meals, ants' eggs, dried flies, and crumbled sponge cake in equal parts and made crumbly moist for use) readily, also tufts of grass in flower are early picked over; I think you would find the Ribbon Finches would eat the latter. (3) Yes, you can turn your Budgerigars out of doors next week. Fix up under the roof at least double the number of husks you have pairs of birds.

Home of the Red-Vented Bulbul.

G. Bonham.—The Red-vented Bulbul (*Pycnonotus hæmorrhous*), also known as the Common or Madras Red-vented Bulbul. It ranges from Ceylon northwards to Central India, and on the western side as far north as Sindh. Although a bird of the plains, it is occasionally found at considerable elevations. It should have as much ripe fruit as it will eat, live insects, and some good soft food mixture. Some individuals are very spiteful in a mixed series, and it should be trusted with small birds only with the strictest oversight till its demeanour is ascertained.

Grey Singing Finch not Singing.

(1) I bought the bird as a singer in October last, but it has never attempted to sing. Please advise me what to do. I only want it as a songster. (2) Can I keep a Red-headed Gouldian that has been flying in a bird room in my Crystal Palace cage? (3) Some of the birds are moulting. Do they require special treatment?—E.H.S.

E.H.S.—Watch your bird carefully, and if it is a male, there should be a small patch of white on the throat; this is only clearly visible when the bird is singing, or when the neck is elongated, by the bird stretching or some such movement. These birds are so full of song that it should have done so by this time. If it does not sing, say, by the middle of June, I should say you have a hen bird. I may say, however, that apart from actually hearing the bird sing, it is very easy for an expert to make an error in sexing these birds. Re the Gouldian, these birds do not take kindly to confined quarters, but with your temperature, if there is thorough ventilation as well it should do well. My difficulty is you do not give size of cage. It would do with the birds you name providing they are not overcrowded. As to moulting, if the birds appear lively and healthy, let well alone, but keep up a good supply of cuttlefish and fresh clean green food. If they appear out of sorts, for one day make their drinking water just saline with Epsom salts, and follow this by just colouring the drinking water with Parrish's Chemical Food. It would be better to procure a mate for the Gouldian, and leave them in the bird room together; they would then probably breed.

Parrakeet for Mixed Series.

In my outdoor aviary I have Cockatiels, Cardinals, Popes, and mixed Finches (all males). What species of richly coloured Parrakeets would agree with them in outdoor aviary? I have a leaning towards Pennants.—TOM COMPTON.

Tom Compton.—I am rather doubtful as to Pennants. Some individuals are very pugnacious during the breeding season unless they have plenty of room, and are certainly unsafe company for Rosellas. Why not have Red Rosellas? Once these are fully mature, they are certainly handsome and showy birds, and would agree with the birds you name. I must add this proviso, that the above is based on the supposition that your birds are not crowded. In a roomy outdoor aviary I have kept Red Rosellas with Finches and small Waxbills, as well as those on your list. Pennants are very richly coloured birds, but are not safe company during the breeding season for nearly allied species fully their own size. An odd male might be fairly safe, for individuals in every species differ materially in disposition, but you must keep careful observation at first till this is ascertained.

Six Queries.

(1) Can Budgerigars (possibly newly imported) be put out of doors at once? (2) What other inexpensive Parrakeets and Lovebirds can I put with them? (3) The aviary is 10 ft. long by 6 ft. wide; how many will it accommodate? (4) Which are the most easy to breed, aviary bred or imported birds? (5) Is it harmful to keep young in with old? (6) Can strong-billed birds, such as Java Sparrows, Hawfinches, and Chaffinches, be kept with them?—TIMBROKROPI.

Timbrokropi.—(1) Yes, providing your aviary has a shelter and is well provided with husks; some branches should be fixed horizontally under the roof, close against it. (2) Cockatiels (10/6), Rosellas (25/-), Madagascar Lovebirds (3/6), all per pair. (3) One pair each of Cockatiels, Rosellas, and Lovebirds, and two pairs Budgerigars for breeding purposes. It would have been much better had your aviary been half as high again. (4) Aviary bred birds would settle down most readily to nesting, but the imported birds should soon do so; it all depends on their condition when they come into your possession. (5) You can keep old and young together, but you should dispose of your young birds, when they are able to look after themselves, or your accommodation would soon be overcrowded. (6) Yes, though there is the probability of a tragedy occasionally. Budgerigar play is rather rough on Finches. However, such mishaps should not be frequent. With such a mixture I should only advise you to put in male Finches.

Moustache Parrakeet.

Please give habits and treatment. Is it hardy and sociable with other birds? Is it likely to breed in confinement?—J. H. WOODWARD.

J. H. Woodward.—The Moustache Parrakeet requires the same treatment as the Ringnecks; once over the hardships of the journey to this country, they are hardy and enduring, and may be kept out of doors all the year round in any aviary which provides space for flight. In such an enclosure they may be kept with Cockatiels, Rosellas, and other Parrakeets of similar size, but they must not be crowded. When adult there is no reason why they should not settle down and breed. You must either hang up longitudinally a small barrel, or supply a nest box of suitable size with a concave bottom. They require no nesting material. You will find the data given in "Popular Parrakeets" for the Ring-necked Parrakeet very helpful, as the habits and disposition of the two species are very similar. If you have young birds it will probably be quite two years before they attempt to nest.

Birds and Cages.

(1) The roof of our house is roomy and well lighted, and I can enclose a piece 10 ft. by 8 ft.; will this do for a Foreign bird room? (2) Will it be too late in three weeks' time to purchase Budgerigars for breeding? (3) What other Foreigners can I breed in cages? (4) What size and kind of cages do you advise for Budgerigars? (5) How many Foreigners can I keep in Crystal Palace cage 3½ ft. by 2 ft. by 3½ ft. high?—QUERIST.

Querist.—(1) Yes, choose the portion that will give most light, sun, and air without draught. Make the space as large as you can while you are about it, as space plays a very important part in the health of captive birds. (2) If you procure birds from some good breeder (see advertisement columns), they should settle down to breeding almost at once. It is best to get two pairs, each pair from a different source, then the resulting young of the respective pairs could be mated without deterioration of stock. In preference to cages, I should advise the making of a large flight for these birds along one side of the room; several pairs will breed together, and with much more freedom than in cages. (3) Zebra, Ribbon, Ruficauda, and Gouldian Finches, etc.; also Java Sparrows and Bengalese; these two make good subjects for cages. Diamond Finches, Silverbills, Spicebirds, Grey and Green Singing Finches, Bronze and other Mannikins. (4) Do not try to crowd the largest number of cages you can into your room. It is better to have half the number of birds doing well than a larger number overcrowded and always more or less out of condition. Have good box type cages made 2½ ft. to 3 ft. long, 1½ ft. deep, and 2 ft. high; well furnish these with branches (these are better than stiff perches), nest boxes, etc., and your birds should do well. (5) These are most unsuitable for attempting to breed birds in, but if you keep it in some position where a draught cannot blow through it, a dozen and a half of small Waxbills would make a pretty picture; these small birds are very beautiful and easy to keep; they seldom attempt to breed, would succeed well in your cage. A good selection would be:—Pairs each of Golden-breasted, Grey, Orange-cheeked, and St. Helena Waxbills, and Common and Green Avadavats. This cage would not be a success out of doors.

Sulphur-crested Cockatoo in Awful Condition.

Last July I brought over from Australia two of these birds; one has been in my own care, and, thanks to your paper, is in the pink of condition; the other a friend has been caring for and has given it a bit of everything, bread and milk, and, in fact, anything it liked to eat; as the result, it is in a most awful condition as to plumage, and also has a diseased beak; the top portion seems to rot away. In spite of this it is fat and plump. Can anything be done?—J. H. LLOYD.

J. H. Lloyd.—I am rather at a loss how to advise you in such a case. It is the awful diet that has wrought the mischief. As to whether the case is hopeless is a very difficult query to answer. For myself, I never recognise that alternative with my birds, and in consequence have saved many apparently hopeless cases that have come into my hands. Its present diet must be stopped at once, and it must have the same diet that the bird in your own charge is getting, with this addition, that it must have boiled maize (this only keeps fresh one day) daily, while its upper mandible is in this state. If it will not, or cannot eat sufficient of such dietary, nothing can be done for it, for it will only get worse on its present awful menu; in fact, it is cruelty to continue same. The diseased beak must be cleansed frequently. Use a weak carbolic solution for this purpose, but exercise care that none of it is swallowed. If there is any wound, after the cleansing lightly anoint it with spermaceti ointment. Make its drinking water quite saline with Epsom salts for one day, and repeat same in a week's time; and for some weeks, on such days as you are not giving the aperient, well colour its drinking water with Parrish's Chemical Food, and also drop about ten drops of same daily on to its boiled maize. As you remark, the bird is in an "awful state," yet I am hopeful it will gradually improve, but complete recovery will be a matter of some time. As to whether it will be left a confirmed feather puller and eater, time only can determine. Use only a glass drinking vessel while giving drugs. You had better report progress in two or three weeks' time.

A Feather Eater.

My Grey, apparently in good health, for the past year has been addicted to eating her feathers. She looks very shabby. What can I do for her?—NEW READER.

New Reader.—Feather eating, once acquired, is almost incurable, and mostly arises from feeding a bird on a bit of everything. You had better try all possible remedies. Get a light zinc collar, made to fit the bird's neck, from which a short piece of chain hangs over the bird's breast; this comes in the way of the bird's beak when it attempts to get at its plumage, and it is supposed to play with the chain instead. Any metal cage maker will make one to order. Also soak, every other day, the parts it is in the habit of pulling and pecking at with quassia solution, keeping it out of all draught till dry. This treatment will have to be persevered with, as it is a work of much patience curing a bird of this annoying and depraved habit. It is mostly brought about by improper diet, and you do not state what yours is; however, if you look through last week's query column and also this, you will not be in doubt as to the correct diet; treat your bird accordingly. You had better give it a cooling aperient once a week, say, for a month; one teaspoonful of Dinneford's magnesia in its drinking water; and on other days during the same period well colour its drinking water with Parrish's Chemical Food. Watch this column closely and you will get many hints as to treating Grey Parrots.

Songless Pekin Robins.

Last October I bought three of these birds, which, I was told, were splendid songsters. Up to now I have heard nothing that can confirm this, their utterance being very meagre. Yet they are in good health, and I am of the opinion that they are males. Have I been rightly informed as to song?—STEPHEN SMITH.

Stephen Smith.—The power of song with these birds is very variable, but all true males must be classed as fair songsters, while a good one is very fine and has good power and variety in its song. The greater part of the birds brought over are females, and most of them young birds. It is never easy to sex these birds, and I expect dealers make many mistakes, as I have myself, in picking out the sexes from a lot of birds of varying ages. The adult male has the edges of the wing feathers richer in colour than the female, also the same as to the yellow of the throat and breast, and in the male the eye region is yellow, while it is greyish-white in the female; his bill also is a deeper coral red than that of his mate. The song of a good singer is very buoyant and joyous and continued for quite long intervals together, and is very varied. Diet:—As staple food, give some good soft food mixture (see advertisement columns), or mix crushed Osborne biscuits, sponge cake, dried flies, and best ants' cocoons, in equal parts; well mix and make crumbly moist for use. Give in addition as much ripe fruit as they will eat, and a few live insects, mealworms, etc., daily.

Young Grey Parrot.

Please instruct me how to treat. What is its food? Should its drink be given warm or cold? Does it need sop? How must I treat if it gets diarrhœa through change of diet and climate?—H.R.

H.R.—A young Grey Parrot must be kept warm and free from draught for some little time at first, later the temperature of an ordinary living room will suffice. It will be necessary to give the bird boiled maize (this only keeps fresh one day) for a time, but you must also keep a supply of the following mixture:—Canary, dari, wheat, hemp, oats, and sunflower seeds, in equal parts, in its cage; and when you find it eating this heartily gradually wean it from the boiled maize. As regards water, let it satisfy its thirst three times a day with water that has been slightly coloured with Parrish's Chemical Food. No, it does not need sop, and do not give it table scraps of any kind, tea, coffee, or milk sops, or any kind of animal food whatever, or you will soon ruin the bird's health. Give it ripe fruit, green food, nuts, plain biscuits (dry), boiled potato (dry), raw carrot, grit, cuttlefish, and water as above. In case of diarrhœa give three drops of pure salad oil direct to the mouth, and for one day only put two drops of laudanum and a little prepared chalk into its drinking water. In giving the latter, it is best to take the water away for a time, and offer it, say, three times during the day, well stirring it before offering it to the bird, and let it satisfy its thirst on each occasion. Follow this by a course of Parrish's Chemical Food, and keep the bird warm till recovery is complete.

Twenty-eight Parrakeet.

(1) What is the correct diet and treatment? (2) Its droppings are loose, he is beginning to moult, but otherwise appears well. (3) Should it not have larger flint grit than that given to Canaries? (4) Should he have a bath?—J.M.T.

J.M.T.—(1) The Twenty-eight or Yellow-collared Parrakeet is a frugal liver. It should have one hopper of canary and millet, and another of wheat, oats, dari, and sunflower seeds, ripe fruit, green food, grit, cuttlefish, and water ad lib. You must keep a watch upon it, and if it does not crack the seed readily, or appears to only partake of same sparingly, you must give boiled maize (this only keeps fresh one day) for a time, but when you notice it eating the dry mixture freely, gradually wean it from the boiled maize. (2) Supply it with plenty of cuttlefish and colour its water with Parrish's Chemical Food, and this should soon disappear. (3) Supply Parrot grit; this is put up by several of our large advertisers. (4) Yes, but many Parrots will not bathe. Such have to be lightly sprayed, and special care should be taken (at all seasons) to keep them free from draught till dry. The critical period with these birds is their first few months in this country; they should be kept in a warm but not stuffy corner of the room and carefully guarded against draught, but not shut off from fresh air. At this season the temperature of an ordinary living room will be ample, but, like all caged birds, they must not be stood in a draught, or they will soon go off.

Sunflower Seed for Grey Parrots.

Thanks to your help my Grey is improving daily. I have tried all the seeds you name, and it will eat only the sunflower seed. Can she have this as her sole diet, apart from fruit, nuts, etc.?—E.M.L.B.

E.M.L.B.—Glad to note your bird is improving. Sunflower seed alone would not be a wholesome diet for a Grey Parrot. Give the bird an ordinary hopperful of the mixture as already advised, but you can leave out the canary if it objects to small seeds, and give it no more for that day. Of course, you will continue to give nuts, fruit, etc. By this means you will force it to take some of the other seeds; it is not likely to starve while there is food in its tin. It is a good thing it will not take sop; never give it. Even if it occasions a little waste I should persevere as above; ultimately it will take the more varied diet it needs.

PARK & LAKE AVICULTURE.

Answered by FRANK FINN, B.A., F.Z.S., M.B.O.U., etc.

Rearing Golden Pheasants.

Regular Reader.—Young Golden Pheasants should be fed at first on a mixture of egg, hard-boiled and finely minced (or, better, pressed through perforated zinc), crumbled biscuit or stale bread crumbs, mixed green food (preferably spring onions, tops and all), and dried ants' eggs and dried flies. Give also canary and millet seed, and well-scoured gentles if you can get them. Keep up this feeding for the first week or two; then, if you find it too expensive, substitute chopped cooked meat for the egg, or mix with boiled cressel; but always try and supply all the insects, fresh or dried, you can, and give green food constantly. As the birds get bigger, give larger grain, and ultimately you will be able to keep them almost entirely on this; but green food and some animal food should always be supplied. Take care your chicks are kept safe from damp; if they are in a confined room, frequently renew the sand or earth on the floor, and see that they have grit, and clean water. If you can arrange for them to run outside and pick grass and catch insects, it will be all the better. You can do this with a movable wire run. They fledge quickly, and when as big as Thrushes should have a wing cut if allowed to run out. When fully grown the cocks will be seen to have a red flush on the head and back (though they will not come in colour till next year), and then the sexes should be separated. You will see that the management is practically the same as that of chickens, except that the little Pheasants require better food.

Zebra Doves.

E.F.E.—You are doing right in feeding Zebra Doves on canary, hemp, and millet; the yellow-looking seed smaller than millet, sent with them, is a variety of that seed. Let them have a turf to pick at if they will, and supply some crushed cuttlefish bone mixed with a little salt. They are not free breeders, and if you want to breed them in a cage 3 ft. square, you must not have more than a pair in it. They are hardy if in a sheltered aviary, but I don't think you could winter them outside in a cage.

POST MORTEMS.

Mr. J. North, 435, Oxford Road, Reading, will examine cage birds for a fee of 1s. 6d. each bird; for a reply direct, 2s. 6d.; analysis, 21s. Subjects for post-mortem examination must be sent packed in a box direct to J. North, with fee. Any sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.

Cockateel (B. Waugh).—Softening of liver, indigestion and apoplexy. It was a male bird.

Canary (A. W. Seal).—This bird, and probably the other twelve which you have lost, died of bird fever.

Cordon Bleu (L. M. Payne).—Softening of liver, then inflammation of that organ and also of the lungs. "Severe chill" caused death of this bird.

GENERAL.

Answered by the EDITOR.

J. W. Kingsmill.—Many thanks for cutting, which we have used.

J. Knowles.—Thanks for list. Your bird is indeed a most clever linguist.

F. Howes.—Many thanks for your kind note, which we much appreciate.

G. Dowden.—We have forwarded letter as requested.

Rev. D. P. Harrison.—Thanks for yours; the notes are most interesting, and we shall have much pleasure in publishing them.

H. K. Luce.—Have you not made a mistake? Your birds are evidently two hens. Doves only lay two eggs.

Where is that Cutting? (A. E. Wasley).—When your letter was opened the sub-editor began to sing. But, alas, no cutting was enclosed. You have quite roused our curiosity.

Thos. Smith.—Many thanks for your genial note and kind assistance. It is to help our societies that the Canary Breeding Competition has been promoted, and we are glad to know our anticipations are being realised.

Canary Rings (J. Brodie-Mills).—You will find these advertised in our prepaid columns. There are several different makes, some breeders preferring one pattern, some another. It is all a matter of choice.

Anxious to Know.—When mutual exchange takes place, the birds or articles should be dispatched by each of the parties on the same day, or if not at times to be mutually agreed. There should be no question as to who should send first.

Nest Lining (R. Robinson).—Many thanks for sending outline of nest lining. You fail, however, to give an explanatory note concerning it, and therefore we cannot understand how it fits. What is the tongue, and what part does it play?

Keystone of C.B.U. ("Gravity Grenade").—Such a letter as yours, appearing over a "nom de plume," would only, we fear, tend to cement, or, at the least, aggravate, any feeling of ill will existing between two clubs, each of which has claims upon our consideration.

Too Many Deposit Letters (J. Garland).—All in the day's work, my friend! We don't mind the grey hairs coming for, bless you, we shall soon be without any at all! Glad to hear you had such a fine sale. We have returned all further deposits as requested. Success be your portion always.

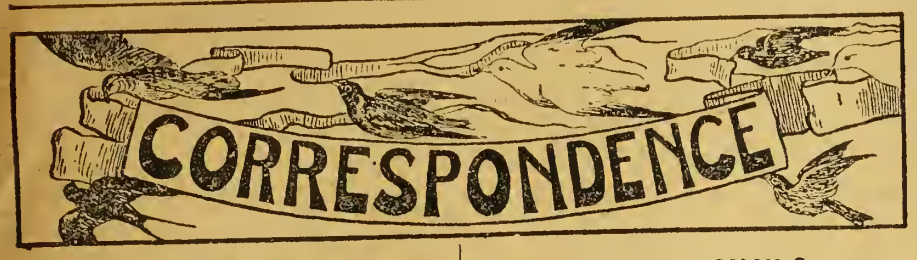
B. C. Briars.—Most certainly we shall provide covers for the binding of the "Bird World Magazine," and hope to announce price of same shortly. We are glad to know that the "Bird World" gives you so much pleasure, and that you approve of the enlargement. If it has pleased you in the past, it will certainly do so in the future.

Gateshead and the C.B.U. (G. W. MacPartling).—My good friend, you raise in your letter on this point issues which I fear more nearly concern me than they do you and such a document requires greater consideration than I can give it in the time you have allowed me. I don't feel at all disposed to allow you to resuscitate the skeletons of buried grievances.

Palace Prize Money (E. G. Wright).—Your letter arrived too late for me to deal with this week. I shall hope to traverse your various arguments later. But just let me say at this juncture that I have very little disposition to engage in a wordy warfare with you about such a trifling matter, though I don't at all object to giving you the cheap notoriety you apparently are seeking.

Dead Linnet (Anxious).—Phew! our olfactory nerves are fairly tough, but the carcase of your bird, like Macbeth's sin, was "rank and smelt to heaven." Why will readers persist in sending dead bodies of their pets to this office instead of to our post-mortem expert, Mr. North? Rules would seem to be made to be broken. Remember, oh "anxious" one, that our Thomas Cat has fled the office. We fed him regularly upon such provender as yours, but the last corpse he tackled was too much for him. It was a case of Quoth the Raven!

Palace Prize Money (Fair Play).—While feeling grateful to you for your sentiments on this matter we should like everyone, including yourself, to clearly understand that we have not the slightest animosity to Mr. Wright on account of his action over the Palace prize money. We deplore his crass-headed attitude and cannot admit his claim or his pretensions to castigate us, but beyond that we do not go. We certainly cannot allow any such charges to be made against him as your letter might be taken to cover. Thanks for your sympathy, though.



CHAMPION LAYERS.

SIR,—I wonder how the following advertisement would take, viz., Sittings of eggs supplied from a good laying strain of Canaries at 10s. 6d. per sitting. I have a young hen that laid six in her first nest, four of them hatching and now on the perch. The hen having gone to nest again, has just completed her second hatch of seven eggs. This creates a record for me, as I have had several hens lay six, but never seven, although I have read of such. In fact, you recorded one of eight last year, did you not? The fact of mine laying thirteen in two consecutive nests must he very near a record.

E. C. COX.

SIR,—I never had a bird in my life, till I had a pair of Canaries given me. Last year they had four nests of eggs. I had 19 eggs altogether, 16 hatched, seven have lived, good strong birds, nine died, five from poison through my own carelessness. This year I have had five in the first nest, four. thoroughly strong, one died. Now I have seven eggs in the nest. Is this not an unusual number? I always have the cage in front of the kitchen window, on the table, and a bath on table all day for them. The hen bathes two or three times a day. I hope this will be an encouragement for someone.

M. VINCENT.

AN APPEAL TO THE CHARITABLE.

SIR,—I have received the following donations in response to my appeal on behalf of the family of the late Mr. W. Orme:—North London C.B.S., £1 1s.; Mr. R. P. Harper, 2s. 6d.; Mr. J. W. Reunie, 2s. 6d.; Mr. Morgan, 2s. 6d.; Mr W. Morris, 2s. 6d.; Mr. G. Dunford, 5s.

R. J. PRETTY.

CANARIES KEPT OUT OF DOORS.

SIR,—I have a good number of young Canaries in my open outdoor aviary. I have not lost any yet, although the weather has been very cold. I bred about 50 outside last year, I left about 30 out all through the winter, and they all kept in splendid condition. I am only a novice at the game. I carefully read up CAGE BIRDS, and then use my own judgment. I find Canaries want plenty of hemp out of doors. I give mine one-third. Several old fanciers have told me I have the best lot they have ever seen outside. Thanks to CAGE BIRDS for the many hints I have received.

W. H. SALISBURY.

A HAPPY ENDING TO AN UNFORTUNATE ESCAPE.

SIR,—Being a weekly reader of CAGE BIRDS, and seeing many items of interest to readers therein, I should like to tell the readers of an incident that happened on Saturday last, May 4th. On arriving home from business I saw my wife at the end of the garden, looking at the house-tops. I enquired what was the matter, and she replied that one of my Goldfinches had got out of its cage, and there was the little chap on the house-top singing merrily. He flew about from house to house, and then we lost sight of him for over an hour. I again saw him in a garden about four houses away from my own and I got to within a yard of him, but he again flew on to the house-top, and so he kept on flying within 50 yards of my house. All at once he settled on the gutter spout of my house and in a few minutes he flew on to the washhouse; he again flew on to the house-top some yards away. I then put my Goldfinch Mule (in cage) on the washhouse, and left it there while I had tea. He then flew on to the cage and flew away again. I then put his empty cage at the side of the mule, but again he came and went. He made another visit, and settled on the empty cage and tried to get to his seed, but could not. Eventually he hopped into the cage and I closed the door with a hroom, and Goldie was safe. Do you consider me lucky, or had the hird instinct which led him to go into the cage? The time he got out of the cage was 12.45, and the time when I caught him was three minutes past six. So you see he had over five hours' freedom. I had taken great pains to get him into condition for Mule hreeding, and he was singing within three minutes of the time he entered the cage. I should have been very sorry to have lost him, as only three weeks ago I was offered £1 for him. I have been congratulated by my neighhours as a very lucky fellow. Hoping it will interest your readers. I thank all who answered my advertisement last week re Gollfinch Mules.

F. MELTON.

SHOW POINTS OF THE LINNET.

SIR,—I notice some correspondence re show points of the Linnet, and my name quoted. I lectured on the Linnet at M.N.C.O.S. some years ago—the lecture was published in "Fur and Feather." If correspondents quote my version of a show Linnet—they should quote all I then said of the points of a show specimen—and not a few words only. It would clear hoth Mr. F. King's and Mr. Marwood's opinions on certain points, both of whom touch upon good points but do not traverse the whole.

CHAS. HOULTON.

HOW TO MAKE LIGHT BUNS.

By using Eiffel Tower Bun Flour the most inexperienced person can make *light* Buns and Cakes with certain success. Try a 1d. packet. Save Eiffel Tower Labels for 10/6 picture free.

IS IT A QUAIL?

SIR,—Would some of your readers kindly give me the description of an English Quail, as I hclieve I have one, which reached me by rather a cruel messenger (my neighhour's cat), on April 20th. When my wife took it away from the cat it was badly mauled about and bleeding from the mouth, hut with care it has now thoroughly recovered, and has taken kindly to cage life. I have shown it to some of the oldest inhahitants, and they all say that they have never seen a bird like it. I saw a bird in the museum at Maidstone, labelled Common Quail, which is similar to mine, but my bird has much prettier markings, also the lacing on the hack is much larger; mine has also two black stripes under the throat. The shape is similar to the Partridge, only smaller, beak slightly curved, head rather snakey appearance, legs flesh colour. I feed on mixed corn, with a little hemp and canary seed thrown in. Would this bird be allowed to compete in British bird classes if shown?

EDWARD JENNER.

THE LANCASHIRE CANARY.

SIR,—It gave me much pleasure to read Mr. House's lecture on the Lancashire Canary, and I must say it is a champion lecture. What he does not know about a Lancashire is not worth learning. It is quite right what he says ahout the new standard, as he went through it from start to finish, when it was formed. He is also correct in what he says ahout putting Yorkshires into the Lancashircs. I have never seen it done in any room, but I have seen plenty of Cresthreds used. I don't like a Lancashire that is bred from Crests. There is something ahout the Lancashires of to-day that is not right; they are too sluggish, too near the perch, and many of them are too loose in feather, not well wrapped up as they should he, like we used to see them years ago. Mr. House says we never had such birds before. He is right, we never had them so heavy, and I think the time is coming when they will be hetter. There are a lot of fanciers at the present time trying to get away from the Crest. I think his description of a Lancashire is truly grand; he says the coppy should lay very close and flat, and dip at the edge. Some would-he judges say it should spread. I don't think so. Mr. House is quite right; the head should stand well away from shoulders, with a good thick neck. I agree with all he says, hoth about the coppy and plainhead. I was very much amused last week on showing a well-known judge a coloured plate to see him measure the head hy placing a match across it, from the beak to the back of the skull. He asked me why a coppy should he longer than a plainhead? We found the drawing of the coppy a good quarter of an inch longer than the plainhead. Should it be so, Mr. House? I don't think so. Why should not a plainhead be as long as a coppy? I am glad to see his remark on Mr. Barrass's ticked yellow plainhead. If he could only stand up, what a bird he would be! He has no roughness about him, a really grand bird. Now, South Country fanciers, take Mr. House's advice. Take up the Lancashire. Don't be afraid, it is a good, free hreeder, no more trouhle with him than any other, whilst you have a better chance to breed them for show than we have, with your warmer climato and earlier spring, and no black smoke from factory chimneys as we have. Thus you have plenty of chance to breed a good one. What do I hear you say? You don't know where to buy them. Wait until they have moulted, say about November, look in CAGE BIRDS, and you will find plenty for sale. Have patience. Let me tell you, there are a lot of good men and true in the North who will serve you well, and enable you to have confidence in the men you buy from. The Palace judge tells me Mr. Green's yellow coppy that won at the Palace is a stormer, so if he can breed a good one, why cannot others who live in the South? There must be thousands of plainhead Norwich, lad's birds I call them. The Lancashire is a man's bird, I tell the Norwich breeders about here. What is this I hear, Mr. Compston wandering ahout the joiner's shop looking for a block of wood for the Lancashire cages to stand on at the Palace Show? Don't you like the show cages without legs, friend Sam? I don't; I would lift the bird as nigh as possible. No man can see a Lancashire on the floor. What with the legs of the cages, and the low tables, the birds are very low down. Take Manchester Show on the Saturday afternoon when the room is packed. What chance has anyone to have a good look at the birds? If you stoop down to look you are in someone's way, and it is not pleasant. If the eages were high up everyone could see the birds. An exhihitor does not like to see people keep lifting his cages off the bench to look at the birds. I am surprised at the L.L.F.A. members allowing anyone to persuade them to knock the legs off the eages. I am hoping to see something from Mr. Compston on the Lancashire, perhaps he will have something to say about the staging. Allow me to thank you, Mr. House, for your splendid lecture on the bird I love so well.

E. FULLER.

Glossop.

THE TYPE OF THE NORWICH.

SIR,—Having read Mr. Raynes' letter, perhaps a few remarks would place the matter more clearly hefore the Fancy. We have had lately much dissatisfaction amongst Norwich breeders, both North and South, as to what standard they are to hreed up to. The judges also are divided amongst themselves as to points, judging their birds according to individual opinions as to the hest bird, so at our last committee meeting it was proposed that we invite all Norwich fanciers who can attend to come and discuss this question, with the hopes of getting a universal standard which all clubs can work hy. The Southern Norwich Club are not taking any further responsibility than bringing together all interested in this matter. It will recommend to the Northern and Scottish clubs its final decision on the matter, asking it to he put before their committees. Then we may be able hy a universal vote to place before the Fancy a definite standard, and the judge that abides by it will become the most popular man in the Norwich section, and his fame will he great amongst his critics. I have, I hope, chosen the most suitahle night, so as not to keep any away who wish to express their opinions, and trust all may come with the desire of giving practical help towards this important question, and not to hring personal grievances against judges or first winners.

F. S. MATTHES.

A Defence of English Judges.

At a meeting of the Greenwich and Deptford, etc., Society at the Two Brewers, Church Street, Greenwich, Mr. Meades in the chair, Mr. George Gardner spoke on "The Norwich Plainhead." "It has been said elsewhere," declared Mr. Gardner, "that at English shows colour and size are standing before shape and quality. I deny it. On my own behalf, for years, I have consistently tried to put shape first in order, and I believe all my fellow judges, recognised as such, have done the same. It may he that there is a necessity for a conference to discuss matters relating to the Norwich Plainhead, and good may come of it. I am glad there is a movement on foot for this end." Mr. Gardner then dealt at length with the chief characteristics of the Norwich Plainhead, viz., shape, quality, and colour. He drew a word picture of a real, live (not wooden) bird of nice carriage and "flow," one that gripped its perches as if it meant it, and "carried its tail hehind it," not underneath the perch as soon as its feet gripped. He laid particular stress upon the quality of feather in the yellows, and insisted, no matter what might be said by some to the contrary, that the buff texture of feather on the yellow hird was the correct thing, taking as an illustration Mr. Edward Baker's heautiful Palace medal winner on the point. The hard, indented feathering one sometimes saw on yellows, was all wrong. The lecturer advised his hearers not to despise the hirds that showed a slight gutter from the eye backwards to a pin point. These were deprecated hy some and called "hornсy," hut he ventured to say that such always carried quality in a remarkahle degree. In this point Mr. Hazell, Mr. Hill (the hon. secretary), and others afterwards bore out the lecturer's remarks. Colour, Mr. Gardner thought, could he ohtained from the use of the green hlood, and this remark was greatly strengthened hy a statement from the Chairman, who said he had bred a heavily variegated yellow from two huffs—one a variegated and the other a clear. This, said the lecturer, went some way to prove that in the green hlood lay colour pigment. Asked how he should proceed in order to hreed self greens he advised going to a breeder's room where they knew the green blood dwelt, and ohtaining two heavily variegated birds to mate together. "Why try variegated birds, when you can go to Liverpool and get the real things?" was a question put by Mr. Hill. "Because," said the lecturer, "yellow self greens are nearly always thin, and heavily varicgated are often stouter, and if you go to a known hreeder's room in your midst, you will get what you want for Norwich hreeding hy obtaining two heavily variegated. From these you would most likely hreed greens. Thus you will also patronise home industries!" In answer to further questions, Mr. Gardner said he was not particularly enamoured of large hens, either on the point of hreeding for quality or shape, and he was quite certain that they were not always the best of mothers—could not be generally compared to the small hens in this latter respect.

A hearty vote of thanks was moved to the lecturer by Mr. Stacey, seconded hy the Hon. Sec. (Mr. Hill), and supported by the Chairman and others.

PARASITES ON CANARIES.

SIR,—In the hands of an expert I can quite believe that the method of clearing birds of lice, described by your correspondent last week, is preferable to dusting them with powder, though I doubt whether a single wash will prevent all the eggs that are on the hird developing, although the lice may not he sufficiently numerous to be noticeahle again for some time. But when one is only a novice at washing birds it is far better, especially at this season, to depend upon dusting than to wash the bird. As for the risk of catching a hen that was near laying to dust her, I am quite sure that in every case to catch such a hen and put her through the process of washing would he infinitely more risky than to catch her and dust her. And, again, hirds that are in vigorous health, as all hreeding hirds should be, are not generally troubled with grey lice. Dusting requires more time, it is true; but, then, the number of birds troubled with these p sts is very small compared with red mite attacks, so that there are fewer birds to be dealt with.

THE DISQUALIFIED GREENS.

C.B.U. Resolution.

SIR,—I enclose a copy of our hon. solicitor's (Mr. H. R. B. Tweed) opinion of this resolution, re the two Green Canaries disqualified at the late Palace Show.

J. W. RAMSDEN.

[COPY.]

May 2nd, 1907.

Dear Mr. Ramsden,—In reply to your letter of the 30th ult., I have read the resolution of the Executive Council of the Cage Bird Union re the disqualification at the National Show of Messrs. Clayton and Stewart's birds, and am of the opinion that it only exonerates Messrs. Clayton and Stewart from any personal duplicity in the matter, and does not reinstate the disqualified birds, so the decisions of the tribunals below would appear to stand. I return all the papers.

(Signed) H. R. B. TWEED.

SIR,—Kindly correct statement saying I was unaware of these "jagged feathers." Mr. Clayton was unaware that his bird had them, but I was fully aware that my bird had them. Mine was a good bird with a slight defect, namely, "bad in pencilling," caused by the jagged feathers spoiling same. Had an experienced judge of "Greens" been over him at the Palace, he may have stood a chance of being in the cards instead of being disqualified. If some judges would only think a little, and not consider themselves "I am's," they might save innocent men heartaches. I am always open to give in when shown I am wrong, but some others have no broadness of mind, and cannot give in if wrong.

C. STEWART.

AN INACCURATE REPORT AND AN APOLOGY.

SIR,—A grossly inaccurate report of Mr. J. H. Scothern's lecture on "Crests, Past, Present, and Future," given to the members and friends of the Nottingham and Notts O.S., appeared in a contemporary on March 22nd and April 5th. This was followed by a letter from Messrs. Scothern, Rhodes, and Ley, which appeared in the same paper of the 12th of April, in which they said that the report was not a faithful record of what took place. There was also a letter in the same paper on April 19th from Mr. Chick (the reporter), in which he said that he gave a faithful account of what transpired at the lecture. Of course, all this produced an undesirable effect, and the outcome of certain proceedings which have been taken is that Mr. Chick has written the enclosed letter, which I hope you will be good enough to publish in your next issue. Thanking you in anticipation.

G. E. WILKINSON,
Hon. Sec.,
Nottingham and Notts O.S.

May 6th, 1907.

To Messrs. J. H. Scothern, Robt. Rhodes, and G. C. Ley.

I hereby admit the truth of the statements contained in your letter to a certain journal, which appeared in that paper on the 12th of April, 1907, to the effect that my report of Mr. J. H. Scothern's lecture on "Crests, past, present and future," was not a faithful record of what took place, containing as it did statements not made and other inaccuracies. I also withdraw the statements contained in my letter which appeared in the said journal on the 19th of April, 1907, denying the accuracies of the statements contained in your letter before referred to, and I hereby apologise to you for having caused such mis-statements and inaccuracies to be published, and authorise you to send a copy of this letter to CAGE BIRDS.

(Signed) HERBERT J. CHICK.

[We publish the above apology at the request of the Nottingham Society, but we should like to say a few words about it. The incidents which have resulted in its publication cannot be said to reflect any credit upon the reporter, but they entail, in our view, no disgrace upon the journal which published his report, for the most careful editor is liable to suffer for the errors of a representative. The offender is a young man, and no doubt with more years will acquire more wisdom.—Editor, CAGE BIRDS.]

ARE BLACK MEALWORMS WHOLESOME?

SIR,—I think when Mr. Claude St. John writes about black mealworms he is a bit out of his depth. He evidently does not know a genuine black mealworm, or he may as well argue that because some Europeans get discoloured or turn black after death, that there are no healthy niggers. I import hundreds of thousands of mealworms from Germany, and there is not one black mealworm to five thousand others, but when I get some brought in from the local flour mills, frequently more than fifty per cent. are black ones, but not as Claude St. John thinks, unhealthy ones. He seems not to know the difference between a black specimen and white ones that are dead or in a dying state through overcrowding. It does not take long to get some of Claude St. John's kind of black ones if you have too many in a tin or box so that there is too much weight on the bottom ones. I have never kept the black ones separate to see if black breeds black.

C. P. ARTHUR.

BIRDS AND THEIR CHARACTERS.

SIR,—I have read with great interest Mr. H. Bollard's quotation from the "Journal of Horticulture," and must, like him, say that I've never known the Bullfinch to commit murder in the way described. We have plenty of bees and plenty of Bullfinches here, and having been a keen observer of bird life in gardens during the past twelve years, I think I may speak with some experience. It is well-known that the common Tits are offenders in the respect of Mr. Bollard's quotation, and it may be that the "Journal's" correspondent got a bit mixed somehow, or, perhaps, the chance may be, he didn't know "t'other from which."

THE KEYSTONE OF THE C.B.U.

SIR,—As a trades unionist fancier I have believed from the very first that the Cage Bird Union would be a great boon to the Fancy, providing the keystone, Rule 17, is in no way interfered with. Therefore, I hope the majority of societies will do as Blaydon did on Saturday last, and vote solidly for retaining the rule in its present form. Trades unionist members of affiliated societies should turn up at their next meetings and cast their votes on this important question. Now, sir, being willing to leave the issue to the good sense of the various societies affiliated to C.B.U., I would not have troubled you on the subject had it not been for Mr. T. Taylor's letter in your last issue. His epistle winds up with two questions sandwiched with an assertion—I feel sure without foundation:—Question 1: Is it not a fact the C.B.U. has put greater hardships on to societies than they can well afford?—No. I don't see where it has. Ours is quite a young society, and feels no hardship in complying with the conditions of membership. Then he asserts some societies, not including Gateshead, have even "yes, even actually," to pay their delegates' expenses to district meetings, and cannot even "actually" learn any business transacted at such, or, if any, of the scanticst. Now, sir, as a delegate on No. 1 district committee, I don't believe there's a man on the job gets his expenses paid. I believe I am correct in saying the only delegate working for an ordinary mechanic's wage is your humble, the others, good luck to them, occupying a better position in life, and even I don't have my expenses paid. As to whether the members of Blaydon C.B.S. learn any business transacted at such meetings, I leave him to ascertain, which he can easily do if he chooses. Then this advocate for the abolition of all knavish practices and everything that does not tend to a better understanding of each other, goes on to cast a slur upon the committee by asking question No. 2: Are members willing to pay to secret societies? Far from being secret, the No. 1 committee is composed of some of the most fair and open-minded men it has been my pleasure to work with. Men who give every question that comes before them full and impartial consideration, and who, when necessary, have the moral courage to take a stand against any or every malpractice the Fancy is encumbered with.

D. A. OGILVIE.

SIR,—In your issue for May 4th appears a letter signed T. Taylor. With the greater part of his letter I have nothing whatever to do. I would, however, like to ask Mr. Taylor for an explanation of the last part, which reads as follows:—

"Is it not a fact that the C.B.U. have put greater hardships on to societies than they can well afford? Some societies, not including Gateshead, have even to pay their delegates' expenses to district meetings, and cannot even learn any business transacted at such, or, if any, of the scantiest. Are members willing to pay to secret societies?"

This extract has nothing, so far as I can see, to do with any other part of his letter, therefore I cannot be accused of picking out a little bit and reading my own meaning into it. I am a member of the Union, but not bigoted, and quite understand other fanciers having a different opinion, and holding aloof, but the Union is not a one man affair. The societies form the rules, and if any hardships occur to any society, they should ventilate them, and have them remedied. Re delegates' expenses to district meetings, it was decided at the first meeting that societies pay such expenses; that does not mean some societies, but all societies affiliated. The Union pays expenses only when a Executive Council meeting is called. Can Mr. Taylor inform us how many district meetings have been held during the past year, in the particular district he refers to, what was the nature of the business of each meeting, and were the meetings always held in one town, or in different parts of the district? It may be possible the secretary of the district fancies his job, and calls a meeting periodically, whether there is any important business or not, thereby putting societies to needless expense. If so, the district have the matter in their own hands; sack him, or teach him his business. Re obtaining information of business transacted, does Mr. Taylor really wish us to believe that any society, either in the cage bird Fancy, or any other Fancy, will appoint a delegate to represent them at certain meetings, and then allow that delegate to withhold the very facts he has been specially sent to obtain. I should think these are the same societies who have had the hardships referred to. Any of the societies could obtain any information they require from Mr. Lythgoe. Will Mr. Taylor furnish us with the names of the societies he refers to, and the name of the delegate; they might like to hear about it? There is no secret society about it, and any hardships, if properly ventilated, would, I think, soon be put right. Let us have them in proper form, Mr. Taylor, and see what can be done with them.

C. R. STEPHENSON.

THE SCOTCH FANCY CANARY.

A MODEL PLATE.

SIR,—The model of the Scotch Fancy Canary by the famous judge, Mr. Robert Wright, of Greenock, is still the most popular—that gentleman has been asked to send a plate of it to New Zealand. It is certainly a very fine ideal, and is, therefore, worthy of aiming at in the breeding of the Scotch Fancy Canary. Those who objected to it at its adoption have gone out of the Fancy; the opposition was very faint, but has vanished. I should like to see it reproduced in your columns.

A FANCIER.

"LIKE A FAIRY TALE."

SIR,—I was very much interested in "Like a Fairy Tale" in this week's CAGE BIRDS. Two years ago I was changing one of my birds from one brass cage to another, when I had the misfortune to break the leg of the bird. It could only use one leg, and the other hung down, and it was pitiful to see it. I thought it would never do to see a bird in such a state, so decided to at once put it into splints. Whilst doing this I thought it would be better to keep down the inflammation if something could be put upon it, and on looking round I found a small box of Zam Buk, which someone had thrown in at the door. I put half of this on the cloth and bandaged it up neatly and put the bird in a box cage. I took off the splints a week afterwards, and to my surprise I found the bird using both feet, although a little stiff. It was quite well a day or so after and is still to be seen living, although nine years old, and is still in full song. There must, therefore, be something in this Zam Buk for birds, and if occasion ever arose I should not hesitate to use it again. I may add I am an old reader of CAGE BIRDS since No. 4, and have never missed a number since the first one I took, and would not care to be without it. This being my second season and have 16 pairs up and some now startiug on round two after bringing up the finest birds I have yet bred. May you and the paper prosper is my sincere wish.

ANDREW M. FIRTH.

FALSELY ACCUSED!

SIR,—Whilst down in Liverpool last week I came in contact with a little group of the members of the Green Canary Association. After a little chat I was asked if I had heard the latest. Of course, not knowing what they were referring to I replied, "No, what is it?" One of them appealed to the remainder, "Must I tell him?", They answered, "Yes." I was then asked if it were I who wrote under the title of "Lancashire Lad" in CAGE BIRDS? I told them that I knew nothing at all about it, but I remembered seeing the letters in CAGE BIRDS. I was then told that it was a general belief at the meeting of the G.C.A. that it was I who signed myself "Lancashire Lad." The Bootle members were strong in the belief. I must say that I have been wrongfully suspected of being "Lancashire Lad." Also that I have no idea who "Lancashire Lad" is. With regard to me writing to either CAGE BIRDS or anyone else, I may say I have not been able to write at all on account of a long sickness. The G.C.A. came to the conclusion that it was me through, I believe, "Lancashire L-d" speaking on the Lizard. The members of the G.C.A. knew that I was one of the oldest Lizard fanciers in the district, and came to the conclusion in one way through that. Then, on the other hand, "Lancashire Lad," if I remember correctly, spoke of his experience of the greens. This should have taken suspicion from me, as they knew that I had not been a breeder of the Yorkshire Greens. I may also say that I have no recollection of writing to any paper only when I have signed my correct name. It is not my duty to ask the Editor who "Lancashire Lad" is. All that I want is to ask the Editor of CAGE BIRDS to state whether or not it is me, this being the only way to prove me guilty or otherwise.

ALFRED WELLINGS.

[Mr. Wellings did not send us the letters signed "Lancashire Lad," and, so far as we know, had nothiug whatever to do with them.—ED. "C.B."]

EGG-BINDING EXTRAORDINARY.

SIR,—It was with very great interest I read W.R.S.'s note re egg-bound hen, also Mr. J. H. Payne's remark concerning same in your issue of May 4th, as it so happened that I have had a three-year-old Crest hen affected in the very same way for the last three weeks, only that she was not too fat at the time she should have laid. I put her through the same process as W.R.S., but gave it up last Wednesday, having come to the conclusion that after all it could not be an egg, although it had the appearance and felt like an egg, only it seemed to be a very large one. I consulted a brother fancier, who said he thought it must be a growth, and who had once lost a hen something similar. After reading Mr. Payne's notes, I again examined her, and felt almost convinced it was an egg, but did not do anything more, as I had made up my mind to let things take their own way, as it appeared hopeless. Well, what was my surprise on looking into her cage this forenoon to find that she had laid on the cage floor, and the egg, although badly cracked was only a usual sized egg for a Crest. She seems a good lot brighter now, although she was never what you would call fairly knocked up, or off her feed. I should be pleased to hear if W.R.S.'s hen gets rid of her egg in the same way. I may add that she had not laid at 8 a.m., but some time between that hour and 11 a.m. I think W.R.S. need not trouble about the remaining eggs, as it is not an uncommon occurrence for a hen to lay one egg and perhaps no more for three or four weeks. As for the incubation, it could hardly be expected, I think, to make much progress in that direction seeing under what very different conditions incubation takes place.

J. MCNAUGHTON.

Dunniface, Larbert.

SIR,—Last week, as I was walking to Mayfield, I picked up from the grass by the roadside a dead hen Chaffinch. She was quite plump, and her plumage perfect and unruffled, and I wondered what could have caused her death, until, as I was skinning her, I found an egg, with shell complete, on the point of being laid. I suppose that this unseasonable cold causes egg-binding, even in wild birds?

Sussex. D. HAMILTON.

The Cockateel

(Calopsittacus novæ-hollandiæ).

By WESLEY T. PAGE, F.Z.S., M.B.N.H.S., etc.

HABITAT AND WILD LIFE. — Indigenous to Australia, breeding in the south, then migrating to the north. It is found in vast numbers. According to Gould these birds are found breeding in the wooded flats of most of the rivers that flow to the north-west. He states he has seen the ground covered with them engaged in feeding on the seeds of mature grasses, etc., and that it was no uncommon circumstance to see them by hundreds on the dead branches of gum trees in the neighbourhood of water, which they frequently visit for the purpose of satisfying their thirst; comparing this with their similar practice in the aviary, it would appear that a constant supply of water is essential to keep them in health and condition. With the exception of the north-east corner of Queensland, they range practically over the whole of Australia.

Quarrion is their native name; they are also known as the Crested Ground Parrakeet, and Grey and Yellow Top-knotted Parrot. But such names are seldom used either by dealers or aviculturists in this country.

THE COCKATEEL.

This is the Australian Cockatoo-Parrakeet, an engaging aviary favourite. The name (frequently mis-spelt "Cockatiel") was, we believe, invented by Mr. Jamrach, being an English adaptation of a Dutch word which means a little Cockatoo.

PLUMAGE.—Adult male: The general body colouring is an extremely chaste arrangement of greys and white, the contrasts of which are very striking, yet with an entire absence of harshness; this, combined with its beautiful primrose-yellow cheeks and ear patches of brick-red, combine to make a really striking and handsome bird. The crest is mostly yellow, as are the cheeks, the top of head, neck, back, and wing, ashen-grey; there is a broad band of white from the shoulders over the greater wing coverts; the under parts are paler ashen-grey; tail, dark grey on its upper surface and blackish underneath; beak, legs and feet, grey; iris, nut-brown. Total length, 13 in.; tail, 5½ to 6 in.

SEXUAL DISTINCTIONS.—The female lacks the yellow cheeks of the male, hers being grey, slightly suffused with yellow; her ear coverts are greyish-red, those of the male being bright brick-red; her crest is entirely grey, that of the male being practically all yellow; the underside of her tail is regularly barred with grey, yellow and white, that of the male being dull black.

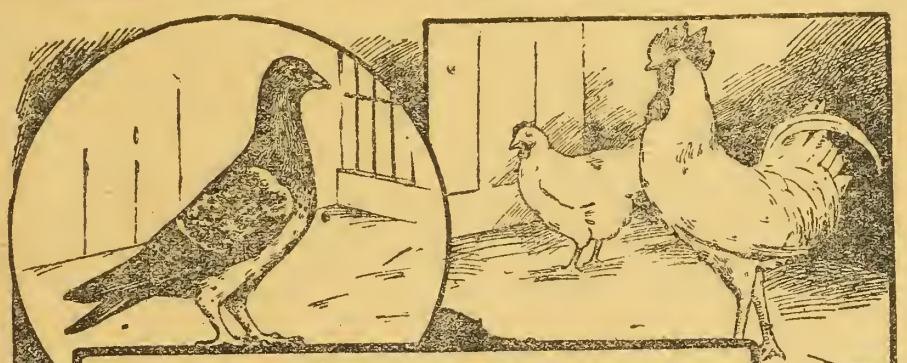
YOUNG.—These resemble the adult hen, but are a trifle greyer and their plumage lacks the bloom of adults. At the first moult they come into adult plumage and cannot then be distinguished from their parents. The primrose-yellow cheeks of the males increase slightly in intensity with each successive moult; this is also the case with the females, the yellow suffusion on their cheeks being much stronger on old birds than in those of, say, two years old. They are quite blind for the first five or six days, and covered with longish yellow hairs; they soon grow, and are ugly masses of pen feather at from six to 14 days old, and are fully fledged at about three and a half weeks old (it is very difficult in a large aviary with these birds to tell their age to a day or two, as with the large amount of noise going on, the faint call of the young is almost drowned by the other avian noises for the first few days); they leave the nest at from four and a half to five weeks old, sometimes a little longer; though some writers give it as three or four weeks, but this has certainly not been my experience. They return to the nest for the first few nights, but soon settle down to roosting among the branches, and mostly in the open portion of their enclosure. A keen observer can usually pick out the sexes even in their nest feather; in the males the front of the crest is lighter than that of the females, and the observant aviculturist will soon learn to sort out the sexes when they are about six or seven weeks old, or even earlier.

BREEDING.—In their native haunts they nest in the spouts or hollow limbs of the gum trees, so common to Australian wilds. It fashions some cavity to its liking and lays its clutch of three to five white eggs (1.2 by .90 in.) on the bare wood. Incubation takes 16 to 17 days; both sexes take part in incubation, the male during the day and the female during the night. The season is from November to February, and two broods are usually reared. In the aviary the best nesting receptacle is either a log (obtainable from any large dealer), or a small barrel hung up longitudinally, with a 3 in. diameter hole cut in one end; these birds have a mind of their own and will use it too, and mostly choose, when in a mixed series, any receptacle but the one put up for them, as I know to my cost; have had this season practically nullified by their annoying stupidity in this respect; they have chosen flat-bottomed boxes, and nearly all the eggs have been spoiled by rolling about. This is one of the inconveniences of keeping a variety of birds together.

They do not attempt to breed till they are two years old, and even adult birds seldom breed the first year of their occupancy of the aviary, but usually they settle down to nesting seriously the following year, and keep merrily on, only stopping (not always, for I have had young reared during this period) for the moult. They seem more prolific in the aviary than in their native wilds, sometimes as many as seven being reared as a single brood. The young emerge at intervals, as the hen begins to sit with her second egg, so that there is fully a week between the first and last hatched when the clutch is a full one. This seldom makes any difference, for all are usually reared, and often the first out assists in feeding his brothers and sisters. It is seldom, indeed, that any mishap occurs, for with the plentitude of food to hand and immunity from the dangers common to all wild life in their native haunts, they are practically continuous breeders in the aviary; occasionally a pair turns up that lay eggs innumerable and seldom hatch one out. With such there is nothing to do but get rid of them (turn them loose in some park) and procure another pair.

My first brood of young were reared entirely on canary, millet, and greenstuff, but later they have had access to soft food, oats, dari, sunflower, wheat, etc., and mealworms, and they help themselves freely to all, as also do the Budgerigars. When kept in an aviary to themselves let them have a pan of canary and white millet, and another of wheat, dari, oats, and sunflower, with green food ad lib., just what happens to be in season, they are extremely fond of grass in flower. A liberal supply of old mortar rubbish, crushed egg shells, and cuttlefish must be kept up or cases of egg binding will be frequent. I have always attended to this and have never had a case of egg binding with this species. If a young male is taken as soon as it can feed itself, or better, as soon as it is fully fledged, and hand-reared, they make charming pets as single cage birds, and learn to speak a few words. I have seen such, but have not personally so experimented with them.

GENERAL NOTES.—This is the bird par excellence for the mixed series in an outdoor aviary, for with many years' experience of these charming birds, I have never known them to even snap at the smallest occupant of their enclosure. If not clad in royal purple as some of their congeners, they are certainly not plain or dull coloured birds; my oldest male (10 years at least) is a handsome fellow, the grey and white contrast of his body plumage, brilliant yellow cheeks, and red ear coverts, make him one of the most striking birds in the aviary, even with Red Rosellas to bear him company, and when moulting he never seems to have a feather out of place; he has never had the slightest ailment all the years he has been in my possession. It is really a shapely bird and of generally fine appearance, of a confiding and fearless demeanour. My birds will permit me to do anything with them, some actually pick them up, will take their food on the ground close to my feet, so long as I keep still, and on the branches will not move when I am within six inches of them, only if I attempt to lay hold of them, then they will fly to another perch near at hand; and though I have many rare and valuable birds, very few of them are more interesting, and in spite of their being now comparatively common I should certainly not care to banish them from the aviary; though I must admit I should find them trying in the house. That is their one fault, they have a voice, and they believe in using it. At the same time, I am bound to say that I have never had any of my neighbours lodge any complaints thereto, and I can with confidence recommend this as an interesting and entertaining pet, especially so for the garden aviary; and as they thrive even with the roughest treatment, the veriest tyro need not hesitate to try his prentice hand with them. Budgerigars are not safe with Finches, etc., but the Cockateel I have never found to harm even the smallest Waxbill, though I have kept the species on and off for over 20 years.



Important News to Breeders

AND

Flyers of Pigeons and Poultry, . .

Aviary Keepers and Dog Fanciers.

All Breeders and Flyers should know that Hall's Sanitary Distemper is the best thing known for ensuring perfect cleanliness in breeding and store cages, show pens, fowl houses, kennels, etc.

It is sold in tins ready to mix with water, and is applied with a whitewash brush.

One coating effectually destroys all the insect life and fever germs, etc., which collect in cages and kennels.

At the same time Hall's Distemper is non-poisonous to bird and animal life.

It is made in two qualities: the outside quality is the one specially recommended for the above use, and suitable colours are—

No. 17, Cream. No. 66, Pale Green. No. 47, Pale Blue.

HALL'S DISTEMPER

is sold by all Oil and Colourmen, Stores, etc.

Remember to ask for Outside Quality.

Sole Manufacturers—

SISSONS BROTHERS & CO., LTD., HULL

199B, Boro' High Street, London, S.E.

Full particulars with sample and shade card will be sen post free on application.

The Breeding and Exhibition of the Norwich Plainhead.

By J. A. ECKERSLEY.

A Lecture delivered before the City of Birmingham C.B.S. on May 1st, 1907.

AN OLD AND WELL-WORN THEME.

I have an old and well-worn theme to deal with, but it is of perennial interest to probably a larger number of Canary fanciers throughout the United Kingdom than are interested in any other variety. Thousands of breeders are constantly on the qui vive to increase their knowledge of the best and most scientific methods of procedure in the struggle to realise their ideal; ever ready to compare notes, to weigh and sift suggestion and to profit by the experience of those who have been fortunate enough to achieve more than an average measure of success. And I venture to assert that if a non-fancier should ever be so unfortunate as to find himself pitchforked into the midst of a knot of devotees of the Norwich, or, indeed, any other birdy-cult, without the possibility of immediate escape, he would hear enough "shop" talk inside half-an-hour to develop an acute attack of appendicitis, or to arouse into violent activity any latent homicidal tendencies. Now to the first part of our subject.

THE BREEDING OF THE NORWICH PLAINHEAD.

The present season is well under weigh, but we will assume that it is just about to commence, and that our hopes, and our fears, too, are still unrealised. We have brought our stock gradually forward, forcing, however, extensively and profitably practised in horticultural nurseries, being altogether out of place and unprofitable in the bird room. The stock of birds have been storing up energy in large flight through the winter—the cocks until five or six weeks after Christmas, and the hens until about the middle of March. It always pays to let the hens have a good, long, rollicking holiday, for it means better results later on than would otherwise be the case. Just here I may as well give you an idea of the winter menu in my room. First, of course, comes the staff of life, in the shape of the very best Spanish Canary seed I can lay hands on. Twice a week I give a mixture consisting of proportionate parts of rape, hemp, linseed, mustard and inga seed. Occasionally I give a little maw and a few sunflower seeds (cracked) separately. Sweet apple, carrot and soaked and boiled rape complete the list. I use little or no egg food among the stock birds until the advent of March, but in February I give the mixed seeds three times a week. When the birds are in roomy flights they may be granted a more liberal allowance of oily seeds than would be advisable if they were kept in breeding cages, without running the risk of inducing that Falstaffian opulence of contour which, with the simple directness of language that is one of the most charming characteristics of the average fancier, I have heard referred to as "blooming fat."

In very severe weather, too, open-handed generosity in the matter of diet will prove a wiser policy that the substitution of artificial heat.

THE APPROACH OF SPRING.

At the beginning of March I allow the birds a little egg food twice a week, with sugar (castor or soft brown) and maw seed added to it. About the middle of March I cage off the hens, and increase the supply of inga seed. I give all the birds plenty of sweet apple, and in the spring and summer I use considerable quantities of germinated rape, prepared as follows:—I put a quantity of rape in a dish, fill the dish with water, and allow it to stand for 24 hours; I then strain off the water, wash the rape well under the tap and turn it out on a plate. As soon as it begins to sprout it is ready for use. I generally have my birds in dancing condition towards the end of March, and I pair up at the beginning of April. There are some who are strongly in favour of allowing the cock and hen to inspect and criticise each other's personal appearance from opposite sides of a wire partition for some little time before the nuptials, but really it is not necessary. At least it is not in my room.

A CLEAR AND DEFINITE AIM.

Having brought the stock into breeding condition, the question arises, have we a definite object in view? Have we a clear idea of what we want and of how we are going to get it? Are we going to pair the birds in a "hit-or-miss, happy-go-lucky fashion, or are we prepared to take the trouble to conduct our breeding operations on scientific lines? There is no doubt that if we are to go forward instead of backwards we shall, most of us, be compelled to give more serious attention to the why and wherefore of pairing than we have hitherto done, and to remember that the maxim, "One thing at a time, and that done well," is as applicable in the breeding room as anywhere else. There is a very striking passage, quoted in Mr. Blakston's monumental work from an article (one of a series) on "Pedigree Breeding," in the editorial columns of the "Live Stock Journal and Fancier's Gazette," of twenty years ago, which, as Mr. Blakston truly said, every Canary breeder should learn by heart:—

> "Every variety has some point or points which demand long breeding and patience to acquire, and on these should attention first be fixed and kept there, gradually giving attention to others, not by turns, but just as fast, and no faster, than the increased number of birds of good in the first point, and, therefore, admissible to breed from) enables selection for the second and subsequent points to be made. One thing, however, is obvious. The best birds, from the breeding point of view, must never be sold, but kept for the breeding room; for a man cannot reasonably be expected to make any progress who is constantly selling what represents nearly all the ground he has gained."

BREED FIRST FOR TYPE.

Now I think you will agree that the first and most important point in the variety with which I am dealing is type, and I do not think anyone will dissent from the statement that 99 out of every 100 of the exhibition birds of to-day leave very much to be desired in this respect. I am afraid it must be admitted that what our friendly critic from "down under," Mr. White, of Melbourne, said in reference to the failure in type of the great bulk of the Norwich exhibited at the Palace was nothing but sober truth. He could not make the birds and their "pen and pencil descriptions" tally; and, really, the discrepancy is sometimes too funny for words. This didn't ought to was, as Artemus Ward would have said, and, considering the number of brainy breeders we have, it is nothing short of marvellous that it should be possible to lay such a reproach upon us. Type, then, is the first point upon which our attention must be fixed; the one essential to which everything else must, for the time being, be subordinated. It is an undoubted fact that the hen is a more potent factor in the production of shape than the cock, but we shall fix the point at which we are aiming with greater certainty, and in less time, if we select both parents for that property.

BEAUTY LEEDS THE WAY.

Let us suppose that we have a sweetly-typical hen and that we have two cocks to choose a mate from for her, one a bird of superb quality and teeming with colour, but rather long-sided, the other as good in type as the hen, but a little coarse in feather and flat in colour. Personally, I should, without hesitation, choose the latter, and trust to later selective breeding to recover both quality and colour. Of course, we shall have to do the best we can with the material at our disposal, but if we can only find two or three really typical pairs in our room it will be a beginning. From these we shall be able to start two or three strains. The first year we may be disappointed at the small number of shapely progeny; so much will depend upon the ancestry, not only near but comparatively remote of the parents. For, as the authority I have already quoted pointed out, "in numerous cases in which no resemblance can be traced in children to the immediate parents, a startling resemblance can be traced to the grandparents, or even to ancestors still further back"; and Darwin showed that there was a tendency in all animals to throw back to long lost characters.

LIKE BREEDS LIKE WHEN IN-BRED.

All this tends to prove that like cannot be depended upon, with any degree of certainty, to produce like, unless it has been bred from like for generations. With two or three, or more, pairs, all selected first for the one supremely important point, we shall be able to avoid the ill-effects of close and persistent in-breeding, as we can safely pair birds from one family with those from another, without running the risk of "dropping the next link in succession." The second year we shall have a larger proportion of typical birds, and if among these are some good in quality of feather also, we can proceed, without loss of time, and without interfering with the development of the first point, to fix the second. The third year we shall have a very good percentage of shapely youngsters; a few, at any rate, will be good in quality, and we can begin to select for the third property—colour, and so on—until we have established a strain that can be relied upon to produce stock good, and sometimes superlatively good, in all the characteristics of an ideal Norwich.

CONCENTRATION MOST DESIRABLE.

In concluding this part of my subject let me say that the watchword of the scientific breeder is concentration. We must aim to obtain control over hereditary tendencies, and, by selective breeding, to focus them upon a given point, thus making them subserve our ends.

I have purposely abstained from dealing with questions of general management during the breeding season, preferring to confine my attention to matters less commonly enlarged upon, but which are, in my opinion, of vital importance to the breeder who aspires to the front rank. Many a man fails because he attempts too much at once. He breeds, say, a bird exceptionally good in type, but failing a little in quality or colour. The probability is that next season he will mate it with a bird good in quality, or colour, as the case may be, but failing in type. Result, a number of youngsters exhibiting the weak points of both parents. And so he goes on, year after year, in the old sweet way, trying to get all the valued points at once, and never giving himself time to fix one of them. I think, with Mr. Blakston, that "the entire feather world is indebted" to the writer of those articles on "Pedigree Breeding" for having pointed out the better way. Let us now pass on to a brief consideration of questions pertaining to

THE EXHIBITION OF THE NORWICH PLAINHEAD.

As the moulting season, to which I shall not be expected to make, in this lecture, more than a passing reference, draws to a close, the breeder will watch with eager eyes for signs of promise in his youngsters. Any that look like developing into specimens of exceptional merit must, of course, be caged off, together with the veterans that are required to do battle again for the house. It will be well to hang a curtain of muslin, or some similar material, in front of the cages, to shield them from dust and dirt, as well as from a strong light. You will then be able to show them once or twice without washing, which will be a decided advantage. During the latter part of the moult I mix linseed meal with the egg-food, and I give a piece of carrot three times a week. The latter is an excellent conditioner. I give, too, a little sulphate of iron in the drinking water twice a week. I need hardly say that a bath must be given on fine days; birds that persistently ignore it must be sprayed.

It is necessary to continue the supply of colour food to show the birds right through the season—twice or three times a week will be sufficient after the moult is finished. The blood must be kept impregnated with colouring matter or the plumage will certainly suffer seriously in tone and bloom. To exhibit with any chance of success the birds must be put down in first class condition. Discretion will have to be used in feeding, but if you should happen to overdo it a bit, and get a good bird into the "rank breeding condition" so much deprecated by our friend, Mr. Vardy, you can exhibit it as a "bird of position," and take a rise out of the Yorkshire men.

DO NOT OVERSHOW.

It is not advisable to send to more than three or four shows weekly, unless you have two teams. If you do you will probably have some lynx-eyed reporter remarking that your birds are down in condition through being overshown; and perhaps some of them may be inconsiderate enough to die. I have heard of fanciers who were actually so self-sacrificing, and absurdly considerate of the welfare of their stock that nothing would induce them to patronise more than one show per week. The "laundrying" operations should take place at least three or four days before sending to a show, and the birds should be sprayed, or allowed to bathe, each morning after, in order that they may fine down. Of course, some fanciers may object that this "tubbing" business is unnecessary, arguing that any judge who is worth his salt should be able to recognise a good bird through half-an-inch, or so, of—er—disguise; and I am bound to confess that I have once or twice seen specimens at the head of the prize list that reminded me forcibly of the tramp in the Pears' soap advertisement. Still, most of the judges seem prejudiced in favour of birds that have been sluiced, so it is just as well to humour them. If you should, any of you, be fortunate enough to breed a champion you will be tempted to overwork it; but if you do, you will certainly regret it later. Many a good bird has been ruined in the first show season.

REPRODUCTION BEFORE EXHIBITION.

It is of much greater importance to you that your best youngsters should produce their like in the breeding-room than that they should win a few prizes. We hear, sometimes, of feathered gems having "been picked up" in the most unlikely places.

I was told, some time ago, of a fancier who had bought two or three really first-class show birds (Norwich) for a small sum from a dealer.

Perhaps, with apologies to the shade of the composer of the immortal "Elegy," we may say.

> Full many a gem of purest ray serene,
> Obscure, unvalued Norwich hens may bear;
> Full many a bird be hatched to bloom unseen,
> And waste its beauty on a rustic stare.

Be that as it may, what we have to do is to rely not upon luck, but upon scientific methods. It means untiring patience, and dogged perseverance, but the reward is sure. Let reason and common sense go hand-in-hand with a cheery optimism—the offspring, not of ignorance but of philosophy—and may the season 1907 see more Norwich hatched of the real 22 carat, hall-marked, Bullfinch type, so often seen on paper, and so seldom in a show-cage, than have been produced in any preceding year; and if any among us should find, "the time of the singing of birds" has once more slipped into the dead past, and we have little upon which to felicitate ourselves, let us not weary others with a recital of our misfortunes, but dismiss the matter from our thoughts with a good-humoured shrug, and a mentally registered determination to do better in 1908.

THE CANARY BREEDING SEASON

Is now with us and everyone who contemplates cultivating Canaries for pleasure or profit, should immediately procure the Standard Work on Canaries:—

House's Canary Manual

PRICE ONE SHILLING. Post Free 1/2.

Superbly illustrated by the Champion Canary Artist, Mr. H. NORMAN. EVERY BIRD DEPICTED IS A VERITABLE MODEL, and shows the breeder what to aim for. Some idea of the popularity of this Practical Manual may be gathered from the fact that under the title of "The British Canary," it has passed its Third Edition, entering upon a Fourth Edition of 5,000 copies under the new title of "HOUSE'S CANARY MANUAL."

The following Summary of Chapters, etc., will show you how completely the ground is covered:—

Aviaries and Cages.	The Young Birds.	Young Birds Dead in Shell.	Exhibiting.
Show Cages.	Food for Nestlings.	Red Mite.	Diseases treated very fully.
Perches.	Hens Refusing to Feed.	Clear Eggs.	Every variety of Canary is treated upon at length and illustrated.
Breeding Canaries.	Sweating Hens.	Moulting.	

MR. HOUSE has thoroughly revised and brought this work up-to-date and incorporated a chapter on the "Roller or Singing Canary."

Send 1/2 now and secure a copy hot from the press.

F. CARL, 154, FLEET STREET, LONDON, E.C.

A HANDY BOOK FOR LOVERS OF BIRD LIFE.

BIRDS OF THE COUNTRYSIDE

By FRANK FINN, B.A.

In Cloth gilt, 5/- net.

With about 120 full-page and other illustrations and 12 full-page Coloured Plates

"No better or more interesting companion for a stroll in the spring and summer days could be chosen by those who wish to be on speaking acquaintance with the birds they may come across."—WESTMINSTER GAZETTE.

LONDON: HUTCHINSON & CO., PATERNOSTER ROW.

THE YOUNG NATURALIST.

Prizes of 1s. and two of 6d. each will be given for respectively the best and two second best cuttings or original bits about birds. Competitors must be children under sixteen years of age. All efforts must be briefly and clearly written, and ON ONE SIDE OF THE PAPER ONLY.

Two stars indicate the Winning Contribution; one Star the runners up.

Uncle Peter has received from his nephews and nieces many pretty bits about birds, which, for various reasons, he is unable to put in his corner. G. Taylor and Arthur Edwards, in spite of frequent warnings against the practice, have written on both sides of the paper. Reginald Whitehead and Arthur Surgery have sent interesting news, but they must try to be a little more careful of their handwriting and spelling. There are other children who write very carefully and well, but they have copied out of books bits about quite common birds, like the Sparrow and Greenfinch and Blackbird, which they would have done better to watch for themselves, and then describe in their own words.

Even after eliminating all these Uncle Peter is left with very many charming pieces which he hopes to see printed in time, if only Mr. Editor will be kind enough to find room for them in his ever-crowded and instructive columns.

* * My Magpie.

About April or May last year I wished to have a Magpie, so I went into the fields in search of a nest of these beautiful birds. I was not long before I found one high up in a thorn hedge, so that it was difficult to reach. When I had found the nest, which was a very wonderful structure, the first difficulty was how to gain an entrance to it, for the hole where (I suppose) the parent birds went in was scarcely large enough for me to put my hand in, being all over thorns for protection. Inside the thorns and sticks it was lined with hay, dried roots and mud. The nest contained three or four young ones nicely feathered. I procured two of them and took them home. I fed them on bread, meat, barley flour paste, dog biscuits, and, in fact, a little of almost everything from the table. One of them died, but the other grew, became tame and would stand with his beak open to receive his food. Mag will eat almost anything, and is especially fond of dead birds and mice. He is also fond of taking anything that is bright. The colour of this bird is black and white, and when the sun shines on him his long tail and the flight feathers of his wings shine like metallic green. —Sent by HAROLD RUDKIN (aged 14), Belton, Uppingham.

* Dandy and Browny.

I have a Linnet and it is a very pretty one, and there is a pretty Canary hangs against it. They chirp as if talking to each other, and I believe they say good-night and good-morning to each other. I put the Linnet with a hen Canary, and I am going to try to make them breed. They are very quarrelsome, but I hope they soon will be friends. They are both very friendly with Pussy, and she will sit and watch their movements. I believe she would talk to them if she could. I have a name for the birds—one I call Dandy because he things he is above the other, and the other is Browny.—From EVERARD TOPHAM (aged 11), 52, Church-st., Manningham, Bradford, Yorkshire.

* Christmas Dinner for the Birds.

At Christmas, when there was deep snow on the ground, I got a lot of old crusts and dry bread, soaked them well in hot water, which nearly made a bucket full and put it out for the poor little birds which looked very cold. I also got a saucer of warm water and put outside, as I thought they might want a drink also. Our neighbour, who keeps a dog, and was going to catch some birds to make a pie, thought I had put it there to coax them away from the trap, so he let the dog out to eat the bread which I had put out, but it was too late, as the birds had eaten it all.—Sent by WILFRED KEELING (aged 12 years), Tansley, near Matlock, Derbyshire.

A BOON

AND A

NECESSITY TO EVERY FANCIER.

"Cage Birds" Card Register

and BREEDING CAGE LABELS.

THE STUD REGISTER.

No breeder of high-class birds can afford to be without **"Cage Birds" Stud Register** hanging in his birdroom. Printed on suitable stiff card, it is ruled to hold a complete record of the breeding results of six pairs of birds; invaluable for future reference, to ensure that knowledge of one's stock so essential to pedigree breeding.

Post free, 1d. each; 4 for 3d.; 9 for 6d.

THE BREEDING CAGE LABELS.

The Breeding Cage Labels are neatly printed in sets of twelve, on perforated gummed paper, and can be torn off and affixed to the cage in a moment.

Here is a reduced fac-simile, which will serve to show their utility.

Post free, 1d. per dozen; four dozen for 4d.

CAGE No.....

COCK..... HEN.....

Issued by "Cage Birds."

Postal Orders only, where possible.

Address, **Manager, "Cage Birds," 154, Fleet Street, London, E.C.**

ILLUSTRATED IDEAS

Under this heading we shall illustrate weekly some idea useful to the bird-keeper. Readers are invited to send us particulars of any novel and practical appliance of use in our hobby, either in cage, birdroom or aviary, with a rough sketch of same where possible. Every "Illustrated Idea" used in this column will entitle the sender thereof to a postal order for two shillings and sixpence.

No. 99

A SIMPLE STORE BOX.

Sent by D. C. Vance, 12, Springfield Road, Bridgeton, Glasgow.

I enclose a simple, yet very advantageous little box, any person with a little knowledge of carpentering can make same in a very short time. Fig. (1) is showing box nine inches square over all. At (a) grooves for partitions

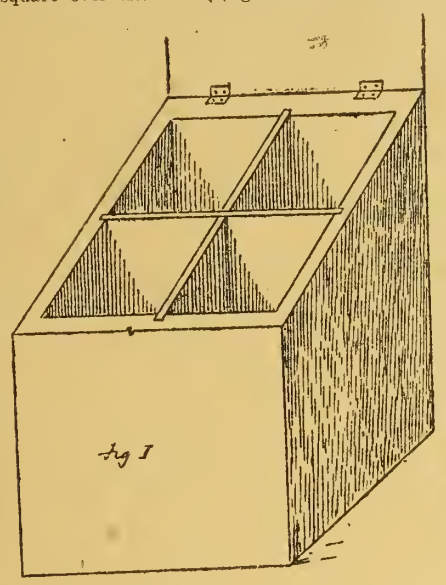


fig. (2) of which two must be made, one fits into the other, making four divisions, or more as may be required. Fig. (3) is a double lid, and is beneficial for using under ordinary lid so that the various seeds do not get mixed. This being square with a quarter cut away (as illustration) can be reversed to any direction. Then by boring a few holes in the lid, the box, when empty, can be used for carrying birds.

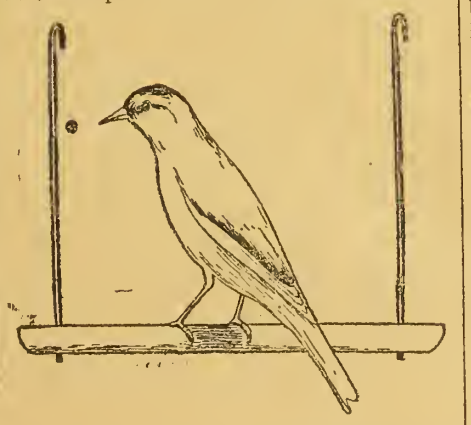
No. 100.

A USEFUL SWING.

Sent by Miss D. Burnett, 8, Albert Square, S.W.

A piece of wood about six inches long should be rounded and smoothed. Two strong pieces of steel wire should then be bent in the shape of a crook. Bore a hole at the



ends of the swing and push the two wires through, then bend over to prevent slipping out again. This is a very useful swing for wire-topped aviaries, and the birds like it better than the round swings.

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. It kills all insects, harmless to everything else.

WILD BIRD LIFE

All communications for this column should be written on one side of the paper only, duly authenticated with the name and address of the writer, not necessarily for publication, and sent to H. Norman, Editor, "Wild Bird Life," "Eastcote," Alma Road, Carshalton, Surrey, by Monday in each week. Original observations and records invited.

The Crimson Breasted Linnet—

Daily wild bird life is getting more interesting. The weather is, unfortunately, very much against any great advance in nesting and rearing of young ones. The cold winds have delayed the growth of the leaf, so that in many cases the nests have been so much exposed that they have been destroyed almost before they were finished, but there are always some that escape observation, and one may see some of the larger birds hurrying away with food in beak for a hungry family securely hidden. Other birds appear to be in no hurry to commence operations, flocks of Linnets, Starlings and Sparrows are about in the fields, many of the two latter species are nesting, but the home of the Linnet has not yet come under notice. They are exceedingly plentiful around here, some of the hedgerows bordering the cultivated fields are quite alive with them. They sing from the wind blown sprays and pass on before as one saunters up the hedgerow. Here and there a cock bird is particularly noticeable on account of his rich crimson breast, and when seen lit up by a glint of the declining sun it shines like of ball of fire. The modest brown bird can compare with the best of them now for beauty of plumage.

Cuckoo Notes.

While watching the Linnets, the notes of the Cuckoo came with the wind from the wood, or so it appeared, but the two-note song is deceiving, for the next minute it sounded in the opposite direction, but this could hardly be for there was no cover for quite a long distance, and no bird was seen on the wing; besides, the sound would hardly travel in the teeth of the strong wind that was blowing. There is nothing very brilliant nor exceptionally musical in the song of the Cuckoo, and yet how we love to hear it. The mystery bird is with us once more, and we can now look forward to sunshine and long summer days, with glorious rambles through the fields and commons with the pleasures of nesting and Nature study. With luck we should find the egg of the Cuckoo safely deposited with the Pipit's or Hedge Sparrow's, for these appear to be the birds most frequently victimised by this lazy vagrant. That a Cuckoo should lay an egg so opposite in colour to another of the same species is most remarkable, but one can hardly satisfy oneself with the belief that the blue eggs are designed especially for placing in the nest of the Hedge Sparrow, or the speckled ones in that of the Wagtail. No doubt the offspring of the bird laying the blue egg would, when it has grown to an adult, produce eggs of the same colour, but one cannot but think it is just as likely to place the

The Wily Cuckoo.

egg in the nest of a Pipit as that of a Hedge Sparrow, if a nest resembling one it was reared in was not easily located. It has been contended that a Cuckoo is able to produce eggs of different hue, but this is contrary to our knowledge of animal life. If it were possible why is it we find the egg placed in a nest containing eggs of quite a different colour? There is reasonable supposition that each Cuckoo deposits her eggs in the nest of the same species of bird and transmits the habit to her progeny.

It has been recorded that a pair of Wagtails built their nest for eight or nine years running in almost exactly the same spot, and that in each of those years they fostered a young Cuckoo. Here we have proof of the placing of the egg in the same place year after year. It is more than probable that during that time more than one Cuckoo played a part in the act, for birds in a wild state are not long lived. The daughter of the first bird would return to the place of its birth, and producing a particular style of egg deposit it in the same build of nest. In like manner it is doubtful if the Wagtails were the original pair, but either their offspring, or a survivor of a pair finding a fresh partner, and leading her to the vicinity of the old home.

Notes and Queries.

Bird's Nest in Coat Pocket.

A gardener at Sandford (Devon) on putting on an old coat which he kept hung up in an outhouse and wore only occasionally, discovered in one of the pockets a Robin's nest full of young birds.

Royal Swans Attack Oarsmen.

Local rowing men at Avenham Park, Preston, have been attacked by Royal Swans on the Ribble. Skiffs in some instances have been overturned, and narrow escapes from drowning are reported. Being the breeding season, the birds are more than usually aggressive.

The Cuckoo Fair.

Heathfield, in Sussex, holds an annual fair, in the month of April; it is called the Cuckoo Fair. The legend says that an old lady brings the bird from France and releases it at this fair; this is suppose to be the first one heard in the neighbourhood. This event is well attended, and there is no doubt some of the country people still believe in the Cuckoo legend.

Birds Singing at Night.

Contrary to the general belief, the Nightingale is not the only bird that sings between sunset and sunrise. I have heard a restless Lark warbling overhead; a Song Thrush singing a few sleepy notes from the shrubbery, and the Woodlark will frequently pipe his liquid melody on a still, quiet night. Anyone who has roamed on the marshes after sunset must have frequently listened to the chattering note of the Sedge Bird.

Fecundity of Starlings.

The countryside is getting overrun with these birds, for they have increased enormously of late years. Every hollow tree is tenanted by its pair, and sometimes more. If a tile becomes loose under the eaves it is taken possession of at once, even the Sparrows are driven out if the place is large enough for the larger birds. Many nest around the church and other large buildings, their incessant squeaking disturbing the inmates of the sacred edifice. If Starlings increase at the rate they are doing now they will soon be the most common bird in the country, for although there is considerable mortality in a colony of them, for they frequently nest together, there are always plenty reared, and it will not be long before huge flocks of grey birds are roaming the fields.

Nest on a Gravestone.

The nest of a family of Sparrows at Crediton is embedded among the ivy leaves covering a gravestone in the churchyard.

Tomtits' Workhouse Home.

For some years past Tomtits have built a nest in the pillar-box at the entrance to the workhouse at Uttoxeter, Staffordshire. They have again built their nest there, and there are three eggs in it.

Where to Hear the Nightingale.

Yearly this same question is asked by London bird lovers wishing to hear this delightful songster. The birds are plentiful in Epping Forest, and may be heard singing both day and night. This is easily reached by train from Liverpool Street, or one might walk to Wanstead Park. Some years ago they were exceedingly plentiful in and around the park, but have decreased somewhat lately.

The Nightingale near London.

"Chameleon" writes from St. Paul's Cray to the "Globe," May 5th, as follows:—The Nightingale was singing here on the night of April 22nd, and has frequently been heard since. Last night we listened to the "thick warbled strains" while we were going to sleep, and again on waking up in the small hours. It is 14 miles or so to Charing Cross, but the Nightingale frequents places so near that centre as Streatham. The Nightingale sings till mid-June.

The Little Horned Owl in Ireland.

Sir George Ralph Fetherston, Ardagh House, Ardagh, Edgworthtown, County Longford, was walking the other day in the Breany plantation in Ardagh. He says:—I was looking for Hawks, which are numerous here, and by way of adventure fired into what I thought was the empty nest of a Magpie, high up in a Scotch fir tree. Judge my surprise when a bird flew out, which I took to be a Sparrow Hawk. I fired again, and soon a fluttering little Horned Owl fell to the ground. The bird was in excellent plumage, and was evidently nesting in the old domicile of some other bird. I must confess I was sorry for what I had done, as it grieves me often when I read the long list in most natural history books of places where rare birds are seen and exterminated.

Advertisements continued from page 430.

WANTED—continued.

WANTED, any quantity of Goldfinch Mules or Linuet Mules, for cash; no rubbish wanted.—Wm. Shaw, 97, Essex-rd., Islington, London, N.

WANTED, any quantities of Canaries (any variety), Goldfinch and Linuet Mules, for cash; approval, will deposit with CAGE BIRDS.—Marsh, Freemasons' Aviaries, Pereira-st., Bethnal Green.

ALWAYS USE OUR

DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor for the *bona-fides* of either buyers or sellers. In all transactions the adoption of our Deposit System should be insisted upon.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient, plus the extra postage incurred, has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time be should communicate with the seller, stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from both parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has not been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or, if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee he paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must he properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must he a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

PREPAID ADVERTISEMENTS

UNDISPLAYED.—Three Words a Penny up to eighteen words, MINIMUM Fourpence. One Halfpenny per Word for each word over eighteen.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and, after the first eighteen words, are charged at two words a penny.

Headlines or Footlines 6d., 9d., 1/-, 1/6, according to size.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL. Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London. Terms for Display Advertisements on application.

SANDIFORD'S
FAMOUS
ROYAL RED.
10 Tons on View OF THE BEST IN THE WORLD.

Mr. W. Dormer Rishton, May, 1907.—"Sir,—Save me 112lbs. Royal Red; all my winners last year were fed on it. Mr. E. Godley Riston, April, 1907.—"Sir,—You must save me 56lbs. Royal Red. I never had such a hot colour before last season. It was splendid, as proved by my wins at all leading shows, which were: 77 1sts, 68 2nds, 55 3rds, 42 4ths, 43 vhc's, 34 hc's, 102 specials." Mr. E. Baker, Cowes.—"Sir,—Once more I have the pleasure of congratulating you on the success of Royal Red. I fed all my birds entirely on your feed. My clear yellow, which won cup and medal for hottest bird was red hot. At the Palace I won three 1sts, one 2nd, two 3rds, etc., four specials, for best Norwich. In such company I think it speaks volumes. Also was very successful at Plymouth, Portsmouth, Dulwich and Peckham, L.C.B.A., Newport, Bournemouth, Camberwell Baths, etc. Send me 1 cwt. of your new feed." Mr. W. R. Miles, Chichester (another big Palace winner), April, 1907. "Sir,—Send 30 lbs. Royal Red, 7 lbs. hot, 1 cwt. Spanish canary." Mr. H. W. Battye, Huddersfield.—"Sir,—Send me 56 lbs. Royal Red. Last season's were splendid." Mr. J. Howard, Norwich, April, 1907.—"Sir,—Send 2 cwt. Royal Red, 28 lbs. hot, to start with. They never saw such colour as last year in Norwich." Mr. A. G. Davis, Manchester, April, 1907.—"Send 112 lbs. Royal Red. 14 lbs. hot Natal." I need hardly point out that the success of Royal Red Feed has been even greater than ever during this last season. I will just point out the great show, Crystal Palace, 1907. Clear yellow, Norwich, Class of 21—1st, 2nd, 3rd, 4th, vhc. Clear Buff, Class of 18—1st, 2nd, 4th, vhc. Tick. Yellows, Class of 19—1st, 2nd, 3rd, 4th, vhc. Tick. Buffs, Class of 20—1st, 3rd, 4th, vhc. Unflighted Yellow, Class of 30—1st, 2nd, 4th, vhc. Yellow Hens, Class of 20—1st, 2nd, 3rd, 4th. Buff Hens, Class of 25—1st, 3rd, vhc. Champion Cinnamon Classes, Yellows—1st, 2nd, 3rd, 4th. Buffs—1st, 2nd, 3rd. Unflighted—1st, 2nd, 3rd. Hens—1st, 2nd, 3rd, 4th. I have only pointed out the great show of the world. Every one of above winners were moulted on Sandiford's Royal Red Feed, these being classes where you can't win without colour. I think above enough to prove to anyone that there is only one colour feed in this world; that is Sandiford's famous Royal Red Feed. Send stamp for samples.

Prices this season:—**1 lb., 2/-; 2 lbs., 3/5; 5 lbs., 7/6.**

Hot Natal, 2/- lb., 2lbs., 3/8. Note, these prices are carriage paid. Agents and Wholesalers send for this season's prices.

LIFEBELT.
Mr. Geo. Bleach, late Hon. Sec. of the Manchester and Northern Counties Ornithological Society, writes, May 10th (ordering a further supply of Lifebelt):—"I should like to add that my wife has saved several young birds this season, and I do not hesitate to recommend Lifebelt to brother fanciers." Mr. E. Bartou, 89, Ashcroft-st., St. Helens, says, "I am glad to tell you Lifebelt is the best food I have ever had. I am rearing several young birds with it." "Lifebelt" and feeder, 2/6. With each tin I send special instructions to induce hen to resume feeding. Pamphlet for postcard.

If the poor little beggars feel queer in their tripe-belt,
Just keep 'em quite warm and cram 'em with "Lifebelt."
Give 'em a meal or two, let the hen have a rest,
They'll soon be all right when you put back the nest,
And the vacuum's gone from their tripe-belt.
(To be continued in our next.)

W. GARTHWAITE, 49, Hare St., GRIMSBY.

BOOKS.
THE HYGIENE OF BIRD KEEPING.
By W. GEO. CRESWELL, M.D., L.R.C.P., F.Z.S.
Price 1.1, post free from CAGE BIRDS Offices,
154, FLEET STREET, LONDON, E.C
OPINIONS OF THE PRESS.
LANCET: "This little book will be welcomed by all lovers of birds, whether ornithologists, aviculturists, or the owners of a single pet songster. The author deals with his subject in a thoroughly practical and scientific manner, and the results of his experiments prove the fallacy of some rule-of-thumb theories. . . . The book is well illustrated."
COUNTRY LIFE: ". . . a surprising amount of really valuable advice for all who keep small birds, whether in cages or aviaries. . . . Those who approach the subject with an open mind must admit the cogency of the author's arguments; and these, backed by a very wide experience at first hand, will prove hard nuts to crack for many of the champions of the 'good old methods.' . . . We venture to think that his experience will pave the way for a revolution in the methods of bird keeping in the near future."

IMPORTANT NOTE.
Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together and counted as one Advertisement.

STOP!—Look at this, it will interest you, You want good sound healthy reliable birds. I can send you them at reasonable prices. My stock of selected red-breasted singing Linnets is undoubtedly the largest in England (no Foreign sickly rubbish here). Over 1,000 sound healthy birds to select from. Cock Linnets, 1/- each, 3 for 2/6, 24 for 15/-; extra large birds, for show or muling, 1/6, 2/-, 2/6 each; hens, 6d., 9d. each; cock Goldfinches, 2/6, 3/-; hen Goldfinches, 1/-, 2/- each; travelling cases, 2d. each extra. Do not be gulled with rubbishy birds. Let me send you the birds you require on seven days' approval, at my risk; illustrated price list post free.—Miss E. L. Storey, Practical Bird Specialist, Crowle, Doncaster.

IN OUTDOOR AVIARIES.

We can supply the following from our own outdoor aviaries, all in breeding condition:—Siberian Bullfinches, British Bullfinches, Greenfinches, Bramblefinches, Goldfinches, Chaffinches, Linnets, Yellowhammers, Redpolls, and Canaries.
Live Stock Stores, Station-sq., Harrogate, and at Hull.

MATTHEWS, LINNET KING.

To Linnet Singers and Mule Breeders.—Gentlemen, do you want a real good Linnet for singing, showing, or Mule breeding? If so, send direct to me, as I have the finest lot ever seen. I have sent them all over England, and they are acknowledged the largest and keenest singers you can get. Linnets I have sent out are winning for their owners in showing and contest singing, and have scores of testimonials from my customers who have young Mules this season with my special muling Linnets. So if you want to breed Mules, try one of mine; they are all good large, healthy birds, and every bird sent on approval at my own risk. I have the largest stock of singing Linnets in England. Some real toppers, in full song, all been taught under my well-known champions, been caged since November, steady, real bargains, 2/6; special birds, 3/-. I have also the finest stock of selected birds ever seen, all guaranteed ready for immediate mule breeding. These are extra large Linnets, with good nut-brown backs, blood-red breasts, blue beaks, in full wild song, bargains, 2/6 each. Those intending Mule breeding should send at once for one of these specially selected Linnets, and you will never regret it. Also a sample packet of my special mixed wild seed, and instructions how to feed for singing and Mule breeding sent free with every order. My special Linnet mixture, sold at four packets 1/-; also my special wild seed mixture, four packets 1/-. No Linnet fancier should be without it, as it is the best you can possibly get to keep your birds in condition and song. Everybody is welcome to inspect my Linnet buildings and hear my birds sing. Over 200 in stock, and I send all my birds out on seven days' approval at my own risk; no delay; birds sent day after order. Postcard before birds. Cash or deposit.—Matthews, Bird Catcher, 44, George-st., Hyde, Cheshire.

HARRY ALLEN.

Champion of all champions.—As usual, first again this week, first and second last week. If you want some good birds, send to me, as I have supplied birds which are at present winning prizes both at contests and shows. Mr. Fisher, of London, secured the Llandudno, with bird first time shown. A gentleman in Cleveland has won a cup with one of my birds for singing. There is no doubt about it, I have the finest lot of Linnets ever seen or heard. Big bold cock Linnets, well pencilled, show white on wing, sure mulers, 2/6 and 3/-; extra picked birds, 3/6 each. Cock Linnets, singing beautifully in a polished singing contest cage, with a packet of my special mixture, 4/6 the lot. Cock Linnets, singing grand in a fancy back cage, 4/-, fit for any gentleman's room. Young house moulted cock Linnets, singing hard and proud, fit for show and finger tame, with singing cage, 7/6, 8/6, and 10/6 each. I have two singing, with wings down, mad proud, 15/- and £1 each. Cock Bullfinch, finger tame, singing gaslight and daylight, in show condition, 4/6. House moulted cock Goldfinch, white legs, singing hard, bred Mules last year, and guaranteed to breed this year, beautiful blaze, bars, etc., stands well, and can win in good class, 15/-. Linnet and Canary Mules, singing hard, in box cage, 12/6, honestly worth £1, for showing. Cock Greenfinches, fit for show, and sure mulers, good colour, and the largest that can be possibly got, 1/- each, three for 2/6. I can highly recommend the above. A splendid Redpoll, as big as a Linnet, grand red breast, years since I saw one to equal it, price 2/6, in fancy cage, 4/-; this bird will make a big winner; showmen specially invited to see it; dirt cheap. Contest cages, 1/6 and 1/- each. Contest cages, London style, six for 4/6, one dozen 8/-. Beautiful Canary cages, with stained glass round, polished, complete, with sand drawer, seed and water troughs, 2/6; real bargains, money honestly returned if not satisfied. Inspection invited. Testimonials with every post. All my birds are on seven days' approval, cash or deposit; 30 years' experience. Gentlemen, I wish to draw your attention that my birds have made a name for me by winning all before them, and proving to you that they are the real champions. I have no agents, so beware of imitations, as I see there are a few. Send to the original Linnet firm, and you will never regret it.—Harry Allen, 42, Brown Hill-cres., Harehills-lane, Leeds.

Crests, large birds, feather to beak ends, 12/6, 15/6, 20/-, 30/-; hens, 7/6, 10/-, 15/-. Best bred hens, 4/6, 5/6, 7/6, 10/6. Pairs selected for amateurs to breed winners, 10/6, 12/6, 15/- upwards.—C. Baker, Herbert-st., Bedminster.

FOR ONE MOMENT

Just consider what it means to you when selecting birds for your breeding stock to get the best possible birds at the most reasonable prices. If you have this desire I would remind you that Miss Storey has the best collection of birds in England, birds of the proper type, in breeding condition, at reasonable prices. Do not be misled with unshapely rubbish, when you can have the very birds you require at the same price, carriage paid to your address, on seven days' approval and no risk whatever, until you are perfectly satisfied with your purchase. I yearly sell many thousands of birds, and give every customer satisfaction. I guarantee to please you if entrusted with your order. I am now offering exceptional good value in typical Norwich cocks, 7/6, 8/6, 10/6, 12/6, 15/-, 20/-, and 25/- each. Hens, 4/-, 4/6, 5/6, 6/6, 7/6 each. Matched pairs, 10/6, 12/6, 15/-, 17/6, 20/- upwards. I receive many thousands of unsolicited testimonials, which are all open for your inspection. To make sure of satisfaction, send me your orders for whatever Canaries or British birds you require. Full new illustrated list post free. All Canaries sent carriage paid, on seven days' approval, at my risk. Travelling cages, 2d. each. Note the old and only address: Miss E. L. Storey, Bird Specialist, Crowle, Doncaster.

IMPORTANT NOTICE.

Notice, another consignment of St. Andreasberg Rollers has arrived; they are constant day and gaslight songsters, with all the sweetest, softest, and most musical changes of song; water-bubbles, runs, silvery trills, piccolo, harp, and deep bass rolls, etc.; all on six days' approval on receipt of P.O., or deposit the amount with the Editor; 8s. 6d., 10s. 6d.; perfection. Schoolmasters, 12s. 6d., 15s. 6d., 18s. 6d., 21s.; inspection invited any time.—William Shaw, 97, Essex Road, Islington, London, N.

POSTAL ORDERS PLEASE.

Owing to the new Post Office Regulations respecting the use of stamps upon Postal Orders, we are reluctantly compelled to state that in future our rule re **sending Postal Orders as far as possible instead of stamps** *must be strictly enforced. Advertisers unable to obtain Postal Orders must remit an extra halfpenny with every four penny stamps.*

THE GREATEST BIRD SHOW ON EARTH !!!

Eastern Counties Aviaries, Aylsham Road, Norwich.

HEAD QUARTERS FOR ALL HIGH-CLASS CANARIES, FOODS, ETC.
Every bird guaranteed untried and in breeding condition. All sent on approval. Write for price list, post free.

Postal and Telegraphic Address:—

MACKLEY BROTHERS, NORWICH.

The Distinguished Patronage of H.I.M. The Empress of Germany and The Sultan of Turkey. Awarded 9,000 Prizes.

BE IN TIME.

If you require a high-class Roller, I must urge you to order early, as I have only 500 of these marvellous songsters for disposal; when these few are sold I cannot supply any more until next season. These are not a lot of wasters picked up in German markets, but the whole stock of one of the most noted Roller breeders. Every bird is cheap at 20/- each; but as I have bought them right I offer these high-class birds at about half their value. Genuine highly trained cocks, in full song, by day and gaslight, 9/6, 10/6, 12/6, 15/- each. Pure Roller hens, of same breed, 3/6, 4/6, 5/6 each. For loud songsters that will make the place ring with their song, try my Hartz Mountain Rollers (only a few left), cocks, in full song, 6/6, 7/-, 7/6 each; matched pairs, 9/6, 10/6, 11/- pair. I have a lot of selected Yorkshire and Norwich songsters, 7/6, 8/6, 10/6. Matched breeding pairs of Rollers, Yorkshires, and Norwich Canaries at 10/6, 12/6, and 15/- per pair. See page 429 and previous issues for genuine unsolicited testimonials. All I ask is to let me send you one of my birds, carriage paid, on seven days' approval, at my risk, and you will be convinced that the quality of the bird is the best, and the prices are the most reasonable. Send postcard for my new illustrated list. Neat travelling cages, 2d. each; all birds carriage paid, on seven days' approval.—Miss E. L. Storey, Importer and Breeder, Crowle, Doncaster.

Scotch Fancies.

FOR high-class Scotch Fancies see my free list.—Rudd, Bird Specialist, Norwich.

SOME Northern Beauties.—Exquisite coloured plate of Belgian and Scotch Fancy Canaries, post paid on receipt of four penny stamps.—F. Carl, CAGE BIRDS Office, 154, Fleet-st., London, E.C.

HIGH-CLASS birds, first and second crosses from winning strain, good, sound condition; moderate price; approval.—Rosebank Cottage, Newmilns, Ayrshire.

SCOTCH Fancies.—Two good buff cocks and one clear yellow hen, good birds, wish to clear, sell cheap; approval three days; stamp, particulars.—C. Hunt, 6, Stoneville-st., Cheltenham.

YOU
TO BE
THE JUDGE

I will abide by your decision, and leave it to you whether you WILL or WILL NOT buy the Bird or Birds you desire from me—

A Canary and Bird Specialist of nearly 50 years' standing.

All I ask is for a fair verdict, and for you to act accordingly.

In order that you may weigh in the balance the merits of my Cage and Pet Birds, I will send for A WEEK'S TRIAL any bird that you may select from my Catalogue, entirely leaving you to be the judge of its merit, before finally accepting your money.

My stock is a most extensive and exhaustive one, and ready to meet every wish that can be desired in the Bird Fancy line. Every bird I sell I can guarantee to be of the finest strain and purest breeding.

Send for my Catalogue, which gives a full and complete list of my birds, enclosing two penny stamps to cover postage; and you should certainly see this before purchasing Cages, Aviaries, Foods, Medicines, and any Birdroom Requisites you may require,

E. TAYLOR,

Bird Specialist,

3 & 7, THORNTON ROAD, BRADFORD.

IMPORTANT NOTE.

Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together and counted as one Advertisement.

IF YOU WANT

ODD BIRDS or PAIRS

in the following varieties, state requirements with stamped addressed envelope, or send for

FREE EXTENDED PRICE LIST;

also please refer to my advertisements under the different headings in this journal of last week (May 11th), as all hold good, and although I know many have been disappointed because they have not only had to wait, but have been unable, in many cases, to procure the birds so freely advertised at all.

Birds in stock:—Crests and Crestedbreds, Plain-headed Norwich, Yorkshires, Lancashires, Dutch Frills, Belgians, Scotch Fancies, Light and Dark Goldfinch Mules, Yellow and Buff Light Muling Hens, Dark Muling Hens, etc., etc.

All Amateurs should try my Special Matched Pairs of Prize-bred Norwich Plainheads at 12/6, 15/-, and 20/-. Crested ditto, 15/-, 20/-, 25/- and 30/-. Yorkshires, 12/6, 15/-, 20/-. Ready for immediate breeding.

ALL BIRDS ON APPROVAL.

TRAVELLING CAGES, in all cases, 3d. extra.

"EGGERTINE."

It is the best, purest, and greatest bone and muscle forming food ever known, as the analytical reports of most eminent authorities prove. It will bring hens into sound and robust condition for breeding as nothing else will. This during the past twenty years has been proved by thousands. It is a genuine egg food made with fresh laid English eggs, with white, of course, included (and NOT foreign preserved yolk of egg) with other valuable properties combined. Tins, post free, **1s. 3d.**; large size, **2s. 6d.** There is a saving in the larger size.

W. RUDD,

THE Bird Specialist,

NORWICH.

Telegrams—"CANARIES, NORWICH."

JOHN D. HAMLYN,

221, ST. GEORGE'S ST., LONDON DOCKS.

AFRICAN GREY PARROTS.

To bird-dealers in London and suburbs.—You can be supplied with these grand and best talking Parrots at very lowest prices; personal delivery. See what you buy.—Wright, 100, Vicarage-lane, Stratford, E.

COKERNUT HUSK NESTS.

One ounce of fact is worth one ton of theory. Just notice what the Crystal Palace judge of cages and appliances says—"Mr. Swaysland, Brighton, to Pearson, Greenwich. 3 doz. Husks safely to hand and THEY GIVE EVERY SATISFACTION." Now, you who tried the useless Husks, try a sample set of 3 sizes, 1/-, 3/-, 4/-, 5/- doz., and be at the end of your worries. **Cokernut Shell Nests** for Foreign Finches, etc., 4/-, 6/- doz.; sample pair, carriage paid, 1/-. **Box Nests** for Cockatiels, Parrakeets and Parrots, the only satisfactory one so testimonials say, 1/- each; varnished, 1/6. **PEARSON, The only Nest Specialist, GREENWICH.**

BOOKLET FREE.

FINEST Talking Parrots. I only deal in Parrots that will make first-class talkers; no rubbish. I am willing at all times to send my Parrots on four weeks' trial and three months' talking guarantee. Why? Because all my Parrots are young, strong, and reliable. My lifetime has been spent among grey Parrots, both at home and abroad. I guarantee every customer every satisfaction. Grey Parrots are my special fancy. I have trained them, know their wants, and can give every purchaser a bird that will please him in every way. I can supply grey talkers, not thinkers, that will say almost anything, at reasonable prices. Before you purchase a grey or green Parrot, send for my Booklet, entitled "Talking Parrots." All my birds are sent on four weeks' trial, at my risk. Send postcard for catalogue.—Mrs. Forster, Princes Park Aviarics, Violet Street, Liverpool.

PARROT CAGES.

Notice.—We are the largest Parrot cage manufacturers in the kingdom. Send for list; trade supplied.—Flanagan and Son, 425, Scotland-rd., Liverpool. Telephone 0412 Royal.

PARROTS. PARROTS.

Parrots. Parrots. The largest wholesale place in the world for these splendid birds. We supply dealers and hawkers in nearly every city and town in the British Isles and abroad; for price and particulars apply Wright's Trading Menageric, 43, Park-rd., Liverpool.

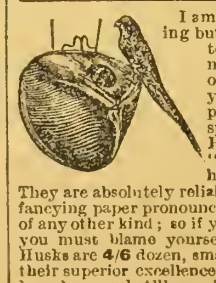
PAYNE & WALLACE, The Little Zoo, BATH.



I am not a bird dealer and sell nothing but husks, but I am not too busy to even write out an advertisement, so that small and large orders have same attention. My young birds are all sold and promised, but I have some splendid Budgerigar Breeding Husks in stock, the same "Improved Secure" quality I have sold for the last 16 years. They are absolutely reliable and unbreakable, and every fancying paper pronounces them superior and far ahead of any other kind; so if you are gulled by new beginners you must blame yourself. The "Improved Secure" Husks are **4/6** dozen, smaller quantities **5d.** each. For their superior excellence over other kinds they always have been and still remain first favourite. I guarantee I have wired and sold more "Secure" Husks than all other makers combined. Few Cockatiel box nests **1/6** each.

HARPER, Upper Villiers Street, WOLVERHAMPTON.

Foreign Bird Queries continued from p. 458.

Grey Parrot Thin and Weak.

The bird has been ailing for some time. It is fed as advised in "C.B.," but it will not eat bemp. It is eating well, but is very thin and weak, and its plumage is in very bad condition (feathers enclosed). I have given magnesia and chemical food. Is there anytbiug else I can do for it?—G.D.

G.D.—It looks almost as if your bird was wasting away. Let it have as much exercise as possible, plenty of fresh air without draught. Continue to give the chemical food; make its drinking water the colour of pale port with same; keep a sharp look out for constipation, and, on the first signs of this, make its drinking water quite saline with Epsom salts, for one day, or till relief is given. Let it have as much ripe fruit as it will eat, also green food, cuttlefish, plain biscuits, dry crust of household bread. Keep its cage strictly clean and the bird out of all draught. Well soak its plumage with quassia solution twice a week; if there are any parasites troubling the bird it will eradicate these, and if, as I strongly suspect, the bird is chewing its plumage, this will make it distasteful to it. With the warm weather coming, it can have plenty of open-air treatment; at the same time its cage should be so placed that there will not be a current of air blowing through it; it is not difficult to arrange this. Do not give the chemical food once a day only, but let the water with this form its constant drink. Shall be interested to hear how the bird goes on.

Breeding Budgerigars.

My hen, which was egg-bonnd, is much better, but still queer; is rather thin and dropping her feathers. Can you help me further? I have a young male, bred last September. Would he mate if I got a hen for him?—A. BAKER.

A. Baker.—You must keep this hen caged up by itself for at least another month—at least, do not let it have a mate till it is in fine feather and is strong again. Keep up the chemical food, but be on the watch for constipation, and, at the first signs of this make the drinking water quite saline with Epsom salts for one day, or till relief is given. Let her, and all your other birds, have a plentiful supply of grass in flower (i.e., grass in the ear). Re your other birds, let there be at least double the number of husks that you have pairs of birds. Yes, by all means get a mate for your young male, but I recommend you to procure some from a different source to that of the parent birds. I should think your ailing hen ought to be fit again in from six to eight weeks.

Green Parrot.

(1) What kind is it? (2) Will it make a good talker? (3) How must I feed?—J. K.

J.K.—(1) It is the Indian Ring-necked Parrakeet (*Palæornis torquata*). (2) Most individuals of this species make fair talkers, and articulate words and short sentences, and they are excellent mimics; some individuals are also good screamers, but once broken of this objectionable habit they are entertaining birds. For directions re teaching to talk, see reply to "E.H.V." in this issue. (3) See reply to "E.H.V.," and if so treated your bird should do well.

Cockatoo in Bad Plumage.

My bird does not seem to moult right; the feathers only come to pens and then seem to break away. It appears in good healtb otberwise. How must I treat.—F.H.

F.H.—It is very probable it is the bird's diet which is largely at fault, it mostly is in such cases. Please repeat query next week, and give full particulars as to how you are dieting and treating the bird. In the meantime, for one day only, make its drinking water quite saline with Epsom salts, and let it have only this to drink for the day. On other days make its drinking water the colour of pale port with Parrish's Chemical Food. Keep up regular supplies of ripe fruit, green food, and cuttlefish. Keep its cage strictly clean. Also soak the bird's plumage with quassia solution every third day, keeping the bird strictly out of draught till dry.

DULWICH & PECKHAM C.B.S.

A Successful British Bird Show.

That enterprising young club, the Dulwich and Peckham C.B.S., which now numbers 150 members, held its Annual Show of British Birds on Thursday, May 2nd, at headquarters, the Herne Hotel, Peckham Rye, and the venture proved of a most successful character from every point of view; this was a good augury for the Young Bird Show, fixed for July 4th. It furthermore enabled the members to get into their stride, with a view to their eagerly-anticipated country ramble, fixed for to-morrow (Sunday). A well-known bard once wrote, "It is not in mortals to command success," but Mr. W. Hodson, who is one of the most painstaking and genial of hon. secretaries it is possible to meet, did his utmost to deserve it, and he is to be heartily congratulated upon his efforts having been fittingly rewarded. He received yeoman assistance from Mr. G. F. Woolhouse (chairman), Mr. A. E. Rogers, Mr. E. S. Lugg, and other members of the committee. The staging, which had been put up round the spacious concert room, was very tastefully draped with red cloth, and when the multi-coloured birds and cages were placed in position, the scene was indeed a very pleasing one, and our only regret was that Mr. Norman, your clever artist-in-chief, was not present so that a life-like picture of the room could have been reproduced in CAGE BIRDS. The quality of many of the specimens staged was indeed an eye-opener, and, while it is, of course, always invidious to particularise when the "class" all round is so exceptionally good, we would draw especial attention to the Thrush, Goldfinch, Bullfinch, and Linnet which came out top hole in their respective classes. These were indeed real gems, and would hold their own in "blue riband" competition at the Crystal Palace. We were somewhat mystified by the appearance in the catalogue of the letters "R.R.R.," and thought they must refer to some class of rare feathered specimens, but we failed to trace any "rara avis," and were informed the cryptic letters had nothing whatever to do with birds, but stood for "Roger's Rapid Renovator," a polish discovered by the gentleman whose name it bears, which will, it is claimed, turn old furniture into new—in appearance. It is also said to be very handy in the bird room, as is not only keeps the cage spick and span, but it drives red-mite away. Mr. W. H. Vale judged, and his awards appeared to give general satisfaction. He afterwards explained to the assembled company the good and indifferent points of the various exhibits, and his remarks were followed with wrapt attention. He was subsequently plied with numerous questions, which he satisfactorily answered, and, on the proposition of Mr. Woolhouse, seconded by "mine host," Mr. W. Goodwin, a hearty vote of thanks was accorded Mr. Vale, which he suitably acknowledged. Amongst the large number of fanciers who attended was the veteran, Mr. G. Garlick, whose presence reminded one of many stirring bygones in the halcyon days of the Fancy, and, judging by the pleased expression on his jovial old face as he adjusted his pinc-nez, the "pink-pink" of the Chaffinches and the merry notes of the Linnets were recalling to the old campaigner the recollection of many a pleasant afternoon spent in the country amongst the feathered songsters in the long ago. Mr. Rogers is once again to be heartily complimented upon the promptitude with which he turned out the catalogues with awards, these being in the hands of the company within five minutes of the close of judging—a very smart performance.

The following are the awards:—GOLDFINCH OR BULLFINCH, HOUSE MOULTED (8): 1, spl, Botting (Goldfinch); 2, Carter (Bullfinch); 3, Meredith (Goldfinch); 4, Rees (Goldfinch); vhc, Richardson (Bullfinch hen); hc, Lugg (Goldfinch); c, Fisher (Bullfinch); Johnson (Goldfinch). GOLDFINCH OR BULLFINCH, FIELD MOULTED (5): 1, Meredith (Bullfinch); 2, Johnson (Goldfinch); 3, Carter (Bullfinch); 4, Lugg (Goldfinch); vhc, Waterman (Bullfinch). LINNET, REDPOLL, AND TWITE: 1, spl, Carter (Linnet); 2, Hathaway (Redpoll); 3, Johnson (Linnet); 4, Fisher (Linnet); vhc, Botting (Redpoll); hc, c, Richardson (Redpolls). GREENFINCH (4): 1, Johnson; 2, Sidgwick; 3, Harry; vhc, Botting. A.O.V., SEED-EATING (7): 1, Botting (Hawfinch); 2, Sidgwick (Reed Bunting); 3, Johnson (Siskin); vbc, Butt (Pied House Sparrow); bc, Harry (Chaffinch); c, Waterman (Chaffinch); Wall (Bramblefinch). A.V., INSECTIVOROUS SMALL: 1, Hathaway (Blackcap); 2, Carter (Wheatear). A.V. LARGE: 1, spl, Hathaway (Song Thrusb); 2, Lugg (Starling); 3, Rees (Song Thrush).

THE LATE MR. GEO. LAWSON.

Allow me spaee to correct an error I made in my notes on the death of Mr. George Lawson (late of Culross). I said Mr. Lawson was Scotland's premier breeder and exhibitor of Scoteh Faney Canaries from 1887 to 1902. Should have been from 1887 to 1892. He won the Dundee Cup three years in succession (1890, 1891, 1892) with his old champion buff eock, a bird that was perfection in every part (besides other cups well known to other fanciers). I have never seen his equal yet. His yellow piebald cocks (ineluding Martin's, Glasgow) and the yellow piebald hen (Wright's, Greenock), buff hen and buff piebald hen, all birds that won firsts in their classes, are birds well to be remembered, the writer sold him the mother. All his birds were eagerly sought after, either to get a show bird or a stock bird. He was a gentleman that was not hard to deal with in money matters. In matching his birds he was very particular, and would pay a long price for a bird to suit him; from £10 to £15 he often paid for such. In crossing with the Belgian he was very successful in producing birds that could hold premier honours at any show. The manner in which his birds were kept in first elass order when showing was the general talk, although out nearly every Saturday from Octoher to New Year. His bird room was above his bakehouse, and was a treat to see. In it a nice temperature always existed night and day, with a good supply of pure air. He was very particular in feeding his birds when breeding, giving egg, and a mixture of seeds sparingly, and tender dandelion leaves, whiteheads, and sceded chickweed were his principal green foods. He often reared from fifty to sixty birds in a season. Space will not allow me to say all I might do regarding the champions he bred, which are well known to the fanciers of his day. Never of a robust constitution, but wiry, of a kindly disposition, respected and esteemed outside the Faney, a man of great intelligence, being a great reader, he could talk on many subjects, but I think none gave him greater pleasure than a bird talk. Many had the writer and his brother, either here or at Culross, with him. As I took a last look on him in that upper room in Stenhousemuir, my feelings nearly overcame me, and as we laid him to rest in that beautiful cemetery at Larbert, I could only say—

Sleep on, dear friend, sleep on
Until the resurrection morn,
When Christ shall thee awake
And take thee home.

He leaves four sons and three daughters to mourn his loss. His wife pre-deceased him threo years ago. I would offer to the family the sympathy of the whole Faney in the hour of their bereavement. McWatt, Bonnybridge, and Carlan, Carmelon, besides the brothers Hogg, were the fanciers present at the funeral.

W. D. HOGG.

GUARANTEED CLASSES AT THE CRYSTAL PALACE SHOW.

I am reluctant to again refer to the matter of the classes I guaranteed at the late Crystal Palace Show, but a long diatribe on the point from Mr. E. G. Wright, of Edinburgh, leaves me no alternative. That Mr. Wright is anxious to create a disturbance is now apparent. I will not go over in detail the long series of falsehoods he has seen fit to circulate, but content myself with touching upon three of them. Wright endeavours to draw the inference that my attitude towards him is that of annoyance because he refused to act as "sole representative" of CAGE BIRDS. He charges me with having made him an offer and "cutting" him after he refused it.

Let me say, in reply, that I have never at any time made Mr. E. G. Wright an offer for his services which might be construed according to his professed interpretation of it, and as he bases his statement concerning that offer upon my letter to him of August 27th last let him print the whole of that letter without any excisions.

Secondly, I would like to say that since the personal interview to which he refers I have not only conversed with him, but rendered him a favour at the Palace Show, for which he expressed himself as being "greatly obliged."

Thirdly: The very moment I read Rule 2 in the Palace Show schedule, while I did not in any way, and do not now, admit any legal or moral liability for the payment of the balance, I instructed the Palace Show managers to pay over, on my behalf, to all the exhibitors concerned, *not even excepting Mr. Wright*, the balance of the prize money, amounting to some seven pounds odd. Out of all the exhibitors concerned only one refused to accept the balance of the prize money so tendered, and that one was Mr. Wright, who demanded it as his legal right, and who consequently gave me no option but to instruct the Palace management to withhold payment from him in order that he might put the legal claim, upon which he was so insistent, to the test.

It is, therefore, a distinct falsehood for him to say that I have singled him out for omission; on the contrary, it is he who, for his own purposes, which are sufficiently obvious to anyone with half an eye, has singled out himself to be a martyr and object of sympathy. Truly the next thing to being ill-used is to wish to be considered so.—F. CARL.

We have received several letters from exhibitors personally concerned in the above business, all couched in sympathetic and friendly terms. In marked contradistinction to the attitude of Mr. Wright, the sentiments of that fine old breeder of Scotch Fancies, Mr. Robert Willison, deserve publishing:—

49, Stanley Road,
Barrow-in-Furness.

Mr. Carl,

Dear Sir,—I have just returned my prize money to Mr. L. Brown, secretary, as I consider it is very hard on you. I know you just guaranteed the classes, to pay for them as any secretary would do, for the sake of seeing the classes standing, and I think if the Scotch exhibitors would send up more entries to fill up the classes instead of just sending up one or two entries, it would be much better. I am sending this money back as I believe Mr. Wright is going to make a test cast of it, and if he does, this is to go towards your expenses. Wishing CAGE BIRDS every success,

I remain, yours truly,
ROBERT WILLISON.

Needless to say we have no intention of availing ourselves of the generosity and public spirit of Mr. Willison or anyone else, and any such test case (when brought) must fall upon our shoulders alone. Mr. Willison's prize-money and the prize-money of two exhibitors, which has also been returned by them to us, animated by the same principle, will be gratefully rejected. That well-known Northampton Crest fancier, Mr. H. Mills, has a few words to say on the same subject:—

I can quite see how you were mistaken, and should not have taken any further notice. The money has come as quite a surprise. I hope I do not get served any worse in the Fancy in the future. I could, if I liked, mention three large open shows that have not sent their specials out yet. It's about time, I should think. H. MILLS.
27, Duke Street, Northampton.

Sketty, Swansea.

F. Carl, Esq.,

Dear Sir,—I received your kind letter, and note what you say about half prize money at last Palace Show. I have received the balance of same from secretary, and beg to tender you my best thanks for same; also for your good wishes, and I think, after reading your explanation, you have acted very honourably in paying out the remaining prize money. Yours sincerely,
D. A. S. LONGDEN.

And, in conclusion, a fellow-townsman and friend of Mr. Wright's sends a personal letter, from which we may, just by way of conclusion, extract the following:—

We are all interested in the half prize money at Palace business, and Mr. W. is everywhere condemned. He is an insurance agent, and can take a lot of bluffing. Hereabouts we only laugh at his writing. He tried to get Mr. Cairns to his way of thinking, but it would not work. I suppose Mr. C. has returned cheque for balance of money. At least, he was recommended to do so, and I feel sure he would.

SIR,—I see that there is another effusion emanating from Mr. Wright, which, as usual, is far from accurate, and on one or two points I must correct the wrong impression that might be created. The rest of his letter is merely a tilting at you, Mr. Editor, which I can well leave to you to deal with. Mr. Wright lays the flattering unction to his soul that, had it not been for him, I should still have been turning a deaf ear (another inaccuracy) to all applications! He is not correct when he says that all "claims" have been paid, for only two claims were made—Wright's and another; but all exhibitors in these classes have been paid full money (with, of course, the exception of Mr. Wright), you, Mr. Carl, generously forwarding me a cheque to enable me to do so, and from the various acknowledgments I have received I append one or two extracts, from which it will be seen that, despite the "multitude" (!!!) of letters that Mr. Wright has received, all the exhibitors do not see eye to eye with him. The first one (and this, of all places, from Edinburgh itself) says: "Yours to hand with cheque, which I have very much pleasure in returning. At first I admit thinking we should have full prize money, but not after I heard the right way of it, and I can assure you that I was not expecting any more than what I have already received." (I say all honour to such a true fancier!) The next exhibitor called upon me personally the next morning and said he was not at all easy in his mind in keeping the money, as he clearly was not entitled to it. Another writes: "It came as quite a surprise. I could see nothing unfair in what you did as regards prize money. I could see the mistake, and only hope I do not get served any worse in the Fancy!" I do not put names to these letters, but I enclose separately their names, so that you can see, Sir, that they are exhibitors who are better known in the exhibition world than Mr. Wright. These few extracts and my own explanations will, I am confident, be amply sufficient for all fanciers to clear my committee from all suggestion of breach of faith. Personally, I should not have troubled to write another letter to clear any imputations made against myself, for I defy anyone to prove, after several years of secretarial duties—and Mr. Wright least of all—that I have ever been guilty of discourtesy alone, to say nothing of any breach of trust; and I am quite content to leave my good name with the hundreds of fanciers all over the country with whom I have been brought into contact. Mr. Wright says he is sure that the Palace Show will suffer in entries because of this. On the contrary, however; for if the Scotch exhibitors are possessed of that commonsense with which I credit them, then they will easily see through the paltry vapourings of Mr. E. G. Wright and estimate them at their true value, and not let them bias the good relations that have always existed between them and ourselves. In conclusion, I am quite content to leave myself in the hands of the Fancy. My past record is quite sufficient answer to these paltry insinuations of breach of faith, discourtesy, etc. H. LAMBERT BROWN.

P.S.—Since writing the above, yet another letter has come to hand, returning the cheque sent for similar reasons.

I have had dozens of replies to my advertisement, and could have sold three times the number of birds I had for sale. CAGE BIRDS is a wonder. It must be worth pounds to many a fancier and novice. A grand pennyworth—the best in the world!—W. E. WATTS, Horfield.

Kindly thank all who answered my advertisement. They were so numerous that I could not possibly reply to all. I never dreamt there would be a quarter the enquiries there were. CAGE BIRDS is the paper to advertise in—there's no mistake about that.—AMOS HOLYOAKE, Kilworth.

The fanciers here seem to be doing very well. There are a good number of young birds on the sticks, both Canaries and Mules. Although the weather was very trying, the eggs hatched out well, and there are all prospects of a successful season, if things continue as they are.—WILLIAM J. ROSS, Inverness.

Mr. H. Hay, 29, Craig Street, Long Eaton, is anxious to form a Cage Bird Society in that town. He already has the names of 15 fanciers who would be willing to become members, and would like to hear from any others in the neighbourhood who would be willing to assist in the formation and working of such a society.

A fortnight ago I read an advertisement whilst having breakfast on the Friday morning that there were four Roller hens to sell. I wrote at 11 o'clock, posted it, the address, "Bacup," Lancashire, asking if they were cold-room bred, and the following morning I received a letter saying the birds were sent off for me, although a complete stranger, who had never heard the person's name before. They arrived in due course, fine birds, and were paid for on Monday. Does not this reflect credit on the seller that he could trust an entire stranger? Cases like this, I think, are rare. It would be a better world if we had more like this advertiser.—ANDREW M. FIRTH, Leeds.

About 12 months ago I was in one of our local newsagent's shops—Mr. Thos. Duncalf's, Uttoxeter Road, Longton—when I saw "C.B." Looking it through, I found very good information respecting the keeping of birds. Well, I commenced; found it a very interesting hobby, and have become so interested that I have just enlarged my aviary by about 6 ft. in length, and keep between 30 and 40 Finches, Linnets, Redpolls, etc. It is a treat to sit, have a smoke, and listen to the mixed singing; it is like being in a little wood.—SERGT. G. DOWLER, Longton.

"Impossible to equal for clearness, utility, completeness and money's worth."

"CAGE BIRDS" BREEDING ROOM REGISTER

AND

BIRD KEEPER'S ACCOUNT BOOK.

(COPYRIGHT.)

COMPILED BY G. E. WESTON.

The Latest Publication for the benefit of keepers of cage birds. Is framed on novel lines and contains many entirely new departures. Is absolutely indispensable to everyone interested in the hobby.

It has been represented to us that while our Stud Register Cards are admirable for the purpose of hanging up in the bird room to make notes on of the season's proceedings, something of a more substantial nature is desirable for the purpose of keeping a permanent record of the progress made.

To meet this need we have had compiled "Cage Birds" **Breeding Room Register and Bird Keeper's Account Book,** which offers in a handy form a means of keeping—

The complete pedigree and description of every bird in one's room.
A full record of the season's breeding experiences.
An account of every young bird reared, and how it was disposed of.
A register of one's doings at the shows (the most complete and useful yet devised).
A cash account for the year.
A profit and loss account of the season's proceedings, and a balance sheet showing how much one has invested in the hobby.

A series of Registers will thus furnish a concise record of the career of a fancier as a breeder and an exhibitor from year to year, or over any number of years.

Many useful Emergency and other Hints will also be found in its pages.

Price 6d. from any newsagent,

or 7d. (postal order) post free from this office.

THE GREATEST VALUE FOR MONEY EVER OFFERED. GET YOUR COPY AT ONCE.

CANARY BREEDING COMPETITION.

We have to thank a number of readers for sending us addresses in accordance with last week's offer, which we accordingly repeat:—

In connection with our Canary Breeding Competition, a good house to house canvass ought to be carried on by all lovers of the Canary. A copy of "C.B.," marked in blue pencil drawing attention to the scheme, ought to be dropped in the letter-box of every house where Canaries are hung up in the window, or send us the addresses of six such houses (never mind the names of the residents), and we will post you, as a token of our thanks, a packet of picture postcards.

Will you send me some forms for your competition? I have got two new fanciers since you first started it. I think it a splendid idea for helping the Fancy.—W. JACKSON, Hon. Sec. Pendleton and Salford O.S.

One member of the S.W. London C.B.S., who only made a start this year, has, I understand, about 26 young ones doing, so far, well. Personally, I have had a good number, but, owing to the dark, cold days, have not reared many. I usually get my luck in June.—W. LILLEY.

I have been a Canary fancier since January of this year, and I have much pleasure in joining your Novice competition if you will kindly send me a form. I have taken in CAGE BIRDS ever since I started, and shall have great pleasure in continuing to do so, as I find it very helpful to me. I am not a member of any club, but I soon intend to join one with a friend, who is an old fancier.—JOSEPH PROCTOR, 20, Devonshire Street West, Keighley, Yorks.

Being a reader of your valuable paper, I should like to enter into the Novice Breeding Competition, not having bred before. I should like to ask one question. Take a man with 12 birds—six cocks and six hens—and another man with 12 birds—four cocks and eight hens—intending to run two hens to one cock. How would you reckon them? Should you reckon the number of hens or the number of birds altogether?—E. PLANT (Leek).

[This is answered by our Declaration Form, which see.—ED. "C.B."]

The following highly-gratifying letter has been received in connection with our Canary-breeding Competition. It will be remembered that we offer to supply secretaries with cards advertising the competition and their society jointly. Nearly a hundred societies have availed themselves of the offer, with, we are pleased to say, good results in many cases:—

Eight New Members.

"Just a line to let you know that I am pushing your cards sent. I am getting one put up in the bottom of all the pits in the district, one or two in each of the barbers' shops, one to three in each of the beer houses and hotels and ice-cream shops. In fact, nothing will be missed by me if there is a chance to get one up at all. Our society will feel the benefit so soon as Saturday next, when eight new members will be proposed.—RICHARD GADSDEN, Sec. Hamilton Cadzow Oaks O.S."

Starlings as Friend to the Farmer.

I have seen, early in the morning, after a wet night, the Starlings clearing the fields and commons from worms. I have also seen them searching the sheeps' backs for maggots.—F. HILLS (Woolwich).

NOW OUT! NOW READY!

The finest value in a Canary Book ever offered to the public.

CLAUDE St. JOHN'S

CANARY BREEDING FOR BEGINNERS.

PRICE - SIXPENCE.

Originally published in 'Cage Birds' under the title of

"First Steps in Canary Breeding."

"CAGE BIRDS,"
154, FLEET STREET, LONDON.

A Crowing Blackbird.

Just a line, writes Master J. O. Park (Millom), to tell the numerous readers of CAGE BIRDS that there is a crowing Blackbird at 33, Main Street, Holborn Hill, Millom, the property of Mr. Joseph Coward. He crows just like a Bantam when he starts to sing, also during his song, and many times during the day. It was hand-reared by its owner.

Use our Picture Postcards.

Some Foreign Cage Birds at Home.

An extract from Mr. Frank Finn's charming work, "Ornithological and Other Oddities," just published by John Lane (Bodley Head, London), price 10s. 6d. nett.

Many keepers of the beautiful foreign cage birds now so freely imported have doubtless wished to learn something of their life and habits in a wild state—a wish not so very easy to gratify, since writers of books on birds intended for the general public have a marvellous knack of avoiding such species in making their selection of those to be written about. It may therefore not be deemed out of place if I give a few notes on some birds, more or less familiar in our cages and aviaries, which I have had the pleasure of meeting personally in their natural surroundings.

The opportunity of doing this first occurred to me fourteen years ago, when I was in East Africa for a few weeks, part of the time being spent in Zanzibar, and part in Mombasa—then a very much less important place than it has since become.

What at once struck me at Zanzibar was the abundance of our good friend, the Java Sparrow, which was to be seen commonly all about the town. Here, as in several other Eastern countries, he was only a colonist, having been turned loose about thirty years before my time. The locality evidently suited the birds, though what they fed upon I never found out, as they did not come down into the streets as our Sparrow does; possibly they went out into the country for their meals, for the Java Sparrow has a strong, swift flight, and travels much faster on the wing in the open than one would be apt to suppose from observing his somewhat heavy make and movements in a cage.

As an ornament to the buildings, about which he breeds in cracks and crevices, the Java Sparrow is a great success, and his sweet liquid chirp is much more pleasant to the ear than the harsh notes of the real "spadger." So pleased was I at the sight of him in the capacity of citizen, that when years after I went to live in Calcutta, I tried to introduce him there.

But nearly all the birds I turned out always went off at once, and though an odd one, probably not so strong on the wing, or a casual "escape," might be seen about the place for long periods at times, the birds persistently refused to colonise. As all the building sites are well taken up by the House Sparrow, it is very possible that their attempts to do so would have ended in failures. Once, however, I saw four birds together, in lovely condition, on a bamboo bush, so some may have stayed about away from the houses; and as I have heard of them in the Calcutta suburbs, it is possible they may be becoming established, as they have been for many years in the Madras district. Speaking of the Java Sparrow, I may mention that a gentleman I once met, who knew the bird well and had been in Java, told me that he had only seen three there, so that it would seem not to be much in evidence in its native country. . . . There was another cage bird much in evidence at the more outlying bungalows at Mombasa which it gave me much pleasure to see at large. This was the Cordon-Bleu (*Estrelda phœnicotis*), that dainty little fawn and sky-blue Waxbill so much admired by all fanciers of tiny Finches. These little things were not so very abundant, but caught the eye at once as they hopped about in pairs on the ground, much after the fashion of our Hedge Sparrow; no doubt, like that bird, they were feeding on small insects and seeds.

A beautiful Weaver, of which the male was yellow with an orange head (*Hyphantornis bojeri*), was the commonest bird in Mombasa, though the dull greenish females and young were naturally more numerous than the full-plumaged cocks. This, however, was not then in the trade, and I do not know that it has been imported since, so I merely introduce it here to show how one may miss a good thing. Seeing these beautiful and showy seed-eating birds all about the place, I naturally thought they would be in the possession of many dealers at home, so I did not trouble to keep any, although a fledgling once actually flew into the bungalow where I was staying. But when I got home I found, to my great surprise, that not only was the bird, as I implied above, not to be had of the dealers, but was so little known even to professional scientists, that they had not got the female in the British Museum collection. Moral—don't despise the common birds of a country unless you know all about them. I did not see these Weavers feeding on the ground, but often observed them on low vegetation; their nests were to be seen hung on the fronds of palm trees even among the native huts, several together, as is the general custom of the Weaver group. These nests were rounded in shape, with an entrance hole, but no tubular passage thereto as in some of the nests built by birds of this family. . . .

To return to the foreign cage birds in their own haunts. I did not see much more in this way in Africa, so that it was not until I took up a post in the Indian Museum, Calcutta, in 1894, that I gained much more experience. In the first place I was rather surprised not to see the familiar cage birds in India about the gardens. I did not land in Bombay, or I should have found the Ring Parrakeet a very common bird even in the city trees, as I did later on. In Calcutta this Parrakeet is, indeed, no rarity, but it is not very noticeable except in the winter months, and then is not abundant. It is, however, one of the commonest birds in India generally, and in journeys by rail I often saw it perched on the telegraph wires. In the beautiful district of Dehra Dun, I used also to see the lovely little plum-headed Parrakeet, with its swift flight and musical call, while I now and then viewed the large "Rock Parrot," which bears much the same relationship to the ring-neck as the Missel-Thrush does to the Song-Thrush. The flight of Parrots is very surprising to anyone viewing it for the first time. It is very swift, and the wings are pointed downwards and moved quickly, the bird also rolling from side to side frequently—it is, in fact, the flight of a shore-haunting wader rather than that of a land bird. Few creatures are so active and joyous as wild Parrots, and I always feel quite as much sympathy for a caged Parrot as I do for the much-pitied Skylark, which, after all, is a thorough groundling when he is not singing.

Although the Bulbuls are not very common as cage birds, they are yet well known to aviculturists; and I found two of them among the most widely-spread and characteristic birds in India. They especially frequent gardens, and their graceful movements and sweet liquid notes make them most pleasant neighbours. In Calcutta the two common species were the Bengal Bulbul, with its rich dark plumage and scarlet under-tail coverts—replaced in some places by allied species of rather lighter colour; and the jaunty peak-crested, red-whiskered Bulbul, whose pure white breast makes him quite as noticeable as the other species, although this is larger. The big dark bird was much the commoner in Calcutta, but during the last year I was there (1902), I certainly saw many more of the red-whiskered species. The Bulbuls keep chiefly to trees and bushes, seldom visiting the ground; they feed mainly on berries, eating them even when green, but the young are fed on insects.

The Dhyal, with its Magpie suit of black and white, I had seen at a show at home, and soon found that in India he took the place of our Robin at home, being like that bird, widely spread, but not numerous, and much attached to the neighbourhood of man. These pretty birds were particularly common on Ross Island, in the Andamans, where, in the morning, the air was full of their songs. I did not notice their music much in Calcutta, where, if the birds had been far commoner, the cawing Crows and squealing Kites would have silenced them; but, of course, they sang at times. The Shama, though a common captive in India, is, when wild, a shy woodland bird, like our Nightingale, and I never met with it in that state.

The Rearing and Management of Insectivorous British Birds.

A Paper by Mr. S. W. Birchley, Gloucester, read before the Sheffield C.B.S. on April 4th, 1907.

(Continued from p. 420.)

Speaking of hand-reared specimens, I will just give you a few lines on this matter as it may be helpful should any of you be fortunate to get a nest of young this season. The task is not one that can be carried out without a deal of time and patience. Take the birds at nine or ten days old, nest and all, place them in a basket, a covered one preferred, and get them home as quickly as possible. Place them in a warm corner in the kitchen, and at night I advise you to cover them up as snugly as possible, or they will perish through the cold. As to the matter of feeding, soak your ants' eggs and dry them in a towel, and mix the same with some very finely chopped (or, better still, grated) hard-boiled egg, and attend to them about every two hours; and also give a cut-up mealworm occasionally, not, of course, forgetting the matter of water. You will find them thrive on this treatment well. On the first occasion you will have to open the beak of the bird, as I before described to you, but you will find they will soon look for your coming and take the food readily.

When once got on to their food, place them for a time where they will receive every attention, as they are not really safe till after the moult is over. The whole of the species I have mentioned in this section will thrive on the food just recommended, if given in the quantities named, together with all the insect life you can possibly obtain. The Blackcap, Redstart, and Whitethroats you will find very fond of fruits, such as currants, raspberries, bananas, apples, pears, etc., when ripe.

Taking the Tree-creeper, of which bird I am very fond, although he is considered by many a hard bird to rear, I have not found him so, but just the reverse, and, further, he is exceedingly easy to steady, and has a most engaging little song of his own. Speaking of the Wren family, I really cannot recommend them to the novice, as they are very delicate mites, and exceedingly hard to keep in health for long together. All the rest of the birds I have mentioned, with the exception of one or two species of the Warbler tribe, you will find fairly easy to keep in captivity.

THE PIPITS AND WAGTAILS.

Coming to the various Pipits and Wagtails, I am particularly fond of them, and have been most successful with them on the show bench. Taking the Pipits first, although they are of sombre plumage, they have a sweet little song, and are most docile in captivity. The Meadow Pipit is, I believe, partly migratory, but to be seen here in the winter months in small flocks. The Tree Pipit only visits us in the breeding season, and may be distinguished from his relative by being a smaller bird, with chest of a richer ground colour, and also by having a curved instead of straight hind claw. I cannot recommend you to hand-rear the birds as it will be time wasted. Get the adult specimens, and you will find them, as before stated, very easily steadied if treated kindly.

As to the various Wagtails, I have kept and have now one of each of the five species, and can recommend them to anyone who can supply plenty of live food all the year round; but without this you will find they will gradually decline and die. They are all particularly fond of gentles and various flies. It is really wonderful how quick they are when a fly settles on their cage front; they are invariably quicker than their quarry. These birds again I do not recommend you to hand-rear, as they are so easily tamed; but you will invariably find that an autumn-caught bird will take to confinement far better than a spring-caught specimen. A good time, to my mind, is just after the breeding season is over. You will find these birds very fond of a few soaked ants' eggs occasionally, and in the winter a little cream cheese.

THE LARKS.

The next section of importance is the Lark section, which consists of these varieties, the Shore, Sky, and Wood Larks. You will find them thrive on the food I have before described, together with a little mixed seed now and then, or a few ground oats, not forgetting a good supply of greed food. Larks as a whole are exceedingly hard to steady, therefore I adviso you to hand-rear them when obtainable. I find them all very healthy birds in confinement, if they are provided with proper food and exercise. They will always do you credit for the time spent on them. As to song, I think the Wood Lark is the best; but there is no mistake that our friend the Sky Lark, when pouring forth his pure wild notes, hundreds of feet above this earth of ours, makes us feel quite bright and fresh, and it is then, to my mind, that we really think of this wonderful little musician as we should do. I really consider it worse than cruelty the way some people cage these most lovely songsters, having no regard for their natural life and surroundings whatever. The Shore Lark, to my mind, is the most beautiful of the three, but he has no song, and is exceedingly hard to steady down, as he is seemingly possessed with a highly nervous disposition.

SOME LARGE BIRDS.

I will give you next a few hints on the Magpie, Jay, Chough and Great Grey Shrike. It is advisable to always hand-rear the Jay and Magpie, as the matter of steadying is then got over, which I can assure you is a big thing accomplished. The Magpie and Jay are both birds of most beautiful plumage, and can invariably be taught to talk most fluently. The Magpie, Jay, and Great Grey Shrike play havoc with the young of other birds, and even the parent birds themselves when opportunity comes their way. As to hand-rearing, feed every two hours on barley-meal made crumbly moist with new milk, mixing with the same plenty of raw meat and water, and administering it frequeutly. You will find them thrive rapidly on this, and they will soon pick up for themselves. These birds will eat almost anything in the way of table scraps, if meat is served with it.

Speaking of the Chough, this is a most handsome bird, that well repays his keep, as he has it all his own way in the A.O.V. large classes at our shows, but as I have never had one in my possession I really cannot give any information on the same, as to his keep and welfare, but from what I am told he is a hardy bird, if proper food and management be given him. As to appearance, he is truly handsome, his red beak and legs showing up against his magnificent black plumage to perfection. If you exhibit one I can assure you that you will be successful in one thing (as also with Magpies and Jays), and that is helping the railway companies to pay a good dividend.

As to the Great Grey Shrike, although this bird is hard to steady, I find him hardy if proper food is given him; be cautious over the use of raw beef. Fed principally on cockroaches, mice, birds, etc., they will thrive well; but this, again, like the previous three varieties, is a very expensive bird to keep for exhibition. You will have to provide these birds with ample cage room for exercise, and plenty of water to bathe in. I advise you to drive a nail through the perch of the cage of these birds, so that they can place their food on it, and tear it to pieces before eating it. If this is not done they will have great difficulty in getting the pieces of flesh sufficiently small to swallow.

(To be continued.)

ESTABLISHED 102 YEARS.

HINDHAUGH'S

'SPANISH' SEED.

Absolutely the finest the World produces—Boldest and Cleanest.

MONEY CAN NOT BUY FINER.

SPECIAL OFFER:—56lbs. for 12/- Carriage paid in U.K. Cloth bag included gross (excepting Ireland).

This very special offer is made to introduce this "GRANDEST OF ALL SPANISH CANARY SEED" to all bird fanciers and includes delivery to any station in England, Wales and Scotland having through communication with the North Eastern Railway from Newcastle, by goods train.

We quote as follows on rail Newcastle:—

"SAMPLE A"

Finest obtainable Re-cleaned Spanish Canary Seed, 10/- per 56 lbs., 2/9 per 14 lbs. *(Bag free.)*

Carriage if by passenger train (payable by buyer) is only:—(in England, Wales and Scotland)

Above 50 miles and not exceeding 100 miles:—7d. for 14lbs.	11d. for 28lbs.	1/9 for 56lbs.
100 " " " 200 " 10d. "	1/2 "	2/4 "
Over 200 any distance .. .. 11d. "	1/6 "	2/11 "

Proprietors:— MILLERS AND MANUFACTURERS,

Alderman J. Barker Ellis. Sir Joseph B. Ellis, J.P.
William B. Ellis. Joseph Ellis.

Newcastle-on-Tyne.

Angel's Wings as Bird's Nest.

In Keddington Churchyard, near Louth, a Thrush has built its nest between the wings of the statue of an angel. Carved in white marble, the figure is enclosed for protection within a wire cage, and it is difficult to understand how the bird contrived to carry the material for its nest through the closely-woven wire netting. Within this sanctuary, however, secure from interference, the Thrush may now be seen sitting on her eggs.

CLUB REPORTS.

MERTHYR, DOWLAIS & DIS. F.A.

Meeting held May 10th. The retiring officers were all re-elected, and we are pleased to state that J. T. Harrop, Esq., has accepted the office of president. Meetings will now be held every fortnight, and all who wish to become members should apply at once, so that they will have a voice in drawing up the schedule for the next show.

J. THOMAS, Hon. Sec.

SOUTHEND AND DIS. O.S.

Meeting held May 8th. Eight new members were elected, and Mr. J. Quilter was added to the committee to represent Leigh-on-Sea. First Feather Show was fixed for July 10th, and a schedule of 22 classes was accepted. Mr. A. E. Patrick will judge. The annual show was fixed for October 22nd and 23rd. Secretaries, please note date to avoid clashing. The society has a twenty-five mile radius. The annual subscription is 2s. 6d. After June 27th there will be a nomination fee of 1s. Any further information the secretaries will be pleased to furnish.

J. DOBSON, Hon. Sec.

GLASGOW SOUTHERN O.A.

Meeting May 6th, Mr. J. Renwick in the chair. Messrs. J. Hay and G. Muir were admitted members. Mr. A. Marr was proposed. A census of young birds bred by members present was taken. Result showed an average of fully two birds per member. Mr. John Renwick read a paper on "Pairing, Breeding, and Rearing Scotch Fancy Canaries," which was much appreciated. A discussion followed, Messrs. Gilies, McQuillan, Stewart, Orr, Joliffe, and the Secretary taking part in it. Mr. McQuillan proposed a vote of thanks to Mr. Renwick for his paper. Mr. Renwick replied, and thanked the members for their kindly criticism.

J. FLEMING, Sec.

BRISTOL CAGE BIRD SOCIETY.

Meeting May 1st. Unfortunately the lecture promised by Mr. H. Fowler had to be postponed till next meeting, owing to Mr. Fowler being out of town. A good amount of business was got through, the most important being the schedule for annual show. It was decided to give a good classification (62 classes open) so as to give fanciers in all varieties a good opportunity to show. The novice and amateurs being thought of, four classes being added for their benefit, which we hope will be well supported. Mr. Stone, Kingswood, has kindly given two silver cups for competition amongst local exhibitors. Two new members joined the society, Mr. F. Buckland and Mr. F. Horler. Mr. W. Bull (chairman) was elected to represent the society as delegate to the Cage Bird Union. It was decided to hold a judging competition in connection with the First Feather Show in July, three prizes to be given. Mr. J. Munro has kindly given a gold centred medal to the competitor placing the birds nearest to the judge's selection.

J. MUNRO, Hon. Sec.

WEST OF SCOTLAND, Etc., B.C.

Usual monthly meeting held May 4th in Nelson's Hotel, Glasgow, Mr. J. J. Manson, L.D.S., in the chair. The minutes of last meeting were approved. The following new members were accepted:—Messrs. A. G. Stone, W. Jackson, and Jas. McFarlane. A syllabus of lectures, etc., was drawn up, and is as follows:—Thursday, June 6th, "Norwich Plainhead Breeding, Colour Feeding, and Exhibiting," by Mr. C. Campbell; Saturday, July 6th, First Feather Show, all varieties of Canaries; Thursday, August 1st, Exhibition of Cage Making, by Mr. J. Munro; Saturday, August 3rd, First Feather Show, Mules and Hybrids; Saturday, September 7th, "Ailments of Cage Birds," by President J. J. Manson, L.D.S., illustrated by lime-light views; Thursday, October 3rd, "Washing and Staging," by A. Muir; Saturday, November 2nd, "Breeding and Exhibiting the Border Fancy," by Mr. Wm. Mossie (Ayr). Mr. Young then proceeded with his lecture on "Crests and Crestbreds," which was highly appreciated by all present. Fanciers are invited to any of these lectures.

GEO. SMART, Sec.

THE NORWICH PLAINHEAD CLUB.

Meeting of committee held at Manchester, May 11th, Mr. Dent in chair. The chairman regretted that we had an adverse balance on the last year's working, but was pleased to say that the appeal made to its members had been so manfully responded to that the debt was not only wiped out, but a good substantial balance handed over to the society, and he felt sure the committee were deeply indebted to the subscribers, and also to the gentleman who had so successfully carried it out. A vote to that effect was unanimously carried. Letters were read from the Southern and Scottish Plainhead Clubs, referring to the coming contests. The secretary was instructed to write them, with a view of a triangular contest. The club's model was next discussed, and agreed to have it considered, and a scale of points added, which was done, but left for confirmation at the next meeting, when we hope to have an enlarged model or drawings of same. A discussion arose, "Who is the Amateur Champion? The man winning the gold medal for best bird, or the one gaining most points?" The committee decided the latter to have the honour. With a view to increase the membership of the club, the committee will offer a prize of 10s. 6d., or value, to the member obtaining the most new members from May 11th to September 30th. The Club Show will be held at Nottingham, Cup Competitions at Burnley, Newcastle-on-Tyne, Sheffield, and Barrow, subject to our conditions being accepted.

J. RAYNES, Hon. Sec.

COVENTRY F. & F.S.

The annual dinner and concert of the Coventry and District Fur and Feather Society was held at headquarters on May 7th, when a large number of members and friends sat down. Amongst those present were Councillor Batchelor (in the chair), Messrs. Ashley, Blackshaw, Bent, Sheffield, Stringer, Holland, Shakespeare, Harris, Bell, Jones, Webster, Gilbert (A.), Gilbert (W.), Hyde, Simmonds, Bray, Elsey, Wanklin, Lee, jun., etc. Mr. Barnesby opened the musical programme with a pianoforte solo; then followed a song by Mr. Battery, entitled, "I wonder what he is going to do next." Mr. Wanklin sang "Marguerite," for which he was loudly cheered. There was a break now for a presentation of a beautiful barometer, subscribed for by members of the society, to Mr. Frank Elsey, who has joined the noble army of benedicts, Councillor Batchelor, in a neat and well-chosen speech, making the presentation. The chairman then called on the secretary, Mr. Sheffield, to read the balance sheet of the Christmas Open Show, which showed a loss of over £9. This was in a measure due to the inclement weather on the day, which seriously interfered with the gate. Mr. Shaw then gave "Beautiful Leaves." A recitation by Mr. Barnesby, "Lucky Jim," in his well-known inimitable style, was loudly cheered. Councillor Batchelor and Mr. Wanklin gave the duet, "The Larboard Watch," which went splendidly. Mr. Bent sang capitally "The Snow is Falling Lightly." The chairman made a few remarks regarding the society, and also congratulated the members on taking third prize with their decorated car in the Lifeboat procession. The singing of the National Anthem brought to a close a most pleasant evening.

DARLINGTON CANARY & B.B.F.A.

Meeting held May 8th, Mr. W. A. Simpson in the chair. The following classes were arranged for our First Feather Show, to be held on June 29th:—1 Yorkshire clear, ticked, or variegated yellow, 1 ditto buff, 1 Norwich, clear, ticked or variegated yellow, 1 ditto buff, 1 A.O.V. Canary, 1 Linnet class, and 1 A.O.V. British class. Judge, Mr. T. Clemmson, Darlington. Mr. W. Mundell, Bradford, will judge our Open Show on November 2nd.

R. S. BLACK, Hon. Sec.

CLAPHAM AND DIS. OPEN C.B.A.

A meeting was held at the Alexandra Hotel, Clapham Common, S.W., on May 8th, when over thirty fanciers attended. The chair was taken by Mr. W. H. Vale, who opened the meeting by saying that the large area of Clapham, Brixton, Balham, and Tooting was practically without a cage bird club. The only society at present in the Clapham district being the "Eagle" club, which was formed some five years ago for the purpose chiefly of initiating the novice in the ways of bird keeping and exhibiting. That society had served its purpose as a members' club, and had also held many successful shows amongst its members. It was very conservative in its rules, as a fancier had to be a member at least three months before he became eligible to show. It was thought a fitting opportunity to add yet another society to the many that already existed in London, and that meeting had been called to consider whether a society, to embrace all the branches of the cage bird Fancy, and open to all who desired to become members, should be formed. Upon the motion being put to the meeting, it was evident by the unanimous vote that the proposal met with favour. The name of the society brought forth many suggestions, but the proposition made by Mr. Allen Silver, and seconded by Mr. Frostick, that the name of the society should be the "Clapham and District Open Cage Bird Association" was the one that received the unanimous support of the meeting. The society will comprise British and Foreign birds, Canaries, and Hybrids, and it was decided that as far as possible the committee, when formed, should be representative of the four sections. Mr. Vale was voted chairman, and Mr. Hathaway vice-chairman, while Mr. C. T. Maxwell was, in spite of his protest, elected treasurer, an office he filled so well a few years ago in another society. Mr. Stephen H. W. Baker, of 11, Foulser-road, Upper Tooting, S.W., undertook the duties of Hon. Sec., and will be pleased to hear from any fanciers desirous of joining the club. One of the first duties the hon. sec. was asked to undertake was to ask the president of the late "Eagle" C.B.C., P. M. Thornton, Esq., M.P., to become president of the new society, and Sir Henry Kimber, Bart., M.P., Sir E. Pink, the Mayor of Wandsworth and numerous other local gentlemen to become patrons of the society. The subscription after careful consideration was decided by the vote to be fixed at 4/- per annum, with an entrance fee of 1/-, and some thirty new fanciers handed in their names and paid their entrance fees. The next meeting will be held at the Alexandra Hotel (the headquarters) on Monday, June 3rd, at 8 p.m., for the purpose of settling the rules and other important business, including election of members. Any fanciers who desire to join should send in their names, with the 1/- entrance fee, to Mr. Baker before the meeting, if they cannot attend personally.

COLOUR FEEDING.

Give Young Canaries,

WHEN 8 WEEKS OLD,

SPRATT'S ORANGE PLUMAGE

(In 6d., 1/- and 2/- Tins),

OR

RED COLOUR FOOD

(In 6d., 1/- and 2/6 Tins).

Pamphlet on Canary Rearing and —— Samples of Foods Post Free. ——

SPRATT'S PATENT, LTD.,

24 & 25, FENCHURCH ST., LONDON, E.C.

FALKIRK AND DIS. C.B.S.

Meeting held May 2nd. There was a large turnout of members, some new members enrolled. Membership up to date is 47. The First Feather Show is fixed for July 20th.

WILLIAM CLUBB, Sec.

LEYTON & DIS. C.B.A.

Meeting held May 6th. Mr. G. Gardner delivered his lecture, "The Norwich Canary and the Green Blood," to a well attended meeting of nearly 50 members and friends. Several questions were asked and suitably answered, and a hearty vote of thanks to Mr. G. Gardner brought a pleasant evening to a close. Members, please do not forget the country ramble on May 25th.

B. F. FORSE, Hon. Sec.

PENDLETON & SALFORD O.S.

Meeting held May 9th. Chairman, Mr. Stringer. There was a good muster of members. Mr. S. Skelton resigned the post of secretary. Mr. W. Jackson was appointed secretary. Proposed by Mr. McCann, seconded by Mr. James, that the society's best thanks be given to Mr. Skelton for service rendered to the society; Mr. Skelton replying to same. Three new members were enrolled.

W. JACKSON, Hon. Sec.
17, Caton Street, Tamworth Street, Old Trafford.

METROPOLITAN ASSOC. C.M.&H.B.

Meeting on Thursday last at the Crown Hotel, Lavender Hill, S.W. Mr. E. R. Portell was elected a member, and Messrs. W. J. Marsh and C. Sawyer were nominated. Mr. C. A. House was elected a vice-president. It was announced that Mr. T. R. Trower would give a lecture on "Seeds and their use" at next meeting. The Chairman, with a brief introduction, called upon Mr. G. Gardner for his lecture on "The Yorkshire," and who, in opening, referred with deep regret to the death of Mr. W. Orme. Proceeding with his lecture, he said that in the Yorkshire you want a bird with plenty of life and style, not like the wooden bird so often seen at shows. He next dealt with colour, and in the course of his remarks said he had known of a clear yellow being bred from two marked birds. In pairing up birds he gave preference to buff cocks and yellow hens, because he was of the opinion that you get quality from the hen and not from the cock. He was of opinion that colour follows quality, and that like did not always produce like. He advised anyone having short flighted birds to clear them out. Questions were then put by Messrs. Martin, Wythe, Peck, Humphrey, etc. A hearty vote of thanks was accorded Mr. Gardner for his instructive lecture.

A. J. HEAD, Hon. Sec.

SINGING CONTESTS.

SHEFFIELD.

Linnet contest held May 12th, at the Shrewsbury Hotel, for three prizes, promoted by Mr. P. Chrowshaw. Thirty-two birds competed, and some very good singing was heard. 1, Salter; 2, Dickinson; 3, Robinson.

LONDON.

At the Bee Hive, Cynthia-street, Pentonville, there was a large gathering on May 12th, both afternoon and evening. There were Linnet and Chaffinch handicaps, which provided some capital singing. Pony Moor, Doctor, and Charley Macock proving successful.—T. MORRISON, Timekeeper.

PRESTON.

This was organised by the Preston O.S. to revive the interest in a hobby which had been dormant in this district for some considerable time. The result was splendid, and exceeded all expectations. A splendid cup, presented by Mr. J. Sandiford, and other valuable prizes to the value of £3, proving a great attraction, drawing together a grand total of 59 entries, which comprised some of the best birds in Lancashire. The contest was held at the Cherry Tree Inn, Preston, on May 11th, when some really good quality singing was heard. A grand muster of fanciers were present from Leeds, Wigan, Blackburn, Great Harwood, and a host of local lovers of the Lintie. The judges were Messrs. W. Eastham (Preston), G. Rostron (Blackburn), and W. Clark (Leeds). The cup winner turned up in the bird hung by that lover of a good Linnet, Mr. D. Bentley, Great Harwood. 1st and cup, Bentley; 2nd, Leeming; 3rd, Pickring; 4th, Dobson; 5th and 6th, Topping.—J. W. CLEMINSON.

LEEDS.

The quality Linnet singing brigade mustered in large numbers at the King's Head, to witness the usual week-end contests promoted by Mr. J. Booth on May 11th. Nineteen picked birds competed for three prizes. The birds were in splendid condition, and gave a good account of themselves. 1st, Galley; 2nd, Harrold; 3rd, Baines. Judges, J. Melia, G. Tours, and W. Naylor. On May 12th 22 birds competed for four prizes. Judges, J. Melia, W. Naylor, and C. Cooper. 1st, Hardcastle; 2nd, Stead; 3rd, Hodgson; 4th, shared by Stead and Harrold. Look out for our great Whitsuntide contest, which takes place on Whit Monday, when 28 champions sing for upwards of £20, for members only.

J. MELIA, Hon. Sec.

The Prince Albert Linnet Association met on May 12th to compete for three prizes, given by Mr. J. R. Saynor. There were a large number of fanciers present. Seventeen picked birds sang for quality singing only. Judges, S. Green and B. Jackson; timekeeper, G. Towers. The birds were in the pink of condition, and gave a good account of themselves, to the satisfaction of all present. 1st, Allen; 2nd, Wood; 3rd, Dean. Mr. Allen is offering a gold medal to the first Linnet fancier who brings a Linnet to beat his champion.—E. WOOD, Hon. Sec.

The usual contest took place at the Skinners' Arms, Buslingthorpe, and there was some fine singing. The first prize was awarded to a splendid bird. 1, 2, Galley; 3, Neat; judge, F. Raper; timekeeper, — Lorriman.

F. RAPER, Sec.

A Curious Capture.

A certain South of England railway has long been noted for slowness and unpunctuality, a standing joke being that passengers could alight and gather wild flowers or blackberries and afterwards catch up their train by running after it! Here is a tale of something "gathered" when going at a high rate of speed. A correspondent of a contemporary says:—As the 10.20 p.m. train from Ongar on February 7th was running between North Weald and Epping at the rate of from 40 to 45 miles an hour, a Thrush suddenly flew out of a wood and alighted on the jacket of the fireman (Saltmarsh), who was standing on the footplate of the engine. The bird clung there till it was captured by the fireman, who now has it in a cage, seemingly none the worse for its experience.

FIRST FEATHER SHOWS.

Dates inserted free of charge.

May 18.—Hucknall Torkard C.B.S.
June 1 and July 27.—Bradford East O.S.
June 3.—Hull C.B.S.
June 6.—Gloucester and Dis. C.B.S.

(Secretaries desiring the initials of their Judges inserted, should forward same on at once.)

At Newport, Isle of Wight, on December 4th, Mr. W. R. Miles will act as judge.

Mr. Scarfe having resigned his position as Secretary of the Diss C.B.S., all communications for the society should be sent to Mr. Gooderham, Sunnyside, Diss.

T. B. Cutts (Nottingham) writes:—I am only a novice, but I have taken your valuable paper (CAGE BIRDS) in for some time, and I have gathered a good deal of information from it.

Mr. H. W. Battye will judge Bradford West First Feather Show on June 22nd.

Mr. Fred Hills has been appointed to judge British birds at Cambridge on November 12th.

Breeding results for this district are fairly satisfactory. We only number about five breeders, who all take CAGE BIRDS.—H. JAMES, Kirton Lindsey.

Mr. A. Mather, of Widnes, writes:—I am having a splendid sale for my inflammation cure. I am sending it to Ireland, Scotland, and Wales. I have had good results, thanks to CAGE BIRDS.

Messrs. Payne and Wallace, of "The Little Zoo," Bath, have reproduced in handy pamphlet form the article which appears in the current issue of the "Avicultural Magazine," from the pen of Rev. H. D. Astley, and which describes a visit to Messrs. Payne and Wallace, at Bath.

The members of the L. and L.F.A. are earnestly requested to keep June 2nd open, as the next meeting will be on that date, and will be held at Glossop. This meeting will be of great interest, and should attract a large gathering. Particulars will appear in CAGE BIRDS at a later issue.—H. OLIVER, Hon. Sec.

The many friends of Mr. A. C. Allaway will regret to hear that he has been passing through a time of stress and trouble, ill-healtb, and death having made their presence felt in his domestic circle, whilst he himself bas been stricken with influenza. We trust things may soon improve, and that the outlook for our friend be much brighter.

At our First Feather Show, on July 18th, the judges will be:—Canaries, Mr. D. Jenkins; British and Hybrids, Mr. T. Gamage. Our committee has decided to give a few classes for Crest and Crestbred at our Open Show, to be held in November, so we bave engaged Mr. Richard Waters, of Cardiff, to judge them.—ALF. HITCHINGS, Hon. Sec. Swansea C.B.S.

Oldham Cage Bird Society have fixed the tbird Saturday in June—the 5th—for their First Feather Show, and have chosen Mr. Wm. Hardy, one of their members, as judge. For the back-end sbow, which takes place on Saturday, November 23rd, arrangements have been made for a more central show room, and the George-street School has been booked.

Breeding results amongst our members are not what one might wish. Some have done fairly well the first round, others just the opposite. The chief cry seems to be "dead in shell," or "young dying a few days old," owing to the cold changeable weather. We hope for better results second round. Our society is now going strong, having close on fifty members. We have bad some pleasant meetings lately, having been favoured with exceedingly interesting lectures on "Breeding and Rearing" hy Mr. McCarter and Mr. G. Lander, of Leicester. Our First Feather Show has been fixed for July 10th.—E. THORP, Hon. Sce., Loughboro' C.B.A.

From Mr. Charles Toope, F.R.H.S., "the inventor and pioneer of oil and gas heating apparatus for amateurs' greenhouses," comes a couple of illustrated catalogues. Heaters and boilers of every description and price are figured and described in the one, whilst incubators, brooders, and their component parts are illustrated and priced in the other. All goods are of the best workmanship and finish, and satisfaction is guaranteed. For such as may be desirous of improving and regulating the temperature of birdroom or aviary, we strongly recommend the inspection of Messrs. Toope's price list, which will be sent gratis and post free upon a mention of CAGE BIRDS to Chas. Toope and Son, Stepney Square, Stepney, London.

The many friends of Mr. Alex. Donnelly, of Shaw (Lancashire) will be pleased to hear tbat the accident he met with on the 4th inst., through being jerked off a tramcar at the Junction, Shaw-road, Oldham, has not proved as serious as was expected. Mr. Donnelly had seen his wife and friends safely inside the car, and was proceeding to mount the steps when the journey was commenced. The car was on the loop line, and taking the straight course, caused a sudden movement, and "Alex." was pitched off the steps on the pavement, receiving a nasty scalp wound, which rendered him unconscious for some time. After careful attention, he was able to make the journey home a little later on in the evening. He has, we are pleased to state, been able to follow his employment, and does not appear to be much worse after his severe shaking.

A Fatherly Novice.

"Thirty-three years have I been a novice, and I don't like leaving the novices, as I am afraid they will miss my fatherly advice." Thus spoke Mr. Denton at the Yorkshire Canary Club meeting the other day. For half a lifetime struggling to win a first prize in open competition! Who says the true fanciers' spirit is dead? We often hear Yorkshire grit spoken of. Mr. Denton is a living example of that valuable property. Now that he has gone up to the higher class, we wish him still further success.

Mr. J. R. Thompson is removing to Wolseley Place, Cragie, Perth.

Hazel Grove and District C.B.S. first Feather Show, writes Mr. T. Walters, is fixed for June 21st and 22nd next.

At our last meeting much good business was done, new members enrolled, and we are making good headway, writes Mr. J. T. Carrick, the Hon. Sec. of the Jarrow C.B.F.S.

Mr. J. Hayward having resigned his position, I am now the Secretary to the Hyson Green C.B.S. All communications should be sent to me, A. E. Garton, 17, Arno Avenue, Sherwood Rise, Nottingham.

Mr. J. Hopkins will judge our First Feather Show on July 20th. Mr. Osbaldeston having resigned the secretaryship, all communications should be sent to Mr. J. Cleminson, Hon. Sec. Preston O.S., 38, Elmsley Street, Preston.

At the Guisborough F.S. monthly meeting, held May 4th, it was decided to elect Mr. Cowgill, of Bradford, to judge cage birds at our forthcoming annual show, to be held on January 1st next, writes Mr. W. T. Simpson, tbe Hon. Sec.

Mr. J. Pitchford, of Stoke-on-Trent, writes:—The Cuckoo has been heard in various parts of the district adjoining the Potteries during the last few days. On Sunday Seagulls were noticed flying between Stone and Longton, in the wake of Wild Duck.

The judges at Perth Show, on Nov. 23rd will be Messrs. J. Strachan, M. McLauchlan (Scotch), G. F. Adamson (Crests), D. Craig (Plainheads), J. Patterson (Borders), J. Stark (Wild Birds), so writes Mr. J. R. Thompson, of the City and County of Perth O.S.

Garston B.B.A. have decided to hold tbeir annual Nest Feather Sbow on July 6th, and the Old Show on December 7tb, the judges being Mr. H. Abbott, of Farnworth, and Mr. J. Wilcock, of Bradford, respectively, writes Mr. A. Wilkinson, the Hon. Sec.

In sending birds by rail it is needful for them to be well labelled. Messrs. Payne and Wallace, of "The Little Zoo," Bath, realise this, and most striking are tbe labels which tbey use. Railway porters and others have no excuse for roughly using birds so labelled.

It is with extreme regret, writes Mr. Thomas Smitb (Glasgow), that I bave to announce the severe loss whicb the well-known Scotch Fancy judge, Mr. Alexander Hamilton, of Caldeocruise, has sustained by the passing away of bis belpmate and dearly beloved wife. She took an active interest in her husband's hobby, and she will be much missed by Mr. Hamilton and family. I am sure readers will join in expressing sympathy with them in their sad bereavement.

Ramsden's Pure Peppers.—Second and last consignment for this season just arrived. My entire stock exceeds last year's sales by 36 x 22 pound tins only. My regular traders and large consumers should place their orders without delay. Owing to the shortage of first-quality peppers, I have many applications for large deliveries, but wish to give my regular customers the preference. They must, bowever, give me their orders as early as possible.—J. W. RAMSDEN, 10, Heron Road, Herne Hill, London, —ADVT.

The Kirkcaldy Poultry, etc., Show having fallen through, tbe cage bird section have decided to bave a show on their own. We have enrolled 30 members, and at our first meeting fixed our show for November 9tb, in the new Temperance Hall, a model of a hall for a cage bird show. We hope fanciers will continue to give us their support, as they did in former years, when the sbow was combined. I may say the old show was the biggest one-day sbow in Scotland, and we hope fanciers will rally round and make our cage bird show the biggest one-day sbow in Scotland.—J. WILSON, Sec.

British Bird and Mule Club for Bradford (Yorks).

Through the increased interest taken in British Bird and Mule breeding and keeping in this district, I have been asked by several fanciers, writes Mr. H. J. Chittenden, to call a meeting to discuss the desirability of forming a club with the object of giving better classification at our shows. All fanciers in sympathy are asked to please attend a meeting to be held at the Market Tavern, Godwin Street, Bradford, at seven o'clock prompt, on May 25th.

Cage Bird Society for Neath.

A representative meeting was held at the Town Hall, Neath, with the object of forming a poultry, cage bird, etc., society for Neath. Mr. Robert B. Richardson announced that already fifty gentlemen had promised to become members. It was decided to form a society. Mr. W. H. David was then voted to the chair and unanimously appointed chairman of committee, and Mr. Richard Llewelyn vice-chairman. It was agreed to call the society "The Neath and District Fanciers' Association." Mr. Sair was appointed hon. treasurer, and Mr. Richardson hon. secretary. The annual subscription was fixed at 2s. 6d.

THE CAGE BIRD UNION.

Copy of the Voting Paper just sent out to Societies.

Is your Society in favour of the whole of Rule 17 of the C.B.U. Rules being retained?

The words proposed to be deleted are:—"And registered members of the Union shall be liable to suspension if found exhibiting at a suspended or non-affiliated or non-licensed club's show, otber than First Feather Shows and Shows confined to members."

Please write Yes or No .....

DEFINITION OF A NOVICE OR AMATEUR.

1. A Novice is one who has never won a 1st, 2nd, or 3rd prize in Open or Amateur Classes, or three first prizes in Novice Classes for Canaries or Hybrids.

2. A Novice is one who has not won a prize at any Open Show. All birds shown in Novice Classes shall be their own breeding and breeding stock.

3. A Novice is one who has never won a 1st prize in Open Competition, or three 1st prizes in Open Novice Classes.

4. A Novice is one who has never won a 1st prize in Open Competition, or three 1st prizes in Novice Classes at three separate Shows.

5. A Novice is one who has never won three 1st prizes in Open Novice, Open Amateur, or Champion Classes.

All these definitions are presumed to apply to Canary and Hybrid Classes only.

Put a cross against definition favoured.

EXTRACT FROM LETTER ACCOMPANYING VOTING PAPER.

The Case for Rule 17.

"Every member of the Council, with one exception, is of a decided opinion tbat tbe proposed deletion of this Rule will seriously cripple the work of the Union; they believe it to be the backbone of the Union, and without it, it will be difficult to carry out the objects of the Union. Tbey would point out that witbout this Rule many Societies will drop out of the Union, and it is certain few, if any, Sbows will apply for licenses to hold their Shows under the Union's Rules. No mixed Show would trouble to take out a license, the Cage Bird Section generally being considered a very secondary branch of the Show.

Mixed Sbows (i.e., those catering for Poultry, Rabbits, Pigeons, etc.) are notoriously lax in the way they cater for cage birds, in the way of classification, etc., as well as accommodation, and one object of the Union is to improve the conditions of Shows generally.

Most of the complaints that have been brought to the Union's notice are cases of default on the part of mixed Shows, either by non-payment of special prize money, amalgamating classes without notice, or paying half prize money without any notice to this effect being given in the schedules, and also almost wilful neglect of the birds themselves.

Further, exhibitors suspended by the Union would have the run of all Sbows not applying for license, as well as the Sbows of such societies as refrain from re-affiliating to the Union.

To bear out this, I give an extract from the report of the Dutcb (Rabbit) Clubs whicb, be it noted, has no prohibition Rule:—

It is to be regretted tbat some Shows still decline to accept the Club's reasonable conditions, the difficulty with some being tbe refusal of entries from those persons who are under suspension. Very little can be said for tbe management of an exhibition where the officers, rather than support the Club, prefer to accept entries from persons whom they know to have been convicted after the fullest enquiries.

This is what will happen at our mixed Shows and others not affiliated. We have had instances of this in the cases of suspensions made by tbe L.P.O.S. and the Norwicb Plainhead Club, their suspensions not being backed up by many Show authorities.

The Council further point out that this Rule, to which exception has been taken, is no new feature; it is adopted by many kindred Unions, and in a more stringent form by tbe Kennel Club, tbe Homing Union, the Jockey Club, the National Hunt Club, and tbe Amateur Athletic Association.

The Secretary of the Pigeon Club writes, when reviewing the C.B.U. Rules:—"You have some splendid Rules, especially 14, 15, and 17. To be able to exercise real power in this fashion is a step in the right direction for the Fancy. I wish our Rules were more to the effect of these three."

The voting papers should be returned to me on or before the 1st June.

GEO. W. F. LYTHGOE, Sec.

THE SEASON'S COLOUR FOODS.

Reports on Samples.

The colour feeding of cage birds has now grown to such proportions that a vast quantity of pepper, both hot and cold, is annually consumed, and a large number of dealers are regularly engaged in ransacking the markets of Spain and elsewhere for the pods from which it is manufactured. One of the foremost merchants in the trade is Mr. J. W. Ramsden, 10, Heron Road, Herne Hill, and the samples just received from him for this year's supply seem to indicate that be has again been particularly fortunate in securing exceptional quality feeds. We have carefully examined the feeds submitted, and find them to be a brilliantly rich and deep colour, commendably free from waste and foreign substances, ground to a nicety, and containing the proper proportion of natural oil. Mr. Ramsden's many years' experience of the trade stands him in good stead in the preparation of these feeds, and his high reputation for first-class quality peppers should be enhanced by the supply he offers the public this year. The smell and appearance of both samples leave nothing to be desired, and the Pure Cayenne (prepared for the benefit of those who desire to mix a little hot pepper with the tasteless) is a particularly attractive, clean and bright article. Ramsden's peppers make their most cogent appeal to the birdkeeper, however, in the fact that they are guaranteed to be "absolutely pure and unadulterated."

Other traders' samples will be reported on as received.

Owing to the Hall being engaged, Leamington Show will not be held on the dates originally fixed, but upon November 7th and 8th.

SHOW ADVERTISEMENTS
(TARIFF ON APPLICATION).

HARPENDEN, WHIT-MONDAY,
Horse Jumping and Driving Competitions, Dogs.
POULTRY, PIGEONS, RABBITS and CAGE BIRDS. Entries finally close in all Sections **Monday, May 13th,** to the Secretary.

"CAGE BIRDS" BY POST.
The Subscription Rates for this Journal are as follows
13 Weeks ... ... 1s. 9d.
26 Weeks ... . 3s. 3d.
52 Weeks ... ... 6s. 6d.
The Annual Subscription will, in future, include
A Free Copy of "Cage Birds Annual."
Copies are posted to Subscribers every Thursday evening promptly and regularly.
THE MANAGER, "Cage Birds.

A curious friendship between birds has been recently observed at Ballantrae. A Blackbird built her nest in a quiet covert in the neighbourhood, and after laying four eggs she was joined by a Thrush, who also laid four eggs in the same nest. Owing to the sheltered nature of their retreat, the hospitable Blackbird and her friend hatched the double brood in peace.

Although it is more than a fortnight since my last advertisement appeared, I am still receiving orders for birds and pamphlets. The pamphlet will be sent as soon as received from printers, and postal orders will be returned as soon as possible. I really cannot return them as quickly as received, and have about £7 in hand at the present moment. Quite seven out of every ten mention CAGE BIRDS, which speaks well for your paper as an advertising medium. —ERNEST G. BROWNING, Ealing, W.

SEND FOR
Cage Birds = Annual =
And you will be delighted beyond expression at the value received.

Never was the bird keeper better catered for in respect of birdy literature than he is to-day, and nowhere can you find a handier, more practical, or complete guide to the hobby of cage bird keeping than I offer in CAGE BIRDS ANNUAL.

Listen to this conversation between a beginner and our publisher:—

Publisher.—Take one of our ANNUALS, Sir?

Beginner.—Not I. What do I want with an annual? I've got the weekly.

Publisher.—Without disparaging the weekly, Sir, the ANNUAL is a totally different publication. The ANNUAL is a handy work of reference. You find its value right throughout the year. You never know when it may come in handy—save a bird's life or give you exactly the item you want to know.

Beginner.—Will it tell me if there's a club in my district?

Publisher.—Yes. Here is a complete list of clubs, the names and addresses of the secretaries, fees, etc.

Beginner.—Yes; that's all right, but if there's something I can't understand—some technical term, for instance, will it explain that?

Publisher.—That's just where its value comes in. See the Glossary of Fanciers' Terms.

Beginner.—By George, that's handy! Will it also tell me how to breed Canaries?

Publisher.—Certainly! And also how to breed Mules and Hybrids. There is also a chapter on keeping a pet bird, and a most useful article by Mr. Sam Drake on "Rearing Young Canaries."

Beginner.—I think I'll take a copy. Stay, though, I'm not only going in for Canaries; I may take up foreign birds.

Publisher.—Then you ought to read Wesley T. Page's chapter on "Some Pleasing and Beautiful Foreigners."

Beginner.—But suppose any of my birds become ill. Where shall I find this ANNUAL come in then?

Publisher.—Just where you want it, Sir. The chapter on diseases is arranged in alphabetical order, and is most comprehensive in character.

Beginner.—It certainly seems a valuable idea.

Publisher.—Valuable! It's worth its weight in gold. Why look here, Sir, in addition there's a chapter on "How to Identify the Call Notes and Song of British Birds," a review of the exhibition year, a breeding register, a show record, a cash account, a list of cage bird judges' names and addresses, a list of the bird trade, a list of breeders and exhibitors——

Beginner.—Stop! stop! man; give me a dozen copies. I'll take them away and distribute them to friends as a public duty. However it's done for the price I can't see. Look here, pack up every blessed book you publish, and let me know how much you want from me.

Publisher.—Thank you, Sir; always ready to oblige. You see, we publish our ANNUAL as an advertisement.

7½d. POST FREE FROM THE PUBLISHER, **7½d.**
F. CARL,

"CAGE BIRDS" GREAT
CANARY BREEDING COMPETITION.

A BOON TO THE FANCY.

£28 CASH IN PRIZES.

Two Sections: (1) NOVICES, (2) OLD HANDS.

1. Only Novice Breeders are eligible for the Novice Competition, a "Novice" to mean anyone who has never bred Canaries before.
2. The Prizes will be: **A**, Cup, value £5 (or Cash), First Prize; **B**, Cash, £3, Second Prize; **C**, Cash, £2, Third Prize; and **D**, Five £1 Cash Prizes for the next best in succession.
3. Prizes to go to the "most successful" breeders, meaning those of the competitors who are most successful in satisfactorily rearing the best average of healthy young birds during 1907. Canary breeding season now in progress.
4. The young Canaries must be bred by the competitors on or before July 15th, 1907, next. None bred after that date will be eligible.
5. All stock birds used must be the *bonâ fide* property of the Competitor.
6. Competitors must have the results of their breeding operations attested to by two responsible officials of any recognised Cage Bird Society, or may swear a declaration attested to by two responsible witnesses (form on application).
7. From now till the date of the Competition closing, August 17th, each issue of CAGE BIRDS will contain a Coupon, and when sending in the declaration competitors must enclose the whole series of coupons to show that they have been during the period regular readers of CAGE BIRDS.
8. The Editor's decision shall be final.

FIVE POUNDS Cash, or Cup to full value, at winner's option, is offered for the most successful Canary breeder of any experience. All breeders of one season's experience and upwards eligible. Same conditions as for Novices. The Editor's decision to be final.

We also invite the hearty co-operation of all readers in the following "rolling" scheme :—

THE "TELL SIX" PLAN.

By simply procuring SIX Signatures you may be able to win £6.

The plan is as follows: All you have to do is to tell six of your friends, unrelated to each other, about CAGE BIRDS' great Canary Breeding Competition, and persuade each of them to enter and tell six of their friends about it also. You send in to us the first six signatures to an undertaking to this effect, and if any of the signers are successful in our Canary Breeding Competition we will award you £1 for each successful competitor nominated by you. If any of the six people you tell fill up our forms as appended with signatures of six of their friends whom they have persuaded to enter, we will award them £1 for each successful competitor nominated by them. If two or more people nominate the same successful competitor the nomination prize will be divided amongst the successful nominators. The nomination forms must reach us by May 27, 1907, and the *bonâ fide* signatures and addresses in full of the competitors you have induced to enter must be given in each case. Here is the

NOMINATION FORM.

We, the undersigned, having carefully read, or had read to us, the rules of CAGE BIRDS great Canary Breeding Competition, agree to enter for the Competition and abide by the rules of same. We further, each of us, undertake to try and induce six of our friends to enter the Competition and tell six of their friends about it also :—

Full Name and Address.

1. .....
2. .....
3. .....
4. .....
5. .....
6. .....

The above are the *bonâ fide* signatures and the complete addresses of six intending competitors in CAGE BIRDS' Canary Breeding Competition, and I hereby nominate them to win one of your prizes. If any of them are successful I should like my prize money sent to me addressed as under :—

Name .....

Address .....

.....

Every form sent in, if properly filled up, will entitle the sender, whether a successful nominator or not, to a set of picture postcards, "Dickie in the Dumps."

All forms must be sent in on or before May 27, 1907.

You need not necessarily enter for the Canary Breeding Competition to win one of the nomination prizes. It will be sufficient if a breeder nominated by you on one of our forms is successful in winning one of our prizes. That is to say, if he or she is successful you will be successful. If there is any point you are dubious on, write—

F. CARL, 154, FLEET STREET, LONDON, E.C.

FORMS NOW READY. PLEASE APPLY.

Canary Breeding Competition.
MAY 18th, 1907. Coupon No. 6.

CLUB NOTICES.

No charge is made for notices of forthcoming meetings, but they can only be inserted once. Should secretaries desire to secure immediate insertion of their announcements **exactly as written** they can do so by prepayment at the rate of three words a penny.

Altrincham C.B.S.—May 28th, at Central Cafe, 8 p.m. prompt. Paper by Mr. J. Waters, "Novice's Experience of Breeding"; other important business; please note alteration in date.—T. Harrison, sec.

Birkenhead C.F.A.—May 21st, at Temperance Hall, 8 p.m. Discussion on rearing young birds and motion to provide cup for competition.—J. T. Harding, sec.

Bolton and Dis. O. and R.C.S.—May 20th at Joiners' Arms Hotel, Deansgate, 8 o'clock. Special meeting, business important; all members specially requested to meet.—J. Stringer, sec.

Bradford (East) O.S.—Members and friends are requested to meet at Farrar's Clothiers shop, Town Hall Square, on Whit Tuesday, at 1 p.m., thence to proceed by car to Allerton for a ramble to Harden and Bingley. Members must make their own provision for tea; no arrangements have been made in this respect, so as to make it optional for each to make their own choice. A hearty invitation is given to all fanciers and friends to join us. I might say that the ramble looks like being a success, as I have already received about 50 names of those who are desirous of joining us.—H. Hill, sec.

Bristol C.B.S.—June 5th, at Crown Hotel, 8 p.m. General business; lecture (cage making).—J. Munro, sec.

Cambridge and Cambs C.B.S.—May 29th, at Headquarters, 8.30 p.m. Discussion, "Management of Cage Birds," opened by Mr. Green.—T. S. Moore, sec.

Crewe O.S.—May 21st, at Nag's Head, 7.30 p.m. Arranging for Members' Shows and Table Show, etc.—A. Wilkinson, sec.

Crook and Dis. C.B.S.—May 18th, at Love's Hotel, 7.30 p.m. Lecture by Mr. J. J. Bright, "Management of Cage Birds"; all fanciers cordially invited. —W. W. Rutherford, sec.

Derby C.B.C.—May 25th, at Victoria Street Congregational Schoolroom, 7 p.m. Half-yearly meeting; nominating young birds (members must attend or send their nominations); cup for points special; and other important business.—W. H. Bamsey, hon. sec.

Dulwich and Peckham C.B.S.—May 23rd, at the Herne Tavern, Peckham, 8 p.m. Extra special general meeting re the Cage Bird Union; deletion of latter part of rule 17; definition of a novice; members asked to make special effort to attend.—W. Hodson, sec.

Ealing, Hanwell and Dis. F.S.—May 23rd, at Mission Hall, Hanwell, 8 p.m. Members' Show of Young Birds and British and Foreign Birds; Mr. H. Knight will judge; lecture on the Yorkshire Canary; visitors welcome.—W. Bird, hon. sec.

Farnworth and Dis. C.B.S.—May 19th, at Old Post Office Inn, 7.30 p.m. Classification and judge for First Feather Show.—W. Dawson, sec.

Gt. Harwood and Dis. C.B.S.—May 22nd, at Headquarters, Church Street, 7.30 prompt. C.B.U. and other business; please note change of day.—F. Sharples, sec.

Green Canary Association.—May 23rd, at Oldham Hall, Renshaw Street, Liverpool, 8 p.m. Judge and schedule for Young Show; uniform cages, etc.—S. Hadwin, sec.

Hamilton Cadzow Oaks O.S.—May 18th, at Royal Hotel, 7.30 p.m. Selection of judges and classification for Open Show.—R. Gadsden, sec.

Hartlepools C.B.S.—Annual excursion to Wynyard Park on Whit Monday. Brake leaves Y.M.C.A. Rooms at 12 noon. Tea at Wolviston. All intending to join please notify hon. sec., in order that arrangements may be completed.—E. Woodhead, sec.

Hyde and Dis. C.B.S.—May 20th, at St. George's School, 8 p.m. Important business.—T. Allsop, sec.

Kircaldy C.B.S.—June 12th, at Recreation Rooms, High Street.—J. Wilson, sec.

Leicester C.B.S.—May 22nd, at Headquarters, 8 p.m. Lecture, "Colour Feeding," by Mr. T. Ride; arrangements for Nest Feather Show, etc.—J. Heighton, sec.

Metropolitan Association of C.M. and H.B.—May 23rd, at Crown Hotel, Lavender Hill, S.W., 8.15 p.m. Lecture by T. R. Trower, Esq., on "Seeds and their Use"; all fanciers heartily welcome.—A. J. Head, sec.

Morriston and Dis. C.B.S.—May 25th, at Woodfield Street Coffee Tavern, 7.30 p.m. Table Show of British birds and Mules; Class 1, Greenfinches; 2, Chaffinches and Bramblefinches; 3, Mules; judge, Mr. Harding Williams.—D. Jeremy, sec.

Newcastle and Dis. C.B.S.—Special meeting, May 23rd, at 65, Grainger Street, 8 p.m. C.B.U. rule 17.—Curry and Hutchison, secs.

Northern Crest Club.—May 23rd, at Station Cafe, Sunderland, 7.30 p.m. C.B.U. business; definition of novice, etc.—Thos. Robson, sec.

Pendleton and Salford O.S.—June 6th, at Derby Arms.—W. Jackson, hon. sec.

Seaham Harbour and Dis. C.B.B.A.—May 18th, at Station Hotel, 7. Fix date for First Feather Show and other important business.—J. M. Nicholson, sec.

Southern Norwich P.C.—May 23rd, at Raglan Hotel, Aldersgate Street, E.C., 6.45 sharp. Committee meeting; Cage Bird Union. General meeting, 7.30 p.m.; type of Norwich.—F. S. Matthes, hon. sec.

Spen Valley C.B.S.—May 17th, at Northgate Hotel, 8 p.m. Special business.—A. Whitehead, sec.

Stockport B.F.A.—May 21st, at Boar's Head Hotel, 8 p.m. Allotting specials for First Feather Show; discussion and voting on Cage Bird Union rules; members urgently requested to attend.—W. Stafford, sec.

Sunderland C.B.A.—May 25th, at Fawcett Street Cafe, 7.30. Members to vote in respect to rule 17 of Cage Bird Union rules, also novice.—F. Gordon, sec.

Swansea and Dis. C.B.S.—May 23rd, at 7.30 p.m. Classes for Siskins, Redpolls, Chaffinches, or Bramble and A.O.V.; judge, Mr. J. E. Jeffries.—A. Hitchings, hon. sec.

Watford and Dis. C.B.S.—May 22nd, at the George Hotel, Watford, 8 p.m. Adjourned general meeting; balance-sheet, fixing Autumn Show, and to consider the advisibility of holding monthly shows, etc.—R. Watts, sec.

West Bromwich C.B.S.—May 22nd, at Green's Refreshment Rooms, 12, Bull Street.—T. Duffield, sec. pro. tem.

Whitburn and Dis. C.B.S.—May 31st. All members and intending members requested to attend.—T. Duncan, sec.

Mr. J. Wilcock will judge Burnley First Feather Show, on June 15th.

QUESTIONS & ANSWERS

DOUBTS AND DIFFICULTIES SOLVED BY SPECIALISTS.

Queries will be answered under the following conditions:—

(1)—*All questions must be clearly written in ink (or typewritten) on one side only of paper, and must conclude with either the correct name of querist, or a pseudonym, or initials.*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper and enclosed with the query. In no case must the address appear on the query.*

(3)—*Queries intended for different specialists must not be written on the same sheet of paper.*

(4)—**Queries must not include** *or be included in orders for books, instructions re advertisements, or any other matter for publication.*

(5)—*The department to which the queries refer must be stated in bold letters on the left-hand corner of the query.*

(6)—*If an answer in the same week's issue is desired, queries must be posted to reach us by* **Monday's first post** *at latest. Queries will be dealt with in the order in which they are received, and only as space permits. The earlier queries are received the better attention they are likely to have.*

(7)—*Queries relating to illnesses of birds, except enquiries as to cause of death (for which see Post Mortems) will be answered by return of post on receipt of a postal order for sixpence and an addressed stamped envelope. Queries of an ordinary nature will be answered by post, if desired, on receipt of a postal order for one shilling and a stamped addressed envelope.*

(8)—*All who require letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence to pay postage expenses, &c., otherwise their letters will not receive attention.*

(9)—*All queries must be addressed* **the Editor, "Cage Birds,"** *154, Fleet Street, London, E.C. Only queries so sent will be answered. Postcards are not admissible.*

NOTE.—Readers are requested to carefully study past numbers and current issue before submitting questions. By doing so they may save trouble and unnecessary repetition.

THE following gentlemen represent CAGE BIRDS staff of **ADVISORY EXPERTS.** Queries must in no case be addressed to any of them individually, but to the Editor.

CANARIES.

NORWICH PLAINHEADS.

Answered by J. H. PAYNE.

The Great and Small.

A.J.L.—No, it is not by any means a rare occurrence for a hen Canary to lay a very small egg amongst a clutch, and for the others to be fertile. I have seen them as small as a pea. I am pleased to hear all your other eggs are fertile, and trust the hen will be in the mood to feed and rear the young as well as she has the others.

Egg-bound or What?

A Lover of Norwich Plainheads.—Stop the milk sop, and give instead, three times a week, a small teaspoonful of egg food, to which add six drops of Parrish's Chemical Food. Let her have a pinch of maw seed three times a week, and in other respects feed as you have been doing. I should recommend you, the next time she makes her nest, to take the cock out in the evening and return him in the morning. I rather think from what you say that the hen has laid and the cock has probably eaten the eggs, but if you do as I suggest, you will soon see. I think if she lays after making another nest you might reasonably assume that the cock is not a safe one to keep with the hen, so after she has laid her third egg take him away and let the hen rear the young herself. To make sure that he is an egg eater you may put one in the nest, and then quietly watch him from a distance.

Not an Incubator.

J.L.B.—I think your hen will most likely do better now the weather is warmer. She was hardly in full breeding condition, and probably was a late hatched one. Take her away from the cock for a week, and feed as you have been doing, except that you might add to the egg food five drops of Parrish's Chemical Food.

A Non-Builder.

W.H.E.—Your hen is evidently out of condition or else an old one, and gone beyond breeding. It would have helped me to have given you a more satisfactory reply had you have given me the age of the hen if you knew it. I should advise you to take her away from the cock for a fortnight and feed as you have been doing, except that you add to the egg food six drops of Allen and Hanbury's Byno-Phosphates, and on the days she is not having this give, in the drinking water, ten drops of tincture of quinine. Also give, three times a week, a pinch of maw seed and a few young dandelion leaves. Let her have as much fresh air as you can when the weather is nice and genial.

How and When to Buy.

Ignoramus.—(1) The best time for you to purchase stock birds for next year's breeding would be about November. They will then be through moult, that is, those that are likely to make good stock birds. (2) It is quite a matter of choice whether you buy clears, ticked, or green. I should say have some clear and some marked, pairing a clear to a marked or ticked bird. (3) I should recommend you to pair a yellow to a buff, and vice versa, as you seem to have had no previous experience. (4) You should get a pair of stock birds likely to produce you a winner for about £2, if they come from a good strain.

Soft Moult.

Nonplussed.—No; it is not absolutely necessary for Canaries that have fallen into a soft moult to have a complete moult before they are fit to breed. Some will go right through whilst others will stop as yours have apparently done. You may get a nest from yours this season, but you will need to get them into as high condition as you possibly can, and not put them together until they are thoroughly fit. Give them, three times a week, a small teaspoonful each of egg food, to which add six drops of Parrish's Chemical Food. On the days they are not having this, put in the drinking water ten drops of tincture of quinine; also give them some young dandelion leaves two or three times a week. Let them have plenty of fresh air when the weather is genial. Give, three times a week, a pinch of maw seed to each bird, and a little hemp seed.

What Sex a Singer?

Walser.—I see no reason why the five eggs your hen has laid should not prove fertile; in fact, I should say they are, and as she was with the buff cock until within three days of your putting her with the yellow cock and the laying of her first egg, I think you may safely assume the eggs will be fertilised by the former; but there is a possibility of your having one or two fertilised by the yellow. (2) Yes; it is quite possible for a pair of good feeders to bring up a nest of six youngsters. (3) Your query, How can one tell the sex of a supposed singing hen, caused me a little mental worry until I suddenly ran up against myself, as it were, with the full conviction that, after all, it must be a hen just the same. I presume you mean how can one tell a singing hen? There should be no difficulty now, at this time of the year, in telling the sex of a bird to a fancier of experience; if you know one near you, get him to have a look at yours. As you say yours sings well but will not pair to either a cock or hen, it is difficult to hazard an opinion without seeing it. (4) Yes; a hen Canary would no doubt hatch and rear a Sparrow, and if you wish to try the experiment, place the egg with the hens on the evening of the day on which she laid the third. I cannot tell you what a Sparrow-Canary Mule is like, as I have never yet seen one.

Is it a Chill?

Esperantist.—Give your bird that you think has caught a chill, in the drinking water, for three days, ten drops of acetate of ammonia, fresh daily. As you say he is singing, and looks and keeps tight in feather, I am of your opinion, that the warmer weather will soon bring him round, and he will lose the noise which emanates from the nostrils. (2) I prefer the hard-boiled egg and Osborne biscuit to the cake you mention, but in my opinion there is nothing to equal egg and genuine home-made bread, if one has the time to mix it up fresh twice or three times a day; but where a breeder has only time to mix his food up once a day, then biscuits are better, as food keeps better.

YORKSHIRES.

Answered by H. W. BATTYE.

Not Feeding.

R. B. W.—There are many reasons that may be given as likely to have been the cause of your pair of birds giving up feeding their young, probably their natural desire to again go to nest was the principal cause of your misfortune. It is very grieving when the young ones get to a fortnight old, and then the old ones let them die of hunger, but we bird breeders have to make the best we can of these things, and hope for better luck next time. I should advise you to take away the cock on the same night as the hen lays her third egg, when the hen will in all probability do all right, and will not want to nest again so soon as when the cock was running with her all the time.

Mating a Trio.

No Name.—You say you have two Yorkshire hens and a cock, and wish to know whether it would be best to put all three into one large cage, or put cock and one hen together until she has laid, and then remove cock and pair him with the other hen. The latter is by far the best and safest course, or if both hens were very "proud" you could run him with one hen, a few hours at a time, and then put him with the other for an hour or two, or if this is inconvenient for you through being away from home during the day, run him with one hen from tea-time to, say, seven or eight o'clock in the morning, and then put him to the other hen during the daytime.

Why Did They Die?

T.C.R.—Your mode of feeding is quite correct, and no doubt the cause of your young birds dying when from seven to ten days old will be the cold unseasonable weather we have been having of late. During such weather it is not advisable to give over much green food. Just a sprig or two fresh twice or thrice a day. If you have a hen that seems to be getting a little slack in her feeding, and does not feed without it, I should advise you to give as much as she wanted. Care should be taken that all green food is washed perfectly clean, and that it has not a touch of frost about it; if it has, this will very quickly upset the young ones. A good way to make sure there is not frost upon it, is to keep it in the living room for, say, half an hour or so before giving it to the birds. You need not be downhearted, as you are not alone in losing young ones. (2) There are many reputed ways of curing sweating hens, but few are successful during the existing round. I am afraid in many cases it is caused by weakness, and in others nervousness, owing to being disturbed; giving green food too soon after hatching will sometimes bring it on. During the early spring, when the weather is generally on the cool side, it is safest not to give green food till the young ones are at least five or six days old, and then it should be given sparingly till they are ten days old. A bath is generally of service to the hen when showing signs of sweating, just a dip, and then taken away.

Change of Quarters.

E.H.—I will answer your last query first. Yes, by all means remove them into the other room upstairs, taking them into their fresh quarters as early as you can in the morning, which will give them a much better chance to get accustomed to the change than being removed at night, as the temperature will be at its lowest in the old quarters. The birds have the whole day before them, be constantly on the move, and will hardly notice the change. Your cage is all right as to size, etc. When the hen had only hatched two young ones out of five eggs, you should have left at least one of the eggs in the nest, as this acts as a good support for the young during the first week or so. The cock is evidently trying to drive the hen to nest again, and as soon as the old young one you have left leaves the nest, I should give the hen a fresh nest, and if the parents do not pluck the youngster, allow it to remain with them, but if they molest it, then you must hang it in front of breeding cage in a nursery cage, a Yorkshire show cage will do, and when your hen has laid her third egg, next round, remove the cock; the hen will probably do better by herself, and rear more young ones. Do not feed on egg food during the time the hen is sitting. Give plain canary seed in the hopper as a staple diet, and give separate, every two or three days, a teaspoonful of good summer rape; let this be the only food while the hen is sitting. When she hatches, give a little egg food first day, and just a little crushed hemp, along with egg food, and one or two sprigs of green food until the young are seven or eight days old, when you may give them as much hemp and green food as they will eat. I do not care to use soaked rape seed when it is possible to get green food fresh and good, either dandelion, lettuce, or watercress. The egg food you make will do very well.

CRESTS AND CRESTBREDS.

Answered by W. E. GREEVES.

Crested Cock Unwell.

G. Lowery.—Your bird appears to be suffering from lung trouble, no doubt caused by a chill. Your feeding has been correct, but now, instead of the egg food, give this bird bread and milk prepared as follows:—Cut a small square of bread, over which pour sufficient milk to well moisten the bread; put this in a tea-cup and stand in a saucepan of boiling water for five minutes, then take out and let it cool; over this put four drops of syrup of tolu. Continue this every day for a week; be careful that the milk is quite sweet. To the drinking water add six drops of whisky. At the end of the week, if the bird is better, discontinue the above and, instead of the whisky, add a few drops of Parrish's Chemical Food to the water. You may continue canary seed as a staple food, and a pinch of maw seed twice a week; also German summer rape twice a week, but no green food. A small quantity of linseed twice a week would be beneficial if it will eat it. A bed-room is not an ideal place to keep your birds in; it would be better if they could be kept in an airy, well lighted and ventilated room. Personally I do not consider it healthy to keep birds in a room in which one sleeps; if you can possibly find another room for them I should advise you to do so. At the same time I have to admit that I know of instances where birds are kept, and that successfully, under like conditions.

SCOTCH FANCIES.

Answered by R. WRIGHT.

Tollcross.—Your hen will be a very nervous bird. Keep her nice and quiet. She will breed all right. I have had the same myself many times. The cock will come all right when the pens are shooting; he will get stronger in song as the weather improves. This has been a very severe winter on birds that are the least touched.

LIZARDS.

Answered by BARKER CLEGG.

When to Commence Colour Feeding.

W. Lomax.—It is an unnecessary practice to commence feeding young birds with colour food immediately they begin to feed themselves. With first nest birds start when eight weeks old, second nests seven weeks, later nests six weeks. Commence by using one teaspoonful of colour food to 12 of egg food (one twelfth part), gradually increasing weekly until you are using half of each; continue this until your birds are finishing the moult. Particularly notice that the cap is clear from pen feathers before you commence reducing the quantity of colour food. I use one part Natal (hot) to three parts of (cold) colour food. Write again at any time. I shall be pleased to assist you.

ROLLERS.

Answered by "SCHOOLMASTER."

Taking Cock Away.

G.B.A.—Some breeders of Roller Canaries run their cock birds with even more hens than two, so there is no reason why you yourself should not do the same thing. German hens are noted for being good mothers, and it is not necessary to leave the cock with them while the young are being reared. Take the cock bird away from the hen which is now sitting, leave him for a day by himself, then put him along with the second hen, which you say seems ready to go to nest. If you put him back with the first hen the day after she hatches, he would no doubt help her feed the young; but it is not necessary to do so.

Bare at Neck.

A.M.W.—The most general cause of loss of feathers, especially round the head and neck, is the attacks of red mite. Is your bird free from them? Throw a white cloth, or handkerchief, over the cage at night (two or three nights, if necessary), when close examination in the morning is almost sure to show red-mite sticking to it, if any be present. Should there be any, the cage will have to be well scalded with boiling water or soap-suds, and the bird be well dusted with harmless insect powder, such as Keating's or pyrethrum. For full details of treatment see the ANNUAL. If you can find no trace of the mite, I don't know that I should bother about the loss of feathers as long as the bird sings and seems healthy. It is a fact that many Rollers seem liable to go bare in places, and it will come all right when he moults. You can, if you like, gently rub the bare spot with a little hazeline ointment once a day, leaving it off immediately you feel new quills pushing through. You do not say whether the bird is singing or not now; if off song, I should certainly think red-mite are troubling him.

Clear Eggs.

Not to be Beaten.—Your letter is long, but my answer will be short, though, perhaps, not sweet. I advise you to get another cock bird. You say that he is in full song, has mated freely with two different hens, yet four nests of eggs have proved entirely clear. Get another cock, by all means. None of the circumstances you name would account for clear eggs—the conditions under which you have the birds seem, in fact, quite good. You say the cock bird sired young last season. But that was not with you, and personally I should judge by his performances with me rather than by what I was told.

MISCELLANEOUS CANARY QUERIES.

Answered by "OLD JUDGE."

Hen not Laying.

Hen made a nest and has sat regularly in it for about a month, but has laid no eggs. She appears to be very healthy, and I looked upon her as my best hen, putting her with a specially good cock. Can I do anything to persuade her to lay, or shall I get another hen? She has plenty of green food, fresh seed, and water every day.—L. A. FOOT.

L. A. Foot.—If you had given your hen a little egg food daily from the time of pairing up, she might possibly have laid. I should advise you to separate the pair for about a week. Give twice daily to each of them egg food, sprinkled with unaw seed, and in addition to the ordinary canary seed, which should be given by itself in the hopper, give on alternate days to each bird half a teaspoonful of inga or hemp seed. This can be given in a small tin, or on the floor of the cage, and don't forget a bit of green food. Let them have a bath every other day. At the expiration of the week return them to the breeding cage, and continue the treatment here advised.

Hen with One Egg.

W. J. Banks.—Your questions are somewhat involved, and I really cannot get at your meaning. If the hen has only laid one egg I should not advise you to let her sit. The earthenware or terra cotta nests are the best; they can be lined with felt, which I suppose is what you mean. When a hen lays in a normal manner, the eggs should be returned on the evening of the day upon which the third egg is laid. I have done my best to get at your meaning, and hope I have succeeded. Please don't write on the back and front of an envelope again, and let each question be clear and distinct. I much regret to hear of your ill-luck, and if I can in any way assist you to better things, shall be most pleased and happy to do so.

Birds Out of Condition.

Allan Roberts.—I am delighted to know that the treatment I recommended for the birds which had been in the soft moult has pulled them round, and equally sorry that the yellow variegated cock is no better. I am afraid he is past hope. The symptoms you describe point towards his early death. The treatment I recommended will relieve him, but cure I believe is impossible.

The Needs of a Beginner.

(1) A large attic facing south, gets all the morning sun. Can I use it for Canary breeding? It has a window 5 ft. long and 3 ft. wide, and will open about 18 in. from the top. Would the birds have sufficient air, as it is very warm? (2) Would you advise me to take up Norwich Plainheads? I want to breed for show. (3) Which is the most popular colour. (4) Am I too late to commence breeding for exhibition? (5) I have a nice home-made cage measuring 30 in. long, 18 in. high, and about 15 in. deep (single). Is this too large for Canaries?—C. N. BEGINNER.

C. N. Beginner.—(1) Your attic should do very well for a bird room, and the space, 18 in. by 3 ft., should give you plenty of ventilation, except in very warm weather, and then it would be advisable to have the door wide open all day, using a wire frame to keep out the domestic cat, and to prevent a bird from escaping, should one happen to get out of its cage. The window should also be wired in the same manner. (2) If you are fond of Norwich Plainheads, then most certainly make a start with that variety. You are more likely to be successful with a variety of which you are fond than of one which you are not. (3) This question I hardly understand. The two colours are yellow and buff, and birds of each are equally plentiful, and equally popular. (4) If you commence at once you could manage to get one nest of young this season, but I should advise you not to attempt more, as the birds would not moult through in time for the autumn shows. (5) Your cage is not too large. Such a cage would give your birds plenty of room for exercise, and this is most desirable.

Is Colour Feeding Detrimental?

Do you consider colour feeding in any way detrimental to the health or longevity of the bird? When is the right time to start it, and what best to give them? One pair of birds, when finished laying, pulled all the nest out, leaving eggs in bare pan, and sat on them—spoilt. What was reason?—MONTAGUE.

Montague.—Colour feeding carelessly practised will undoubtedly be detrimental to a bird's life and health. In the hands of sensible men colour feeding will not harm birds, but in the hands of those who know not the meaning of the word reason, harm may result. But you must understand that the basis of all—sweet or cool—colour feeds is a vegetable of a perfectly innocuous character, which cannot, unless given in absurd proportions, do harm. The best time to start colour feeding is when the young birds are about seven or eight weeks old, mixing a small quantity at first and gradually increasing. It would be impossible to say why your birds pulled out the nest lining. The eggs were probably spoilt owing to the heat escaping from the openings in the pan.

Canary Wheezing.

R.T.H.—Give your bird each day a little milk sop, prepared in the way recommended by Mr. Greeves under Crest Queries to-day, and in its drinking water mix 10 drops each of paregoric and syrup of squills. Give the ordinary canary seed, and in addition give on alternate days half a teaspoonful of inga and German summer rape seed.

Weak on Legs.

Canary, with very hard breathing, sleeps very nearly all day, and very weak on its legs.—EVERTON.

Everton.—Give your bird each day a little milk sop, well sprinkled with maw seed. Continue the seed which you are giving, and in its drinking water mix 30 drops of Fellow's Compound Syrup, fresh each morning. You might also place a piece of beef suet in the wires of its cage about twice a week. This treatment should also prove useful in the other case which you mention.

No Results.

Yorkshire cock and German hen together six weeks, hen not laid, plays with nesting, does not build, feed each other. Fed on canary, rape, inga, maw, and hemp seed, egg food twice a week, green food daily. Will the hen lay as it gets warmer, or does she need a different mate?—H. J. M.

H.J.M.—As the season is half over, time is precious, and you cannot afford to wait for this hen any longer. I should advise you to give each of them fresh mates. It is difficult to say which is to blame. Your feeding is all right, except that you might give the egg food every day, and stop the hemp. It often happens that although two particular birds will not mate together, they will, if given fresh partners, commence housekeeping at once.

BRITISH BIRDS, MULES AND HYBRIDS.

Answered by G. E. WESTON.

Handrearing Goldfinches and Bullfinches.

Bird Lover.—Neither Goldfinches nor Bullfinches are difficult to bring up by hand, providing the two principal rules connected with hand-rearing are duly observed, viz., to feed a little at a time only from dawn to dark, and to keep the nestlings scrupulously clean. I don't believe in taking them from their parents at too early an age; let them show their feathers nicely before you remove them. The food to be used is the usual kind—that is, egg and biscuit. Crush two Osborne biscuits, and well mix with them the yolk and half the white of a hard-boiled egg, using a fork to do this with,

one with thin prongs. When feeding take the required quantity of this mixture, and make it the consistency of thin paste (or of cream) with new milk. See that it is always sweet and free from the slightest taint of sourness. It must be made fresh at least once daily. A few small cut-up pieces of mealworm may be dipped in milk and popped into their mouths pretty frequently; likewise any house flies you can capture should also be fed to them. As the youngsters grow, add a little soaked summer rape to the stock food. Steep the rape seed in cold water, which thoroughly change every day. It will soon begin to germinate (burst), and is then ready for use, dabbing it as dry as possible in a towel before mixing it with the soft food. When they begin to pick up for themselves, wean them on to soaked rape, maw, lightly-cracked canary and hemp seeds, hulled and broken up sunflower seed kernels, seeding chickweed, shepherd's purse, and groundsel tops. I have had them pick up ants' eggs with relish; in fact, I often mix some amongst the food I hand-feed with. For the benefit of other readers of this column, I may say that by following this procedure any seed-eating British bird can be successfully hand-reared. Foreign bird queries should be written on a separate sheet of paper; read rules.

Hand-rearing Chaffinches.

E.S.M.—Young Chaffinches, in common with other young Finches, should be taken when about ten days old, not before. Feed exactly as advised in answer to "Bird Lover" this week. They will soon let you know when they feel like "picking up" a bit of food for themselves. They do this some time before it is wise or possible to discontinue the hand-feeding. No; Chaffinches are not at all difficult to bring up by hand, providing one has patience, and also the time to devote to the proper carrying out of the task.

More Young Birds; also Mealworms.

No Name.—I cannot tell you where or from whom you can purchase young Nightingales, or other of the rarer British birds, for hand-rearing purposes. If I did, I should be exposing whoever I mentioned to prosecution, for, as surely you know, it is illegal both to take and be in the possession of young wild birds. I cannot trace your locality from the query, so cannot say whether the birds breed in your neighbourhood. Young birds ten or twelve days old would not stand any long train or other journey, however, unless personally tended en route. You might advertise your requirements in CAGE BIRDS, if you choose, and see if you can get into touch with someone close by you who could obtain the youngsters you desire. It certainly is not necessarily a sign of ill-health when Thrushes stand on one leg—what curious notions some bird-keepers get! See another reply on this point this week. I think it would puzzle you to give a Thrush too many mealworms—your pocket would ache long before his "Little Mary." One mealworm per diem is certainly not too many for a Goldfinch, or a Bullfinch, or for matter of that any bird which cares to eat mealworms. I quite agree with you that for Goldies, etc., they are very good, as an occasional treat.

Crissel and Meat Meal.

Young Reader.—Crissel is the same as meat-meal, if obtainable in its finest form—it is the trade name given by a certain firm to this preparation of meat, which is made in three (I believe) grades, coarse, medium, and fine, the latter being the one for cage bird keepers to use, though the others, when soaked in hot water, are useful for some of the coarse-feeding, large birds. When I ask for meat-meal at good corn shops, I never have any difficulty in obtaining it. It is a widely used article by live-stock keepers.

What Does it Mean?

Mug at the Game.—It simply means, my friend, that your hen is not quite in rank breeding condition. Many hens put a bit of stuff in the nest-pan, then carry it out again, for several days before finally settling down to build in earnest. Before you read this, in fact, she will probably have started to put her nest together in a hurry. If the cock Goldfinch makes himself a nuisance for part of the day, your course is clearly to take him away from the hen and the nest during that period. It is only essential that he should be with her for an hour morning and evening—less than that if he promptly behaves as he should towards her. I can quite believe a seven year old Linnet will breed, if still in vigorous condition.

Hen Mules as Feeders.

Melbourne.—I don't advise you to turn an unmated hen Mule loose in your aviary amongst the breeding couples. She would probably only be mischievous and troublesome. You seem to be under a misapprehension: Hen Mules make good foster mothers, but that does not mean they will go about from nest to nest popping food into the mouths of young birds they think the rightful parents are neglecting. Oh, no. Give a hen Mule fertile eggs from another hen which is a bad mother, then she will play her part. You could use two or three more hen Canaries, if you choose.

Enamel for Show Cages.

Cornwall.—The best all-round colour is very dark (holly) green. If you have this on the insides and the wires, the cages will do to hold practically any bird. All the Mules you mention would look well in front of it (Goldfinch, Greenfinch, and Linnet-Bullfinch, and light Goldfinch and Linnet-Canary). Some would probably prefer a very light green or blue for the Greenfinch-Bullfinch. You could do a cage in this colour, and see which you think suits him best.

To Ensure Fertile Eggs.

A. J. Gander.—I find your question somewhat difficult to understand. To ensure fertile eggs it is only necessary for the cock bird to be with the hen two or three days before she lays. If you drive matters too fine, however, there is danger of the early eggs of the clutch proving unfertile. I have known hens hurriedly mated after they had unexpectedly dropped the first egg, and the last two or three eggs of the clutch have proved fertile. In fact, I have myself had a hen produce both Linnet and Goldfinch Mules in the same nest—showing that my Linnet fertilised some of the eggs and my Goldfinch the remainder. Does this answer you? Don't mate your hen again until she has had a rest; and don't write with blue ink on blue paper—I have my eyesight to preserve.

Handrearing Thrushes and Blackbirds.

T. Nagle.—It seems incredible I should be asked again how to hand-rear Thrushes, etc., when only a fortnight ago I explained at length how to do so. As you are so very new a reader, however, I suppose I must forgive you. Blackbirds and Thrushes are very easy to rear from the nest, and many people do so on nothing but bread and milk. Equal parts of stale bread and best ants' eggs (freed from rubbish), made very moist with new milk, would be a very fair food. To rear strong, lusty youngsters, however, the method I prefer is as follows:—Boil a fresh egg ten or twelve minutes, and, when cold, well mix with a fork the yolk and a little (say a third) of the white into two crushed Osborne biscuits; add to this a tablespoonful of best ants' eggs (removing bits of stick and rubbish, if present), stirring all well together. Just before you feed, take the necessary portion of food and make it into a sloppy consistency with new milk. In hot weather (and at all times) be careful the food is always fresh and sweet. Feed a little at a time only, but very often, from dawn to dusk; and a feed after dark is not at all a bad thing. Cut a few mealworms into pieces, also, dip them into milk, and drop them into the nestlings' mouths. As the youngsters grow, too, a great many fanciers add now and then a pinch of small, but sharp and gritty sand to the food; I often do so myself. It seems to act as a preventative of looseness of the bowels (or diarrhœa). Give also at all times flies and like small insects; and live ants' eggs if you can get them. Young birds want feeding once an hour (do not "stuff" them at any time) at first; every two hours or so at later stages. Cease hand-feeding when they cease to "cry" to be fed, and are picking up food for themselves. Keep the young birds warm, cosy, and scrupulously clean. No special appliance is necessary for the feeding. I have used a large, blunted (with a pen-knife) match stick with every success; likewise a quill toothpick with all sharp corners removed. The handiest implement I ever possessed, however, was a little bone mustard spoon, which I cut to a suitable shape and different sizes at each end (handle and bowl), and smoothed off with very fine glass-paper. Different fanciers have different ideas though, and once used to a certain thing cannot feed with any other. I expect many, too, will be trying the glass syringe idea, shown in an illustration in the January "Bird World Magazine." Put the food well down at the back of the tongue, and always be careful not to bruise or lacerate the tender mouths of the nestlings.

Are Greenfinch Mules Worth While?

Joe.—I most certainly think Greenfinch Mules are worth breeding. If bred from parents rich in colour they come a beautiful tone of colour themselves, and the cocks can always be depended on to turn out good songsters, though hardly so free in this respect, generally speaking, as Goldfinch and Linnet Mules. There is almost as ready a sale for cock Greenie Mules as for the latter, and more buyers than there are birds, so far as good exhibition specimens are concerned.

Some Ailments.

Miss U.—The case of the Greenfinch reads like a slight cold, no doubt acquired during the recent changeable weather, and, if so, I cannot recommend any better medicine than the bronchial syrup now being used. The symptoms ("gasping") are often premonitory of liver trouble, however, and, if the syrup affords no relief, try half a teaspoonful of taraxacum (dandelion juice) in two tablespoonfuls of drinking water, fresh daily, over three or four days. I think the hen Bullie is going along very nicely; the fact of her sleeping peacefully points that way. I should reduce the dose of the syrup, and give it at intervals only. You could not do better than try Zam Buk on your Thrush's leg. You are quite right; I recommended it some time ago in this column. I have used and found it good. As to it "performing miracles," however, you must use your own judgment.

On One Leg.

Stump.—If I were thinking of wagering on the matter, I should bet more birds sleep on one leg than on two, so clearly there is nothing extraordinary in the fact of your own bird journeying to the land of Nod on one leg. I have observed, by the aid of my binoculars, that a great many birds out in the fields sit at ease on one leg (make it "stand" if you like) when indulging in a spell of singing. To use one leg only, and tuck the other up close to the body, would seem to be, to a bird, a very restful pose. Have you never heard of the yarn that birds which sleep on one leg (say the right) are cocks, and those which sleep on the other are hens? Many a "green" fancier has been "had" with it.

From Open to Box Cage.

Novice.—Your Thrush is sure to take a week or two to settle down in his new home and fresh surroundings. Being used to an all open cage, the change that a box cage must be is a great one. But, never fear, the change is all for the bird's benefit, and he will sing out just as stoutly as ever in a few days time, I'll wager. Mix a teaspoonful of finely-minced fresh cream cheese amongst his daily food allowance three times a week for the next fortnight.

Canary-Gouldian Finch Hybrid.

L. A. Foot.—Your query got accidentally put amongst mine. Our Mr. Page will reply to it next week. In the meantime I will hazard the opinion that he will be unable to speak favourably of your chances of success in mating a cock Canary to a hen Black-headed Gouldian; very interesting to try, I should imagine.

Concerning Nightingales.

O.S.—You are a little too early yet for young Nightingales. As far as I have been able to observe, the wretched weather has kept all the migratory birds backward. It was only during the hot spell last Saturday and Sunday that I observed Whitethroats, Willow and Wood Warblers, and the like, mating, though some have been with us weeks. I guess you are quite right in assuming the pair you saw had not commenced domestic operations. The traps used by most fanciers are the spring-over net traps; they have been advertised lately in our columns. They are quite simple in use; the setting explains itself, and the frame only needs artistically disguising with dead leaves, etc.

Thrush with Scaly Legs.

H.B.—Make some olive oil nicely warm by standing it in hot water, and well soak the scaly legs with this, afterwards gently removing the scales with the finger-nails or the point of a pen-knife blade. Be careful, of course, not to break, or put out, a leg. If you accidentally cause the legs to bleed, paint with Friar's Balsam. Otherwise, when you have finished, just dress them with lanoline or vaseline, or Zam Buk if you like. A bird soon gets over the operation, and is, of course, very much the better for it afterwards, especially when troubled to the extent your Thrush would seem to be. If painful to him, it is only natural he should go off song.

Song Thrush "Off-Colour."

T.N.—I can only say again, as I have said to others so many times in the past, that you are not feeding your Thrush sufficiently well. The fits and weakness all point this way, when considered in the light of the methods outlined in your letter. It is not sufficient to buy a packet of somebody's food (no matter if it boasts a thousand testimonials), and give it month in and month out, mixed with just a spot of two of cold water. The food needs properly mixing, and the bird needs insect life in addition. Proceed on the following lines: Damp the quantity of food required for use with grated raw carrot, or finely chopped tender dandelion, chickweed, lettuce, watercress, etc., according to season, or cold boiled potato, or even a little ripe fruit, varying it as much as possible. Give a few mealworms daily, and any live foods you can get in season—for instance, smooth caterpillars, flies, spiders, wasp-grub, gentles, earwigs, beetles, cockroaches, small garden worms, and the like. A little ripe fruit and various berries, sweet apple, pear, split grapes, orange, red and white currants, banana, etc., straw, rasp, black, privet, elder, haw, etc., berries are also relished. Into the stock food a proportion of preserved yolk of egg (flake) should frequently be well mixed; or a hard-boiled egg; or a little finely-scraped raw lean meat makes a nice change at times, but should not be overdone. Get a bottle of cod liver oil with hypophosphites from a chemist, and every day well incorporate half to a small teaspoonful with the bird's food allowance. Use only a little at first, and gradually increase to the full dose. This treatment should soon make a "new man" of him.

Linnet with Swelled Feet.

F. W. Martin.—Bathe the legs and feet daily with nicely warm water for a few minutes, then dry with a soft cloth, and gently massage the swollen parts with a little Zam Buk taken up on the tips of the thumb and first finger. Give a gentle dose of saline medicine—as much sulphate of soda as will lie on a sixpence dissolved in two tablespoonfuls of water. Repeat after a day's interval on plain water.

Are They Finches?

Argument.—Yes; Linnets, Greenfinches (Green Linnets you wrongly term these), Siskins, and Redpolls are all members of the great Finch family—"Fringillidæ." The Greenfinch, however, unlike the rest, is not a member of the sub-family "Fringillinæ," but is, along with the Hawfinch, a member of the sub-family "Coccothraustinæ," or Grosbecks. What do you say?—if he uses the family title often no wonder he has a swollen beak? Go on.

Making Preserved Egg-Flake.

R. Dews.—I really am not sure exactly how this is produced. I read an account of it somewhere, but memory plays me false. I believe, however, the yolks are merely poured to a suitable depth on flat tins (probably greased) and placed in a moderate oven for the moisture to evaporate, when the "egg-flake" of commerce is the result.

Nightingales Breeding in Captivity.

A. Austin.—It is quite true that the Nightingale has been successfully bred in a suitably fitted outdoor aviary. I do not know of any instance of the bird having been induced to breed when confined in a cage. What are the "several instances" your friend has heard of?—were they in cage or aviary?

Sex of Goldfinches.

Novice Reader.—The surest sign of the sex of a Goldfinch is afforded by the blaze. If the blaze exteuds back to the far edge of the eye, the bird can safely be bought as a cock; the farther it extends back the safer the sign, of course. If the blaze stops short at, say, from the beginning (reckoning from the beak) to the middle of the eye, then it is likely to be a hen. A very small-blazed bird is an object for suspicion. At the same time, genuine cocks with quite tiny blazes are not at all uncommon. The hens are usually paler (more dingy) in colour all over than the cocks, and have the wing butts (shoulders) ashy or greyish in tone, instead of dense glossy black as in most males. Cock and hen are otherwise alike—one has no "marks which the other lacks."

Concerning a Blackbird.

W.H.P.—Get a bottle of glyco-thymoline (any good chemist), and every day bathe the bird's eyes, and wash out its mouth, with a warm diluted solution, made according to the directions accompanying the bottle. Do it twice, and even thrice, a day at first, if it seems necessary. You can extract the broken tail feathers, if you like, but the other plumage will not come right until after the next moult. Let him bathe, and it may improve, however. A Blackie sings practically all the year round when kept in a cage—moulting period only barred. The fresh air will not hurt him, once the cold, damp days have disappeared.

Hen Linnet to Cock Canary.

L. Matthews.—It is quite possible to successfully mate either a Yorkshire or Crested Canary with a hen Linnet. Of course, you understand that the mating of cock Linnet to hen Canary is the usual method, and the one much more likely to meet with success. I cannot recommend any particular dealer; it is against our rules to do so. If you have yet to buy your hen Linnet, I am afraid your chances of success are not bright, unless you can lay hands on a house moulted one in good condition, or a steady young hen caught last back-end. I should prefer a not too lengthy Yorkshire for her mate.

A Question of Condition.

Muler.—It seems evident your Goldfinch is not yet in breeding condition. Many, owing to the peculiar weather, are very backward this year. Your hen, however, can hardly be in breeding condition either, or she would have shown signs of building. As I am continually telling readers, it is no use mating up birds which are not in breeding form; they won't do any good. Separate this couple, leaving them where they can see each other—if possible where the cock can feed the hen through the wires. There is no reason whatever why the two birds should not eventually breed, but you will probably have to wait until the sunny weather comes to stay ere you do any good. Let the Goldie have a liberal allowance of niger and maw seeds daily, also dandelion, both young leaves, and seeding and flowering heads, and flowering groundsel tops. The hen might be helped on by a teaspoonful of egg and biscuit daily, into which has been well mixed 4 or 5 spots of Parrish's Chemical Food. When she commences to carry nesting stuff about in her beak, then run the Goldfinch along with her again.

Mating a Linnet.

G.B.A.—Although I said you were probably too early for the Linnets, it must be left for you to say whether this is really so or not. I could not tell for certain myself unless I saw them. If they are in full song (that is, singing vigorously during greater part of the day), and have beaks which look a deep blue-black in colour, then you can safely leave them with any hen Canary, and reasonably expect to get fertile eggs. Cock Linnets are usually quite easily mated with hen Canaries, and when in high condition feed and pay them other attentions with a freedom and ardour that leave no room for doubt in the mind of the owner. As your other query concerns a matter of Roller Canary breeding, you must look in the Roller Canary column for a reply to it. Questions about different birds (note rules) should be written on separate pieces of paper.

Handrearing Blackbirds: Dead Goldfinch.

E. A. Kay.—You should have sent the body of your dead Goldfinch to our Mr. North for post mortem examination; it does not come within my province to determine the causes of deaths. It reads like an attack of some internal inflammation, for treatment of which consult the chapter on diseases in the "Annual." There is nothing wrong with the seed sample sent, so far as my eyes and microscope tell me. It was only the week before last that I told how to hand-rear Blackbirds. What a pity readers will not have the kindness to look back a number or two, and so save me much valuable time! Note another reply this week. If the youngsters are constipated, mix 2 spots of tasteless castor oil with a little of the soft food, and feed this to them, repeating the dose if it seems necessary, after a suitable interval. It is against our rules to recommend any particular advertisers; if you use the deposit system you can hardly go wrong.

Goldfinch Mule "Picking" Himself.

Pieker.—If you are quite sure red mite do not infest your bird, then it is not easy to say what is the reason—some skin irritation, possibly. Get a bottle of Scrubb's Cloudy Ammonia, and put sufficient of this in water to turn it just cloudy in colour, then well spray the bird with it every day. See that he does not catch cold while getting dry. If he has picked himself anywhere until raw and bleeding, touch the spots with Friar's Balsam; if the places simply look red and irritable, use hazeline cream instead. Feed him very plainly, using canary, teazle, and maw seeds chiefly, along with soaked rape, avoiding for the time being hemp, linseed, niger, and oily seeds. Let him have a feed of dandelion daily. Ten drops of fresh lemon juice, well stirred into its drinking water every day might help the Mule to recover.

Breeding Bullfinches in Cages.

F.J.J.—It is a difficult matter to induce Bullfinches to breed when confined in a cage. Still, it it on record as having been achieved. In a suitably fitted outdoor aviary Bullfinches have nested and reared their young on a fair number of occasions. It is not difficult to get the hen Bullie to prepare a nest and lay eggs when in a cage, the real difficulty being to get the eggs fertilised and the young birds reared. The breeding of Bullfinches in a cage will, of course, afford any one a pleasant field for experimentation, but, coming down to the practical side of the question, I must say that one gains nothing whatever by it. Caught Bullfinches are usually so easy to get steady, that if the proeuring of tame specimens be the sole object, then there is no necessity to start in and try to breed them. Further, delightfully tame hand-reared Bullfinches can be bought for 4/- or 5/- each, during the latter part of the year, when they come over in hundreds from the Continent—"broken pipers," or the failures among the nestlings which have been under tuition. If you decide to try to breed, let your couple have an old Thrush or Blackbird nest, which most hen Bullies are very fond of, and will re-line and lay in. There are plenty of good ones to be had now from out the hedgerows, which have just seen the backs of the "first round" of young Blackies or Throstles.

A Batch of Brevities.

Will Mules Breed? (One in Doubt).—Believe me, I have answered this question scores of times—quite recently, too. It has never yet been proved that Mules have produced young, either when their mate has been some pure species or another Mule. Pleased to hear result, of course. Goldfinches in aviaries are not meddlesome like they are in cages.

Eggs Laid on Floor (H.D.).—Put the nest box on the floor of the cage. If this does not induce the hen to lay her eggs in the proper receptacle, you can only put the perches low down and cover the cage bottom with a thick layer of sawdust, which will break the fall, and so prevent the precious objects from cracking.

Anxious.—I do not think you are feeding your birds too well, in fact I should give them a small teaspoonful of egg food each every day, with which 3 or 4 spots of Chemical Food have been well mixed. When the sunny, really warm weather comes along you will doubtless find the birds ready enough to breed. Gather and give them all a feed of dandelion daily, young leaves and flowering and seedy heads. As regards the society, we could not mention any one in particular. If you get CAGE BIRDS ANNUAL, however, you will find all the London clubs therein, with headquarters and secretary's address.

Weed.—The yellow head you enclose is not that of the dandelion, but of a similar looking, though smaller, flower, useless however to give to birds. The true dandelion is easily recognised; all the leaves spring direct from the ground, as it were, and do not grow from a central stalk. Sample of shepherd's purse I have posted on to you.

Pied Blackbird (J. Saunders).—If this bird's plumage is a mixture of dense black and white, and the bill and eye ceres are distinctly yellow, it is a certain cock. I should keep it, and moult it. From your description the Blackie would seem to be very nicely marked indeed, and you might get a sovereign to thirty shillings for him later on, if in good condition.

Anxious.—I was denied the pleasure (?) of tickling my olfactory nerves with the perfume from your dead Linnet, owing to an unfortunate absence from London. Hemp would not kill it, given in the moderate quantity you mention; neither would sea-sand, unless heavily charged with sewage or other impurity. Whether it was a "show specimen" or not I cannot, of course, say.

C. Melhuish.—Thrushes have been bred in an aviary, and if you possess such a place it would certainly be worth while trying the experiment. If not, I should let her have her liberty. You can safely let her go into the fields, providing her wing flights are in good order. Many hen British birds lay eggs in captivity when kept in tip-top condition; it is not at all a rare occurrence.

E. Lord.—I should not for a moment contemplate putting Oxeye (Great) Tits into an aviary containing small Foreign birds. You'll run up against a disaster if you do, sooner or later. Blue Tits might be trusted; but even these would carry an element of danger, for well-authenticated instances of them slaughtering fellow inmates of aviaries are on record. I never personally, however, had serious trouble with Blue Tits, though they are apt to "bustle about" other birds.

Bad Legs (G. T. Ainsworth).—I expect your Thrush is troubled with what fanciers term "scaly legs" or "leggings," and you should treat him as advised another inquirer on the same point this week. It is a trouble which attacks most birds that have been a long time in confinement.

Thrush Recovering (Tatters).—I should stop the bread and milk gradually, and gradually get him on to a proper Thrush stock food, made as directed in another reply this week. It could hardly be expected to sing yet; but the song is the only certain means of telling whether it is a

cock or a hen, for both sexes are alike in plumage. Bathe the feet in nicely warm water, and afterwards anoint them with a little stimulating ointment—say Zam Buk. The plumage may not come right until after the next moult.

Lark Recovering (South Wales).—Quite a gratifying number of "recoveries" this week! You probably expect too much in regard to the singing; give the bird a little more time. Do you know for certain that it is a cock, however? If he is now plump, I should drop the cod liver oil, and mix into the soft food instead six or seven drops of chemical food every day. Commence with two or three drops only, and gradually work the number up.

A Change of Husbands (A.H.).—You have done nothing wrong in changing the cock Goldfinch for the cock Canary. It was quite the correct thing to remove the former from the room entirely. Feed him well, and give him another chance at, say, the beginning of June. All Goldfinches, of course, will not breed when confined in a cage. You may unfortunately have one of this brand.

Bullie Laying Well (E.H.B.).—As the cock Canary was with the hen Bullie seven clear days before she commenced laying the clutch, there was full time for all to be fertilised. I trust your hopes may be realised. Many hen Bullies lay freely, and many, alas, lay unfertile eggs. There is always hope of fertility, however, when a hen builds, lays, and sits in such methodical fashion as yours has done. She may even turn out a good mother, and, in any case, the cock Canary is quite likely to take on the feeding duties.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S., M.B.N.H.S.

What Bird?

My son has brought from Pernambuco a Parrot with black beak and legs, green body, yellow face, bright blue at top of head, and red tips on shoulders. What kind of Parrot is it? It is mopy and dull, but very tame, also thirsty, but I have not given any water. Is the dietary herewith correct.—J. ROBERTS.

J. Roberts.—It is a Blue-fronted Amazon, a handsome and entertaining species, and if properly treated hardy and enduring. It is also, as a rule, both a good talker and mimic. Your diet is altogether wrong. It is a cruelty to deprive a Parrot of water, but as you have withheld it so long, give it with caution at first, only letting it have a few sips at a time at intervals. Never give tea, coffee, or milk slops, table scraps, or animal food of any kind. Diet:—A seed mixture of canary, oats, small Indian corn, hemp, dari, and sunflower seed, in equal parts. Let this be your staple diet. Also give regular supplies of grit, cuttlefish, and green food. Give, not altogether, but so as to vary the diet:—Ripe fruit, plain biscuit, nuts, boiled potato, raw carrot, and a crust of household bread dry. A little boiled maize twice a week is beneficial to this species (it only keeps fresh one day). Put half a teaspoonful of Dinneford's Magnesia in two tablespoonfuls of water, and let it have only this to drink for one day. Follow this by well colouring the drinking water with Parrish's Chemical Food. So treated it should soon improve, but on your present diet it will not thrive.

Treatment of Madagasar Love Birds.

(1) Do they breed? (2) What size and kind of cage do they want? (3) What nesting material? (4) What food?—EAGER.

Eager.—(1) Yes, but they are not such frequent breeders as Budgerigars, and I fear their doing so in a cage very doubtful. (2) The cage to induce them to breed in must be large, say at least 3 ft. by 1½ ft. by 1½ ft. high, with a husk hung up in one corner, and a closed box, with hole in front at the other, also plenty of branches for them to climb about and perch on. (3) Either stick (branches), from which they can pare the bark, or you must supply them with thin bark, recently stripped from almost any kind of wood. They will carry this to their nest, and snugly line it with same. (4) Canary, white and spray millet seeds, a few oats, cuttlefish, green food, grit, and water ad lib. When they have young to feed give them a dry crust of household bread. These birds are rather wild at first, so be as unobtrusive as possible in your movements, etc., while attending to them. Note.—All birds, even the most hardy, must be kept out of draught.

Outdoor Aviary and it's Inhabitants.

In my aviary, 10 by 6 by 9 ft., I have pairs of the following Zebra and Cinnamon Finches, Cutthroats, Javas, Avadavats, Spice Birds, Linnet and Canary, Goldfinch and Canary. (1) How many of them may be termed breeders, and what nests do they require? (2) How many more could I put in, and what kind—seed eaters only? (3) How soon can I put out a pair of Canaries that have been kept in cold room? (4) Are Spice Birds and Cinnamon Finches one and the same? (5) Can you name my two Weavers from description given, also are they males?—NOVICE.

Novice.—(1) All the birds you name, except the Avadavat, may be accounted as probable breeders. The Avadavat seldom nests in captivity; in such instances as this has occurred it has been in large outdoor aviaries. Their ease is certainly not hopeless; some have succeeded, why not you? Put up cocoanut husks and shells, also boxes of several types, and supply long grass, hay and moss for nesting material. If the back of your aviary is lined, as it should be, with twiggy branches, some of the birds will build there. (2) You could put in two or three more pairs, but you must not overcrowd; the less in number the greater prospect of successful breeding. Put in pairs of Rufous-tailed Finches, Silverbills, and Diamond Doves, the last-named are beautiful little creatures and almost sure breeders. You must give a little soft food when seed-eaters have young, the same as you do with Canaries. (3) By the time you see this reply it should be safe to put them out, unless the weather turns very unseasonable. (4) Dealers' and trivial names are very unreliable, and, while in this case they apply to the same bird, they are often used in an irregular and misleading manner. (5) Your Weavers appear to be Black-faced Weavers, but from the meagre description it is not possible to determine their sex or exact species. However, if they are males, they will very soon be transformed into quite brilliant birds to what they are now.

Outdoor Aviary.

I herewith send particulars of my aviary. Will you please suggest any necessary alterations, and instruct me how to fit it up?—FRESH AIR.

Fresh Air.—Your aviary is well arranged, save that one side must be bourded up weather proof, to form the back, and the aviary should be so placed that the front faces as near south as possible. The roof should overhang twelve inches at the front as a screen from driving rain. The back of aviary, which should be felted outside the boards, should be lined on the inside with twiggy branches (I find peasticks very handy), and also same should be fixed horizontally under ridge, well up against the roof. Fix a number of nest boxes, husks, shells, and rush baskets behind the twigs, in fact, put up as many as you can so that they are at least twelve inches apart; the husks you should hang from roof. Have several seed hoppers in various parts of the aviary, and see that any food or water vessels are not directly beneath branches or perches. You will have space for half a dozen pairs for breeding, with perhaps a few pairs of Waxbills, which I do not suppose will attempt to nest, but they will not interfere with the others if plenty of nest boxes, etc., are provided. They are beautiful little things, no trouble once they are acclimatised, and add life and go to the aviary. You would find the Common Avadavat, Golden-breasted and Orange-cheek Waxbills as good and beautiful as any for this purpose.

Ring-necked Parrakeets.

Please give me a few hints as to the general treatment of these birds. I am hoping to breed them. Do you think they are genuine Ring-necks from the particulars given?—A.T.C.

A.T.C.—The advice given in our reply to J. H. Woodward re Moustache Parrakeets will equally apply to Ring-necks. Providing both birds are adult you have a true pair of Ring-necked Parrakeets. Yes, they will have long tails, which will appear in due course. You do not give your diet, but this is evidently all right as the birds have improved in condition; keep up a good supply of cuttlefish, and just colour their drinking water with Parrish's Chemical Food till they are in full plumage again. Give ripe fruit as in season, and when they have young to feed they will appreciate a liberal supply of oats, green food, and dry crusts of household bread. A good-sized bath should be kept in their aviary, so that they may bathe according to their fancy. Several fairly thick branches set in the ground will be useful for them to climb about on, and also supply them with material on which to exercise their beaks, and so save the woodwork of your aviary.

What Parrot, etc.?

(1) It has a grey back, pink breast, white crown, and short tail; what kind is it? (2) Will it talk, and must it be taught?—NO NAME.

No Name.—(1) It is the Australian Red-breasted Cockatoo (*Cacatua roseicapilla*), a hardy and long-lived species, once over the effects of importation. (2) Some individuals talk fairly well, but the majority do not do much in this direction; though most speak a few words fairly plain. In spite of this they are droll, companionable birds, readily learn tricks, and are good acrobats. As regards training, keep them where they will hear plenty of conversation, and also try constant repetition of words and short phrases. (3) A mixture of canary, oats, wheat, dari, hemp, small Indian corn, and sunflower seed. Well mix, and always keep a supply in the cage, also the same as to grit, cuttlefish, and water. Give as extras, and to vary its diet, ripe fruit, nuts, plain biscuits, green food, boiled potato (dry), and raw carrot. Do not give table scraps, sops, fats, or any kind of animal food whatever. The temperature of any ordinary living room will be ample for it, but it must not be exposed to draught.

Breeding Foreign Finches.

In my outdoor aviary I have Saffron Finches, Grey Java Sparrows, Black-headed Nuns, and male Bullfinch and Goldfinch, and four hen Canaries. What kind of nest boxes and materials do the Foreigners require? What food when they have young?—BEGINNER.

Beginner.—It is much the best plan to put up a number of nest boxes, in your case say a dozen at least. Cocoa-nut husks are favourite receptacles for many kinds of Finches, have those specially wired for Finches (see advertisement columns). Hartz Canary travelling cages are also used by many species; remove the fittings and cut out a couple of the bars, and they simply require hanging up. Put up a few of the earthenware bracket Canary nest pans, and also some square boxes; have a round hole, 1½ in. cut out in the front for entrance. Hay and long grass is about all they require for nest material, but if you have a dead bush about, they will appreciate the fibrous rootlets of same. For the birds you name canary, white, brown and spray millet, green food, cuttlefish, grit, and water ad lib. should be the regulation diet. Any insects such as beetles, spiders, earwigs, green fly, etc., as you can capture will be a welcome and wholesome addition to their bill of fare. When they have young to feed, supply a little of some good soft food mixture (see advertisements); if you wish to mix your own, see reply to another correspondent in this issue. You would find a pair of Zebra Finches (3/6) freer breeders than those you have at present, and you have ample room for them.

Breeding Budgerigars.

I have three pairs in outdoor aviary, but all are moulting badly. They seem to be in breeding condition, as they are feeding each other the whole of the time. What treatment must I give to get them to breed?—PERPLEXED.

Perplexed.—These birds will undoubtedly settle down to breeding as soon as they are in feather again. You must have at least six husks put up for them to prevent quarreling; they require no nesting material. Let them have an unlimited supply of cuttlefish and green food, tufts of grass in flower are plentiful now, and they cannot have too much of it, providing it is not sodden with wet. The floor of aviary should be well covered with good gritty sand and bird grit, and crushed egg shells from your table scattered over same. All else that will be required is canary and millet seed, spray millet as often as you choose to give it, a few oats twice a week. When they are feeding young supply oats daily, and give a dry crust of stale household bread. Just colouring their drinking water (use a crock or glass drinking vessel) with Parrish's Chemical Food will help them through the moult.

Cockateels Dying Egg-bound.

I have just lost two hens from this complaint, which had been in my possession for a year, and were in splendid condition. What treatment can I give to remedy this?—J. JOHNSON.

J. Johnson.—The changeable temperature of the greenhouse has had much to do with your trouble, but if you have thorough ventilation without draught, the situation should not be an impossible one. I presume you have top of their cage or enclosure covered in and not open to the glass; if not, you should rectify this at once. I do not think the size of the egg had anything to do with it, but that through, possibly, insufficient exercise the bird was too fat to pass the egg. Diet: Canary and millet in equal parts, and a few oats twice a week; liberal supplies of cuttlefish, green food, such as lettuce, tufts of grass, etc. When they have young to feed give oats daily, also a dry crust of housebold bread; crush the egg shells left from your table, and scatter same on floor of aviary or cage, also supply, if obtainable, crushed mortar rubbish; by so treating I have never had a case of egg binding with these birds. No, they do not require bread and milk. When you noticed the birds droop, the application of a few drops of olive oil direct to the bird's mouth, and a little to the vent, and steaming the vent afterwards over a jug of hot water for a few minutes would possibly have saved the birds' lives. It is well to give a little brandy and water immediately after such treatment.

What Bird?

(1) It is a large bird, green body, red beak, long blue tail, rose and black ring round neck. What kind of bird is it, and what country does it come from? (2) How can I teach it to talk? (3) How can I tell male and female? (4) How must I feed him?—E. H. V.

E. H. V.—(1) It is the Indian Ring-necked Parrakeet (*Palæornis torquata*), and a male. (2) First you must get it thoroughly tame and accustomed to yourself; keep it where it will hear plenty of conversation, and also by constant repetition, not several things at once, but a short phrase or word at a time till it is learned, then take up another. (3) The female has no ring round the neck when adult; young immature males resemble the adult female. (4) The staple diet is a seed mixture of maize, wheat, dari, oats, and canary in equal parts, and half a part of hemp seed; plain biscuit, nuts, ripe fruit, grit, cuttlefish, green food, such as lettuce, green peas, grass, etc., boiled potato, raw carrot, and water ad lib. Do not on any account give tea, coffee, or milk sops, table scraps, or any kind of animal food. This is a hardy species once it has got over the hardships of the voyage to this country, but it must be protected from draught.

Grey Parrot Moping.

I have carried out your instructions, but the bird will not eat the seed mixture and fruit. He eats biscuit, potato, and Indian corn. His condition appears about the same, but I notice a small white lump on the side of his tongue, rather far back, and for the last two days does not appear able to crack his corn. How must I treat for this?—W. H.

W.H.—You must continue the treatment advised in our previous reply, with the following modifications:—Cease the Chemical Food for about a fortnight, and in place of same mix daily 12 grains chlorate of potassium with each ounce of the bird's drinking water; also mix 20 grains of chlorate of potassium with 2 drachms of honey, and wipe out the bird's mouth with this three or four times daily, using a feather or camel hair brush for the purpose; you must use a fresh portion of the mixture each time. Keep the bird warm and out of draught. Still tempt him with a little fruit, and keep a tin of the proper seed mixture in its cage; it should ultimately take to same. It will take no hurt, and should do well on the food it is taking. Boil the Indian corn for it while its mouth is sore (it only keeps fresh one day). I have given you treatment for an ulcerated mouth, as that is what appears to be the trouble; at the same time, where single growths appear it is always better to let a vet. see it (I advise this in your case). If it is anything needing removal, a vet. should be able to give almost immediate relief. It is not possible to diagnose such cases as the present with certainty by correspondence.

Ribbon Finches not Sitting.

My birds laid four eggs on April 8th, but broke them, and on the 26th she commenced laying again, and has now 12 eggs, but does not sit regularly. How can I get them to batch out and rear the young?—A.L.O.B.

A.L.O.B.—It appears to me you have two hens, as I never knew these birds to lay more than six eggs to the clutch, it is usually only four or five. You can easily decide the sexes of your birds; the male has a bright red band or collar round the front of the neck, extending to the far side of the ear coverts; the female is a plain brown bird having no collar. The male certainly relieves the female at times, and carefully guards and feeds her on the nest, leaving the duty of incubation very largely to the female. Diet: Canary, white and spray millet, ants' eggs (cocoons), and when they have young to feed, a mixture of crushed Osborne biscuit, ants' eggs, and dried flies in equal parts, made crumbly moist for use. You must also supply regularly cuttlefish, grit, green food, and water "ad lib." It appears to me that, if you have a true pair, the high temperature of your room (this is a very hardy species) and the egg food have over-stimulated the birds; consequently, as soon as they have laid a clutch, they start building again just as yours have done. However, I strongly suspect you have two hens.

Grey Parrot with Damaged Beak.

I bought this bird in wretched plumage, but by following advice given in "C.B." its plumage is now in lovely condition. But its beak appears to be rotting, and keeps breaking away; it does not appear to hurt him, for he frequently knocks it against cage wires. It is otherwise healthy, is very lively, and talks nearly all day. How shall I treat?—A. BENNETT.

A. Bennett.—I do not think there is any actual disease which is causing the beak to wear away, but am of the opinion it is being broken away by knocking and biting at the cage wire. I suggest keeping a piece of cuttlefish in the cage, and also a thickish branch of some non-splintering wood; it should take to amusing itself by chewing these up and leaving the wires of cage alone. Cotton reels are also useful, given for the same purpose. However, as it is such an entertaining bird, it would be worth your while to let a vet. see it, if there is no improvement shortly. The beak cannot be soft, or the bird could not eat its mixture, and you say it is in good health, lively, and talking well, so that I am at a loss to actually diagnose the trouble. It will be safest to let a vet. see it, and if there is any actual disease he will be in a position to provide a remedy, which at present I cannot do from your details. I have a rare Hawk-headed Calque that frequently chips his beak by imitating the postman's knock with his beak against the wires of his cage, but, still, not to any serious extent.

Port Lincoln Parrakeets.

What is their size and colouring? Do they make nice cage pets? What sort of voices have they? Are they quiet birds for Parrakeets?—F.C.D.

F.C.D.—This most handsome Parrakeet is very hardy, and is arrayed in bright green, yellow band at back of neck, whole of the head blackish-brown, with a narrow frontal band of red, the flights and outer tail feathers blue. They are not timid birds and are readily tamed, soon learn to know and show affection to those who supply their needs. Their call is rather melodious than otherwise, and not unduly loud. It is not a species given to much talking, but individuals that have spoken a few words, and also whistled tunes, have been heard of. They are about the size of Rosellas, and are not noisy for Parrakeets. Diet: Principally canary and millet seed, but oats, sunflower, hemp, dari, and maize may also be given; green food, cuttlefish, grit, and water "ad lib." A little ripe fruit, apple, pear, banana, etc., as in season, is wholesome, and should be regularly offered. A piece of some non-splintering wood, say, about 2 in. diameter by 18 in. or so long, preferably with the bark, should be kept in the cage for it to exercise its beak upon.

Foreign Bird Queries continued on p. 450.

POST MORTEMS.

Mr. J. North, 435, Oxford Road, Reading, will examine cage birds for a fee of 1s. 6d. each bird; for a reply direct, 2s. 6d.; analysis, 21s. Subjects for post-mortem examination must be sent packed in a box direct to J. North, with fee. Any sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.

Canary Hen (E. and G. W.).—Death was caused by peritonitis, or inflammation of the lining of the abdomen, probably caused by rupture of immature egg. The hen was a young one, and had disease of liver, which, one with the other, may account for her peculiarities in sitting and laying. Such cannot be avoided, but only the most healthy birds should be selected for breeding.

Canary Hen (Mrs. Debenham).—The immediate cause of death was apoplexy, but in my opinion this was the result of feverishness, set up by scrofulous condition of the lungs. I also think this is an infectious state, and possibly accounts for your other losses. If you have other birds you must run them into clean cages and disinfect the others.

Goldfinch (C. Parsons).—Chronic softening of liver, ending with rupture of blood-vessel of that organ.

Featherless Canary Hen ("Fulham").—Long established liver disease, which probably accounts for absence of plumage; lungs also affected and recently inflamed.

GENERAL.

Answered by the EDITOR.

Memo Forms (R. G. and others).—We have written you.

Gave Copy Away (Mrs. A. B.).—Many thanks for assistance.

Gone Astray (Walter D.).—Hope you will be successful in tracing the lost MSS.

Bad Luck (T.H.T.).—Sorry to hear your members are having such bad luck. May it not continue.

Address Wanted (John T. Hunter).—The names and addresses of show reporters are never given publicity to. Sorry can't oblige you.

Cutting (A. E. W.).—Many thanks for thinking of us. You will see we have made use of the cutting.

Palace Prize Money (H. Mills, J. Stanger, and others).—Many thanks for kind letters. So long as you are satisfied, we are.

"Plates are Splendid." (A. J. Luce).—Glad you liked the plates. Your bird room will certainly be made attractive by hanging them up in it.

Notes (D. C. V.).—Many thanks for kind wishes. Your notes will have our best consideration, and we are obliged to you for sending same.

Finch Wanted (J. H. Nevin).—It would be very unfair for us to recommend one advertiser to the detriment of others. You must consult our advertisement columns and chose for yourself.

Address Required (G.W.).—It is against our rules to furnish addresses, but we are pleased to forward stamped letters unaddressed. Repeat name when sending.

Persian Cats (W. Brook).—Several papers are published dealing with cats. "Our Cats," "Fur and Feather," and "The Bazaar" are all reputable organs of the cat fancy.

Specimen Copies (W. H. Love).—It is very good of you to offer to distribute specimen copies, which have been duly forwarded. Accept our grateful thanks.

Pestle and Mortar (Grover).—A pestle and mortar can be bought very cheaply at any large drug stores or ironmongers—probably at most chemists' shops.

Gateshead and the C.B.U. Rules (G. W. McP.).—Our sins be upon our own head. We are willing and anxious to allow you fair play. The point in your letter we took exception to was the reference to "the injured party," not to your defence of yourself.

Photo of Aviary (Sergeant Dowler).—Many thanks for photo, which we hope to reproduce some time when space permits, possibly in a future Special Number. We are pleased to know that the chance glance through a copy of CAGE BIRDS led to your taking up a hobby which has given you so much pleasure.

Like a Fairy Tale (G. McLeod).—Your humour, George, is just a trifle too long-winded and forced. The idea of a legless Bullfinch-Ostrich Hybrid swallowing a boa-constrictor is certainly fantastic and you are evidently of a keenly satirical disposition. Try "Funny Cuts." "Will Hybrids Breed?" is one of those perennially unanswered questions we cannot satisfy you upon.

Tar (Constant Reader).—Either coal tar, or Stockholm tar will answer the purpose. They both have great medicinal properties, and are equally efficacious in diseases of the respiratory organs. One poultry fancier whom we know swears by tar and glycerine in chest affections, using the tar in the proportion of one to twenty of glycerine, and then giving 15 drops of the mixture to each ounce of the water.

Competition (Jenkin L. Thomas).—To adopt an historic phrase, now almost forgotten, "Where are your eyes?" You cannot enter Doves in a Canary-breeding competition. That appears to be your intention; if it isn't, we "ajolopise." We know of no connubial process, at any rate, which will propagate little Canaries out of Doves. You may have solved the problem, and, if so, go ahead. Neither are we vendors of cages. Plenty of cage makers, reliable and trustworthy men, advertise in our columns, and to them we respectfully refer you.

Starting a Society at Long Eaton (H. Hay).—We have inserted a short paragraph calling attention to your desire to form a society, which we hope will lead to local fanciers responding to your invitation. You should ask your local newspaper to insert a similar notice, and if you are connected with any local club you might get notices put up in the club house, in your barber's shop, and in the restaurants and hotels. Having secured a number of names, you could call a meeting at some suitable place to discuss matters, enrol members, and start the society. If you were to write to one or more prominent fanciers in Derby or Nottingham it is quite possible they would come over to the meeting, give you some good advice, help you to float the society, and assist you in the formation of rules.

IS IT A QUAIL?

SIR,—In answer to your correspondent, Edward Jenner, the bird he has caught is undoubtedly a cock common Quail, such as are often offered for killing purposes by the high-class fishmongers and poulterers. It would be interesting to me to know where he caught it, as I released two cock Quails on April 18th, in a field near my house, Newport, Monmouthshire, as I had too many cocks. I find them very interesting in an aviary, breeding with me very freely; but they are terrible fighters, the cocks killing each other. Edward Jenner is feeding correctly, except that they are fond of some kind of insect food, worms being relished.

VINCENT BUTLER.

CAGE BIRD SOCIETY FOR BURTON.

SIR,—There has been a considerable amount of talk amongst the cage bird fanciers in this town as to the advisability of forming a cage bird society, but I am sorry to say it has not got beyond talk. If we are to have a society (and a show) devoted to cage birds alone, now is the time to commence and arrange details, etc. Surely there are one or two among the large number of breeders in Burton-on-Trent who would take the matter in hand and call a meeting. Once started, I feel sure it would go, as there are now a larger number of cage bird fanciers here than ever. I trust this will meet the eye of some of them who will give their views on the matter. Why cannot we have a good cage bird society in the town, and arrange for lectures, washing exhibitions, table shows, etc., etc., the same as is done in many other places? "JUMBO."

HEN BULLFINCH LAYS FREELY.

SIR,—I am writing of the experience I have had with a hen Bullfinch, thinking that it will interest some of your readers. It is one that I caught in 1905, and it laid 14 eggs in 1906; but they were all clear. I had a Redpoll in with her. I have put a Norwich Canary up with her this time. I had the Canary running with her for about two months, and then I took it out, and she laid one egg on April 29th. So I put the Canary straight back again, and she laid again on May 6th and the next four following days, missing Saturday, and laying again on Sunday—that is, six eggs in one week. I think this is something out of the common, as I only have her in a cage. I have put five of her eggs under a Canary, and given her three of the Canary's eggs and one of her own. She is sitting at the present very close, and the cock sits over her all day. I only hope that I will have a bit better luck this time. I conclude by wishing your paper every success.

G. H. BOWERBANK.

THE NORWICH PLAINHEAD.

SIR,—Two or three mistakes were made by the comp. in setting up my lecture, and I shall esteem it a favour if you will kindly have them corrected. In the first place, the comma introduced after the word "however" in the second sentence of the second paragraph spoils the sense. The third sentence of the second paragraph should begin thus: "The stock birds have been," etc. Then the latter part of a sentence at the bottom of col. 3 should read: "Veterans that are required to do battle again for the honour of the house." A period should have been used after the word "year" in the peroration, and the beginning of the last sentence should have read: "And if any among us should find, when 'the time of the singing of birds' has once more slipped into the dead past, that we have little," etc., etc. J. A. ECKERSLEY.

RESIGNATIONS AT BARROW.

Some Reasons and a Disclaimer.

SIR,—I noticed in your valuable paper a fortnight since a paragraph wherein was mentioned the names of the Barrow and District C.B.A. officers who had resigned their positions. This (the sending of my name) was done without my consent, or any knowledge of the same being done. My reason for resigning I made known at the time, telling the members that having got a better position at work I could not devote my time to the secretarial duties of the Association. Since resigning office, I have resigned membership, the reasons being:—(1) Having been accused of working detrimental to the Association, by being connected with the late Treasurer and President in running our December Open Show to a financial failure. Still, the members voted in favour of the balance-sheet being accepted as correct as from the auditors, gentlemen whom I do not remember ever meeting personally. (2) After electing a local gentleman to judge this year's Nest Feather Show at one meeting, the following meeting they rescinded the minute, and a member goes for an outside judge and offers to pay the judge's fee himself, until he gets excited a bit once, then he declares that he is not doing it himself, but that five or six are subscribing, showing that the business of the club is done outside and not in a proper manner. Now I think I have taken up enough of your valuable space, but will remain a true fancier in the person of E. E. MILLER.

THE WICKEDNESS OF COLOUR FEEDING.

SIR,—It was my humble opinion that the Fancy consisted of men who bred birds as a pleasurable hobby or pastime, and as an inseparable consequence spent a goodly portion of their spare time in the bird room, or some special corner where their hobby was carried on, with egg drawers, seed hoppers, cage scrapers—implements analogous to the spade, fork, etc., of the gardener—in their hands, and that the best of the season's produce sometimes found its way to exhibitions for the gratification of the sight-seeing public, the hulk of whom, far from being fanciers, would probably not be able to tell a Canary from a Yellow-hammer, or a "colour fed nose" from a pickled beetroot. But, perhaps I was wrong, and after all birds may be spontaneously generated, and every visitor to a bird show a fancier, just as, perhaps, every visitor to a flower and vegetable show must be a gardener. Although your printer so faithfully carried out Mr. The Pink and Green-striped Elephant's instructions to print "simile," I could not resist the "smile" when I read of the gardener's disregard for the blue bag, red ochre, etc. Of course, he does not want such things as these. But is he ever seen with a bag of guano, nitrate of soda, superphosphate of lime, etc., etc., and does he never employ them to improve, or to "feed" the colour of his flowers and vegetables in a manner precisely analogous to the dark deeds of bird fanciers when they "feed" or improve the latent colour of their birds. Yes, Mr. Printer, make it "smile" this time. We are getting on, surely.

CLAUDE ST. JOHN.

THE CRESTED CANARY CLUB AND THE C.B.U.

SIR,—The importance of the letter signed "A Country Member," which appeared on the 27th ult., may be estimated by the fact that it has up to the present remained unanswered. I have several reasons for delaying its passing into oblivion, the first, and not the least, being the more than ordinary knowledge possessed by the writer of what transpires at the Councils of the C.B.U. I regret that he has screened his identity with the cloak of anonymity. If his motives and intuitions are sincere, surely he has no need to fear even strained relations ensuing. The club, as a body, are, I feel, quite open to conviction and conversion in the event of sound and open argument being advanced. That "A Country Member's" arguments are somewhat unreasonable renders it all the more desirable that his identity should be disclosed and his conversion effected. He states that he has known Mr. W. E. Greeves for many years, and justly credits that gentleman with being a man of "sound, reasonable judgment." And so say all of us (old song). But worse follows. The good "Country Member" proceeds to state that when Mr. Greeves' views on the C.C.C. and C.B.U. are subject to examination in a calm and reasonable frame of mind, the opinions of Mr. Greeves at once become "entirely perverted and wrong-headed." The confusion of thought on the part of "A Country Member" should entitle him to high office in that bewildering body known as the C.B.U. Might I ask if this is so? I am prompted to ask this question, having regard to what is reported to have transpired at a recent meeting of the Council of the C.B.U., at which it was decided by the (doubtless unconscious) humourists there assembled to justify a judge for disqualifying, and exonerating the exhibitors. It may be coincidence, but the parallel would suggest that "A Country Member" was strongly in evidence at the meeting, which bids fair to become historic, providing ridicule does not kill it. "A Country Member" asks that the C.B.U. be given a chance to settle down. By all means. Let some fancier compose a sleeping draught, and another its epitaph. "Country Member" argues that, "if fair cause for dissatisfaction arises, we shall soon see societies and districts resigning membership from it." It would be idle to deny there is a great deal of dissatisfaction existing, and I am inclined to believe that many resignations will very soon take effect. The wicked fanciers who say "things" about the C.B.U. are, according to "A Country Member," "like unto an hysterical woman." This is very sad, coming from such an example of calm reflection as he infers himself to be. It dawns on him at this stage that he is straying from the point. It is a sign of grace on his part, but I wish it had come earlier. I repeat the request he makes—viz., That every member of the C.C.C. will thresh out for himself (I have reason to think they have already done so.—J. T.) these two questions:—First, what will the C.C.C. lose by affiliation? Secondly, what benefits may it not at some period in the near future hope to gain by reason of being affiliated? And I would particularly ask the members also to note that, whatever they may lose, "Country Member" is evidently of the opinion that, whatever the near future may bring, at the present moment there is absolutely nothing to be gained by affiliation. JOHN TYSON.

KEYSTONE OF THE C.B.U.

SIR,—I would ask Mr. D. A. Ogilvie to disprove my assertion before he says he believes there's not a man on the job gets his expenses paid, and my statement is a slur on the No. 1 committee. What I have stated is perfectly correct, so where does the slur come in? Facts are hard things, and I trust that you did not think that I wished to draw down the thunder of the committee out of pure cussedness. What I quoted in my letter I had from the Secretary of the society in question, and I formed the opinion myself from that society's last year's show that they could ill afford any extra expense. I consider they have a right to know the business transacted at the committee meetings, instead of being told that it is private and does not affect them. I have yet to learn that such is the case, for whatever business is dealt with by the district committee is bound to affect the district in a more or less general way. There is nothing in the C.B.U. rules for the guidance of societies whether the delegates should be paid expenses or not; but, like Mr. Ogilvie, I was surprised to know that such were being paid, especially seeing that the return railway fare was under 1s. I do not know what other expenses are chargeable, as I did not ascertain the exact amount paid. As I am not a member of the society in question, I will leave it to the Secretary of same to hear me out. If anyone should know what has been done, he should; and I trust he will take up his case with the district council delegate. I thank Mr. Stephenson for his straightforward letter, and trust he will learn the result. T. TAYLOR.

GATESHEAD AND THE C.B.U.

SIR,—What evil spirit prompted me to ask for CAGE BIRDS before I had finished my dinner on the Friday night I do not know, but I got such a dose of Taylor's correspondence that my digestive organs were fairly paralysed, waking me in the dead of the night, and while I lay tormented with racking pains I mentally wrote enough to fill the present issue of CAGE BIRDS. There may be a difficulty in defining what is personal, but I think Mr. Taylor will find his criticism of my first letter in March 16th, which I allowed to pass, being a personal reference as full of insinuation to a sensitive mind as would warrant a great deal more than I have written. His second was of the same nature, and his third—Great Scott! How he growls, and how his claws do tear! Poor Mac! There is little of him left. My objection to Gateshead's action was in reference to distribution of rules, not to its attitude concerning Rule 17, which Mr. Taylor well knows, seeing my letter the week following the Press report of the annual general meeting, in which there was no other reference to the C.B.U. than the decision not to send out its rules to members; but as he has been completely confounded on that point he tries to justify his whole attitude by making Rule 17 appear the subject of our difference. Had I wished to make a personal matter of it I should have done so by mentioning names. What has followed is the result of Mr. Taylor's own action. This is what has annoyed him. The reason I quoted Mr. Taylor's positive statement was the assurance of long servitude to the Gateshead Society which it conveyed that can only cease with its dissolution, as I am sure the members will wish to keep him. Had I left out the remunerative portion of his statement I might have been accused of another "knavish practice"—trying to hide his unselfish sacrifice of time and labour. To show how he casts about for something to discredit me with in the eyes of the Fancy, and detract, if possible, from what I have written, he first says, in the issue of March 16th, that I am not a member of Gateshead, and then in his last letter he would make me out to be one—unpaid. Since he has introduced my past relations with Gateshead, let me explain. The first year I was a member I attended every monthly meeting, and I was so much discouraged at the small attendance and general want of interest displayed that I at last decided to make a better use of the little leisure time I had to spare, as a whole night was lost in going to meet a mere handful of fanciers out of a membership of over 70. On one occasion a friend and myself had our four miles' walk to meet only—the Secretary, who was not Mr. Taylor. Previous to the annual meeting of 1905 I sent in my resignation, and a suggestion for another member to fill my place on the committee, and who was elected. The Secretary would not hear of my desire, and as soon as I became aware that my subscription for the year had been paid by a gentleman—who, I do not know—I handed the amount to the Secretary with the words, "That is neither yours nor mine." Whether I was right or not I cannot tell. This was after I had tried both by word and pen to create some interest other than the holding of a show only in the Society. He might also have told you my services were very often in demand for the chair; that might have been the result of the small attendances. Since Mr. Taylor tries to hold me up to the ridicule of your readers, I pray you will allow me a fair field, and will defend myself without the aid of the family lawyer against all the trash with which he tries to encompass me, that only smothers himself, and on it I will still stand triumphantly for law and progress.

G. W. MACPARTLING.

NO RATS SEEN since using Danysz Virus six months ago; see testimonials; Single tubes, 2s. 6d.; three tubes, 5s. Post free from DANYSZ VIRUS, Ltd., Box 74, 52, Leadenhall-street, London, E.C. Harmless to other animals. No inconvenience from dead rats.

THOSE BLACK MEALWORMS.

SIR,—I scarcely see how Mr. C. P. Arthur's remarks about Europeans and Negroes applies to this question, unless he thinks I said mealworms only turned black after death. If that is so, let him read my remarks over again. I have seen mealworms black enough and apparently healthy enough at the same time. He mentions two instances, probably extreme examples, where the proportion of black mealworms is less than one in 5,000, and more than 2,500 in 5,000 respectively. Now, cannot he suggest some sensible and logical reason for this truly tremendous disparity? He begins his letter by fearing I am out of my depth in writing of this matter, and concludes it by saying he has never kept any black worms separate to see how they developed. I make no comment on this, but I will venture to suggest that he might do worse than isolate a few and watch their development, then, perhaps, he will be in a better position to say something about them. His remark about my kind of black mealworms, as he is pleased to call them, being easily produced in an overcrowded box, because "there is too much weight on the bottom ones" (these are his own words), distinctly implies that he believes the pressure of the worms on each other to be the cause of them turning black. Surely he cannot fail to see the weakness of such a theory. If the worms were packed in a solid mass in the box, there would be no more pressure on those at the bottom than anywhere else, for the simple reason that they do not stay there. The whole mass is just a moving, pulsating body, and the worms that are at the bottom one minute are just as likely or not to be on top the next minute. CLAUDE ST. JOHN.

THANKS TO A NORWICH SPECIALIST.

SIR,—In response to my letter on Cinnamon Borders, I have to thank Mr. W. Rudd, who has kindly given me three Canaries to make a start with. They are not the birds as described in my letter; two of them are from my own selection. I believe that I shall, with patience and perseverance, eventually breed Cinnamon Borders as neat and compact as the Yellows and Buffs now seen at shows. In the nineteenth century I wanted large Canaries; now I must reverse my breeding and try for the smallest. When, through ill-health, I gave up bird breeding, I was using one hard-boiled egg to six pairs; now I am beginning afresh. I intend trying some of the substitutes. Will some of your readers give their opinions concerning these advertised foods—Yolk-flake egg, Rearum, Champion Egg Food, Lifebelt, Noeggusei, Celebrated Egg Food, Eggertine, and Cod-liver Oil Cage Bird Food?

J. H. VERRALL.

[This is against our rules.—ED. "C.B."]

THE SCOTCH FANCY CANARY.

A Model Plate.

SIR,—In CAGE BIRDS for May 11th a letter appears by "Fancier," where he says the model by the famous judge, Mr. R. Wright, Greenock, is still the most popular, and that those who objected to it have gone out of the Fancy. He also states the opposition was very faint, and has vanished. Will "Fancier" explain what he means by the opposition being faint, and that they are now out of the Fancy? Who were the objectors out of the seven members of committee who fixed the model, "and who are out of the Fancy"? I understand that another famous breeder, Mr. Harrison, also submitted a model, which was termed a good second if it did not gain first position in the eyes of the seven. This model was very highly spoken of by fanciers, east and west, as being of the proper type. I understand it was pretty well known beforehand what model would be adopted, and through this hole and corner deliberation (I can describe it in no other fashion) a model was adopted, not for breeders as a whole, but, I suggest, for the good of the S.F.N.D.A. members only. If meant for the whole body of breeders as an "ideal," then I say why only have seven members of committee? And out of that number, the senders of the only two models submitted, Mr. Wright and Mr. Harrison, both formed part of the committee to deliberate on models submitted by themselves. How strange, is it not? And what is of equal import, how is it that the members of committee hail principally from the same quarter of the globe, as follows:—Paisley, 2; Greenock, 2; Glasgow, 2; Leeds, 1? What about Edinburgh, Dundee, etc.? I am afraid that "Fancier," on due consideration of the facts, cannot possibly say that Mr. Wright's "model" was the adopted one for Scotch breeders as a body. Someone more conversant with the facts in reference to this model adoption might give us their views of the subject. What has Mr. Harrison to say? But, "Fancier," be good enough to let us know who the "vanished" objectors are who have "gone out of the Fancy." I crave the Editor's indulgence to insert this letter, and await with curiosity "Fancier's" reply.

PIEBALD.

SIR,—Noticing a letter dealing with Mr. R. Wright's model, produeed with the assistance of some photographs, in which the writer states:—"Those who objected to its adoption have gone out of the Fancy; the opposition was very faint, but has vanished." But for this statement I would not have troubled to reply. The writer must have a poor conception of humanity, if he thinks the manner in which this photo was produced can be forgotten in such a short space of time. Fanciers cannot blot out those meetings of the G.S.F.N.D.O. in a month or two. Having been closely connected with the Fancy for over thirty years, I have seen nothing which has left such a bad impression during the whole of my career. When one reads of a model by Mr. R. Wright, of Greenock, one laughs, and when I saw his first photo produced, I mean the one he used to carry about in his pocket to show and hand round to fanciers previous to those meetings of the G.S.F.N.D.O.—short, bad body, out of position. I would advise fanciers to hear the opinion of some Paisley fanciers on it. It would do them good. Many of those men clearly, and without favour, spoke their minds. I venture to say these men have not gone out of the Fancy. It is within my knowledge that Mr. R. Wright did approach Mr. J. Harrison, of Greenock, to paint a model, to be called, "Harrison and Wright's model," and he refused. At the same time, Mr. Wright informed him that they would beat all comers. No doubt the same means would have been used, as those by which he accomplished his own. I also know that at a quite recent date Mr. Wright again approached Mr. Harrison with a view to getting him to paint this so-called model. I hold no brief for Mr. Harrison, but merely mention these facts. In my opinion, a man who fails by his own skill to complete anything he undertakes is not entitled to full credit. Give honour where honour is due. The most recent photo of Mr. Wright's model still has deformed feet, the same as shown in photo of Mr. Jackson's old bird, also the head with drive lengthened. Put a powerful glass on it, and you can see the joints. It is not artistic. I would inform "A Fancier" that the opposition it not dead, nor gone out of the Fancy, but alive to-day, as ever, and will be as long as life lasts. What a lovely way "Fancier" has of trying to bluff matters over; but it won't come off in this case.

BELGIAN.

NORWICH PLAINHEAD CLUB FOR NEWCASTLE.

SIR,—As we have three grand societies in Newcastle—viz., Newcastle Good Intent, Northern Crest, and Yorkshire Clubs—there are several Norwich fanciers in and about the district who think it is time we were forming a Norwich Plainhead Club. Seeing there are quite a large number of Norwich fanciers in the North, I think we could form a very strong society. I therefore wish to state that if any of the Norwich fanciers desirous of such a club being formed will communicate with me, I will write and let them know when and where we can hold a meeting, trusting they turn up by the score.

L. STONE.

296, Simonside Terrace, Heaton, Newcastle.

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. It kills all insects, harmless to everything else.

THE DEFINITION OF A NOVICE.

SIR,—A special meeting of the L.C.B.A. will be held at the Napier Tavern, 25, High Holborn, W.C., Friday, May 24th, at 8 p.m. sharp, to discuss rule 17 of the C.B.U. and the universal definition of a novice for all open shows, and all members are earnestly requested to attend (even at slight personal inconvenience), to participate in the debate on such momentous questions. There is also a feeling that there should be a uniform definition of a novice for members' shows—i.e., shows confined to members of unaffiliated societies for London and district—and the co-operation of all societies is cordially invited to attend the above meeting, when an endeavour will be made to settle the question, which can only be done by mutual consent. To be perfectly fair, it has been considered that a chairman for the latter portion should be elected at the meeting, and that such an one should be neither chairman nor delegate of any represented society. It is hoped that all kindred societies will endeavour to take part or convey their views in writing, if unable to be represented.

JOHN TYSON.

TAKING BIRDS BY SEA.

SIR,—I beg to inform "Emigrant," whose query appeared in May 4th issue, that he can easily take birds by the liners to the U.S.A. The charge is £1 per bird—not much when you say it quick!

GASTORO.

AN OUTDOOR AVIARY.

Advice Needed.

SIR,—I keep Canaries, but am not one of those fortunate individuals who have a spare room in which to keep their birds, and I should like to know if any of your readers could advise me how to build a small wooden house in which to stack my cages. I find it very difficult to keep the birds in good condition in a living room, although there must be many who have the same difficulties to cope with. Any advice which could be given me would be very much appreciated.

WALTER S. BREWSTER.

INSECT FOOD FOR FINCHES.

SIR,—Mr. Fuller's letter of May 4th shows how insect life is appreciated more or less by all kinds of birds. A simple plan to obtain a large quantity is to provide oneself with an ordinary umbrella. This open and drawn with the edge against the grass and wayside vegetation will entrap a large quantity. When sufficient are caught the captures may be either boxed, or, simpler still, the umbrella closed and fastened at top by an indiarubber band.

AVICULTURA.

A QUESTION OF IDENTIFICATION.

SIR,—Will any reader of CAGE BIRDS kindly name for me the following:—A nest, built in a holly bush; form, funnel shape; length, about as long as half-pint tumbler; built with dried reed grass, or, rather, woven; and built lengthways across the bush, the entrance resembling a Jenny Wren, and larger at the entrance portion; feather lined, and showing to full view five small eggs—white, with dark red-brown spots, large and thick at the greater end, smaller spots and fewer on reaching the smaller portion of the egg? Are the owners songsters of any calibre, and what would be their menu taken as young nestlings, and further on as adults?

O. S.

EGG-BINDING EXTRAORDINARY.

SIR,—Regarding this extraordinary egg-bound hen of mine, I now write to give you further news. I took her to an experienced fancier, as Mr. Payne advised, and he examined her most minutely. While he had her in his hand, examining her, he was of opinion that the swelling was an egg rather bigger than the usual. The size, shape and touch of the swelling gave him this opinion. Also, after reading Mr. McNaughton's letter, I am convinced that this is so. I may mention in passing that the apex or narrow end of the egg points towards the vent. The fancier, however, after seeing her hopping about in a cage and watching her narrowly, came to the ultimate conclusion that the swelling was a growth of some sort. The fact that the egg was at the right-hand side of, and not below, the vent spoke strongly in favour of this theory. In any case, what would be the treatment? She is lively and eats well, but is in rather bad feather.

WM. R. SMELLIE, M.A.

CHAMPION LAYERS.

SIR,—I read with much interest the letters of two of your correspondents in last week's CAGE BIRDS respecting the number of eggs laid by their birds. It may interest them and your numerous readers to know that one of my Norwich hens has laid a clutch of eight eggs. Until a week ago I was not aware what number she had, as I had never the opportunity of looking in her nest after placing her eggs in, as usual, on the third day of laying, she being a very good sitter. On that day I happened to find her feeding, but no sooner was I in the room than she was in her nest again. Curiosity, however, compelled me to remove her, when, to my astonishment, I found the number as stated. Knowing that, properly, she could not cover or bring up such a number, I took three away and placed under a hen that had laid only two eggs, and placed those two under another which had only a small number. I am pleased to say that yesterday (Sunday) I had five youngsters out, and to-day I note the remaining three are chipping. Is not this good? I ought to add that the hen I gave the three eggs to has been sitting only a week, but is attending to the youngsters satisfactorily. Both hens are separated from the cocks.

WILLIAM H. WILLIS.

Boulge Hall, Woodbridge.

Many letters unavoidably held over.

THE QUESTION OF THE HOUR.

Is Rule 17 to Go?

At the monthly meeting of the Hartlepools C.B.S., held on May 7th, the Hon. Secretary read correspondence from the secretary of the C.B.U., desiring the Society's attitude towards Rule 17, also their opinion regarding the definition of a novice. Respecting the much-abused Rule 17, Mr. Woodhead said it was his opinion that without it the Union would have only a foundation of sand. He was not sure whether it would not be wiser to take a step further, and dispense with the granting of licenses. As the conditions now stood the Union had framed rules that partly favoured non-affiliated societies. In his opinion the societies that refused to toe the line, and yet applied for a license, were in a much better position than those who were affiliated. The granting of a license actually conferred on the society applying all the benefits that the Union can confer respecting the show, yet they were powerless to impose conditions beyond the actual date of the fixture. Consequently their members were at liberty to follow their own sweet will, for the remainder of the season at all events, as regards the selection of shows to which they desire to send their birds, and no one could say them nay. However, he thought a reciprocal spirit was essential to the welfare of the Fancy, and a society that would reap where they did not sow adopted an attitude he did not desire his society to emulate. That the Union had been a great stimulus in the north-eastern district no one could deny, for never in the history of the Fancy were there so many recruits figuring in the catalogues as during the past season; and he unhesitatingly attributed this increase to the powerful influence exercised by the Union, especially in regard to the straightforward manner in which exhibitors were compelled to show their birds.—Mr. Ronald agreed that on a point of honour the Society should adhere to the Union, and thus strengthen their hands to carry out the good work they had begun.—Mr. Williams also supported, and on the resolution being put to the meeting after a lengthy discussion, bearing on almost every aspect of the case, it was unanimously decided to remain members of the Union, and record their sympathy with Rule 17 in its entirety.

Regarding the definition of a novice, proposition No. 3 found most favour, inasmuch as it got rid of the most successful exhibitor in the shortest possible manner, thus making room for those who were novices in the strictest sense.

E. WOODHEAD.

SIR,—May I respectfully point out the injustice of voting on this question by the elected delegates only? Personally, I represent a society of over 120 members, and yet on such an important matter my vote is only equal to another of my fellow-delegates representing 20 members. Therefore his vote is of six times greater value than mine, and this notwithstanding my Association pays the maximum fee, while the society of 20 only pays 3s. 4d. And I am given to understand this is not the spirit of the resolution passed at the Crystal Palace, but that it was to be a vote of all affiliated members. To obviate such injustice I would submit that all secretaries or delegates take the number of votes of their respective societies for and against, and forward them to the secretary of the C.B.U., and thus allow the majority of affiliated members to decide the question. Then, again, I consider the instructions of the Executive Committee nothing short of an insult to the intelligence of all affiliated societies, and most undemocratic. Their annual report is their election address, and it is quite unnecessary for them to endeavour collectively to coerce the Fancy. Such methods only go to prove that they have no confidence in the Fancy, and why should the Fancy place any confidence in them? If the C.B.U. is desired by the Fancy, coercion is not necessary. The Executive evidently are afraid of this privilege being deleted, and resort to a practice of undue influence to obtain their desire, rather than allow the good sense of the Fancy to prevail legitimately. Why do they (the Executive) refrain from expressing their opinion and instructions on the definition of a novice? There is as much justification on such an important and vexed question for comments to guide those whom they evidently consider unable to arrive at a wise decision on the other matter.

JOHN TYSON.

[It will be noticed in our Correspondence columns that Mr. Tyson is calling a meeting to consider these matters, and to which he invites representatives of all London societies. —ED.]

Our society have unanimously decided that rule 17 remain as at present. The members present at the meeting were of opinion that without it the C.B.U. would lose its strength. —F. HOWES, Hon. Sec. Wolverhamptou and District C.B.S.

A Dual Effort.

An important meeting of the Potteries and District C.B.A. was held on May 4th, writes Mr. J. Simcock, the Sec., at which it was decided to make the First Feather Show an inter-club show with the Crewe and District O.S. Delegates of both societies have met, and all has been satisfactorily arranged. Mr. F Bate, of Stoke-on-Trent, will be the judge.

STILL GOING STRONG

OUR DELIGHTFUL

Picture Postcards OF Canaries, ETC.

Executed in Colours BY

Mr. H. NORMAN.

The most delightful and appropriate Postcards for Bird Lovers on the market.

NUMBER.
1. Yorkshire Canary.
2. Cinnamon Canary.
3. Norwich Canary.
4. Stonechat and Blackcap.
5. Goldfinch, Linnet & Bullfinch.
6. The Lizard Canary.
7. The Lancashire Canary.
8. The Green Canaries.
9. Border Fancies.
10. London Fancy, Belgian and Dutch Frill.
11. Scotch Fancy Canary.
12. Crest and Crest Bred.

All represent exact and correct show types and have accompanying descriptions.

SOLD SINGLY OR IN SETS.

One Penny each or Sixpence the Set of Six. State Number required and exact quantity.

Mr. F. Gelder (Bradford), an agent for our postcards, writes:—"Though an out and out Yorkshire fancier, I cannot help but admire the splendid specimens that Mr. Norman has so truthfully and faultlessly represented. Also you will greatly assist and oblige if you can let me have postcards as enclosed order to-night, as I have only a few left of the last lot."

HYBRIDS! HYBRIDS!

AN ENTIRELY NEW SERIES OF

POSTCARDS OF HYBRIDS.

On this Series the following are . . . . beautifully portrayed by Mr. H. Norman :—

(1) Jonque Four-pointed Goldfinch-Canary.
(2) Goldfinch-Bullfinch.
(3) Goldfinch-Redpoll.
(4) Greenfinch-Bullfinch.
(5) Linnet-Bullfinch. [Canary.
(6) Jonque Dark Goldfinch-

Price 1d. each. Post Free 6d. the Set.

On Order from any Newsagent, or from

The Management of a Bird Room.

By W. Down.

A Paper read to the Members of the Exeter and District Cage Bird Society on April 2nd, 1907.

The management of a bird-room, although simple when conducted with a proper system, if not systematically conducted will end in turmoil and trouble; in fact, I have known many throw up the spouge because the surroundings became almost like a heap of rubbish. To the old fancier a subject of this simplicity may be considered by some almost like throwing away time to listen to it—yet possibly even to them there may be a word drop that will be a little help. But it is not the old fanciers I am thinking so much about, it is the young fancier to whom I hope this paper will be helpful and instructive. A great deal depends on the schooling of the young fancier, and it should be the object of the old fanciers to take him by the hand and nourish him into a vigorous, hardy plant; in many cases if left alone he sees no beauty in his hobby, and gives up.

SITUATION OF BIRD-ROOM.

I prefer the situation of the bird-room to be S.W., but birdy men as a rule have to be content with "Hobson's choice." "This or nothing." Wherever it is we must try to make the best of it. Should we be fortunate enough to be able to set a room aside for our sole purpose, we must think ourselves very lucky and favoured, but wherever it is, whole room or part, the first thing to do is to get the room thoroughly clean. Examine the wallpaper; should there be any loose or broken edges, remove the paper and show the bare walls, as loose paper is a great harbour for our friend the "mite." In case "the powers that be" cannot let us have a room absolutely and solely, we must make the best of it by packing up the contents and placing it in the worst and darkest part, and so get the very best, the lightest, and most pleasant for the birds. Having come to this decision, which is a very important one, the next thing is the fitting up of shelves, although some fanciers place the cages one on the other, and some drive nails into walls. I prefer the shelves, they give a great advantage in getting at any single cage without having to shift perhaps three or four cages, or the chance of a nail coming out just when you have a nest full of valuable eggs, and making you lose your temper somewhat.

FIXING THE CAGES.

Having the shelves fixed, ready for the breeding cages, and a space allotted for flight cages, we will consider, if possible, the best breeding cage. What we have to study now is, economy of time. A very great consideration. As most of us belong to the working class, time is money. This being so, we must construct our cages and appliances so that we can get over a very considerable amount of work in a short space of time. The plainer the cages are made the better. Box cages, with all wire fronts, soldered, with loose lifting gates or doors. I will give you the size of my cages: 26 in. long, 11 in. wide, 16 in. high, with wire and dummy partitions. Every joint should be thoroughly matched and bntted, well stopped in to avoid a place for insects.

DEALING WITH INSECTS.

Insects will come as long as we keep birds, do what we will, so the best thing to do is to make a place for them. For many years past I have adopted a simple plan for the top of the cage to act as a door, to be fixed with leather hinges. By this simple means there is just a small open joint between the top edge of the cage and doors—just a place suitable for insects. There you will find them, not by tens, but thousands, if allowed time. Now for the killing process. First prepare yourself with a small glass or cup of benzoline and a small paint brush. Dip the brush in the benzoline, and wash off the top edges and door edge. By adopting this plan you will be able to keep down the insects to a small minimum.

CONSTRUCTION OF CAGES.

The construction of the breeding cage should be carefully studied, and more considered than it is. Our aim should be the comfort of the birds. Therefore, I advise double breeders, front slides, and all slides, seed hoppers and pans exactly the same size; everything should be made on the duplicate system, "fit one—fit all." The perches should be large—oblong—with just the square edge taken off a little rough (to avoid slipping), but be sure and not have any splinters. The object in having a large perch is to give the bird something to grip. Again, attention should be paid to fixing the perch. Many an addled-egg is owing to a badly fixed perch. Fix all your perches throughout the exact distance from the bottom, also sides, or else they will interfere with the working of nest pans. The pans should be hung on a small hook screwed into the back of the cage, so that the rim of the nest pan shall be about half an inch above perch.

WHITEWASH OR ENAMEL?

We now are come to the finishing of the cages. After trying all decoctions of past ages I have come to a decision. The best thing to do is to enamel your cages inside, and stain and varnish them outside. This has a great advantage. Should you require to clean a cage in emergency you can do so by wiping it out with a chamois leather. By the time you have put the cage together it is ready for use, without any fear of damp, which in itself is a great advantage. The flight cages require a little consideration. The longer you can give the flight the better; it is not so much height as length. The flights generally depend on the space at our disposal, but if space is no object I should recommend flights being made in sections, which would work to great advantage, and be found suitable for all requirements. We must not forget another very important item connected with the cages, that is, "the order of the bath." Have a good supply of baths, special large ones for the flight cages, to be used freely in summer and in winter; the bath is as beneficial as their food. But one word of caution: for winter bathing always have a supply of water for to-morrow's baths. Keep it in a pail in the bird-room, by so doing it will be tempered with the normal heat of the room. If fresh drawn from the tap on a frosty morning it is likely to cause chills and other ailments.

POTS AND PANS.

Let all your egg pans be earthenware or glass, and have a few extra ones, as they are always useful. Great attention should be paid to these, especially in the months of July, August and September wash them out with hot water at least twice every week. Nothing turns off egg food so quickly as a sour receptacle. The perforated earthenware nest pans suspended by wire brackets are the best foundation for the nest I have used. Here I must draw your especial attention to the bracket. Have your brackets made specially with extra stout wire, this will prevent the vibration caused when the birds jump on the edge of the nest pan. Let the pan be well set off the side and back, so as to give plenty of room for the hen to turn and twist about. Some hens are very much given to this performance; others you will see them in one position no matter how often you visit your room. Let the pan be a little large than small. I like the felt linings, and sew them in with thread. Generally speaking, a lining will last the whole season. For the nesting you can use either cow or doe hair; 6d. worth will be quite sufficient for 12 pairs the whole of the season, very little is reqnired.

DON'T TRUST TO MEMORY.

Memory is very fickle, so the best way is not to trust too much to it, but prevent mistakes by numbering your cages. Also have a divisioned box with numbers to correspond with cages. As the eggs are laid remove same to the egg box with the corresponding number to your cage, then substitute an old egg or china dummy. When you set the hen on the third or fourth egg gum a paper tab on the cage with number of eggs, date of sitting, and date of hatching. Another help to simplify and expedite matters is to get a large calendar and place the cage numbers on the date when the time is up. You will find this plan helpful, as at a glance you can see the numbers expected to hatch to-day or to-morrow. By so doing you will see your expectations day by day. Most important is this memoranda, as to future generations for use in the stud book. This to the fancier of pedigree stock is as important as the bird; in fact, it is impossible to go on very many years without it. One side should give full pedigree of birds, the other side detailed results of the breeding season.

THE VALUE OF SAND.

Another thing we must not lose sight of, and which is a most important factor at this period, is a plentiful supply of sharp gravel. I like the coarse sea sand. With it add a good amount of broken oyster and cockle shell; you will find all this picked out. Sawdust is used by many breeders, it has its advantages and disadvantages. The aroma of the pine is very refreshing and acts as a deodoriser. The greatest objection to the use of this is, should a chick be pulled outside it is not so easy to detect, and here I would mention when the young are about, it generally occurs the first seven days, they are frequently pulled out of the nest. Therefore it is most advisable to look in the bottom of cages several times during the day. Should one be found give it the usual chance before throwing it away. As soon as possible get all your chicks into large cages; by that means sometimes it avoids a considerable amount of plucking. I have known the hen not to touch a feather until they are 26 or 28 days old. Should a hen start to pluck at that age, she is not long about her work of destruction. The sooner they can maintain themselves the better, and the quicker, reasonably, they are placed in a roomy cage the better for them, as it helps considerably their development.

PICKING THE BEST.

Attention should be given to those that are showing anything of a superior nature. These should be placed in a separate cage, not more than two in an ordinary breeding cage. You now should be thinking of First Feather Shows, and the honours looming in the distance, dwelling with pride on your best young bird carrying off one of the coveted trophies. With this object in view the young must have careful consideration. During the moulting season feed your birds liberally, and partially cover them over with a calico cover, as it assists the moult and keeps them clean.

CARE OF BREEDING HENS.

Keep your stock hens in the flight cages from September until March, as a great deal of the success of the breeding season depends upon how they have been wintered. In February you will see, by their quick flight from perch to perch, the condition they are in. About this time I tie several pieces of twine on wires, to give them a little occupation. They are given to pluck each other; the twine gives them something to play with. I keep them in flight until such time as they are ready for the matrimonial stake. There is nothing to be gained by having the breeding pairs in the same cage two or three weeks before they are fit. They only knock each other about. When pairing I examine the toe nails, if they are sharp I cut off the sharp point, so as to avoid puncturing the egg, and, of course, perform the usual trimming of the vent. I now refer to the feathery breeds.

THE INTRODUCTION.

Shall we just for one moment picture how the cock should he when the hen is first introduced to his lordship. For an instant he walks the perch looking at the hen. Suddenly he stops and pulls himself up to his utmost height, with wings drooped a little, his throat is swollen almost twice the usual size, with the throat feathers at right angles. Then he starts his song of love and admiration, at the same time dancing upon the perch as though his feet were tickled with an electric battery. Generally speaking, business has commenced in less than a week, and eggs will shortly be produced.

FEEDING THE BREEDING STOCK.

I commence to feed up the breeding stock the last week in January, and bring them on gradually. It is much better than cramming them suddenly. All seed before being used should be sifted, and all seed hoppers should be emptied once weekly. It is surprising the accumulation of dust and dross which gets to the bottom. With this dust and dross we must remember "what has lived will live again and produce life," and about September and October you will find a quantity of insect life in the corner of the hopper.

BIRD ROOM APPLIANCES.

In every bird room it is necessary to have a certain number of tools and appliances at hand, such as a crushing mill, pestle and mortar, stone slab, palette knife or long thin dinner knife, teaspoon, dinner fork, scissors, pair each of cutting and round pliers, wire, small hammer, a plane, two buckets—one for water, one for dust. The water bucket should be always half full of water, as it acts as a conductor for all smells. Sweeping brush, dust pan, a table, a chair, a wire-netting swing door in front of window to prevent any escape. It is most advisable and essential to have plenty of fresh air, especially in the summer months, when the window should be open to the fullest extent. With regard to the ventilation of rooms during winter months, when the frost and north-east wind blows, the fancier must use his discretion. Fresh air without draughts is what you have to study in winter, but give them as much fresh air as you possible can.

USE THE BEST SEEDS.

Let your seeds be of the very best quality. Buy as cheaply as you can, but always have regard to quality. It is better to give 1s. or 2s. extra per bushel than buy inferior stuff that is on the market. Buy it by the bushel, as you are saving money by so doing. I refer to Canary seed, other seeds buy in small quantities according to size of stock. During the winter and spring a very good soft food is made of the following heat-forming foods: Oatmeal (baked), barley, wheat, oats, hemp seed ground together, moistened with a little soaked rape seed. The birds enjoy it very much. Add a pinch of salt and carrot or stewed apple, and give twice or thrice a week. Now a final look round the room. Keep a good supply of fresh air, keep the room in the pink of order and cleanliness, have all breeding cages and appliances the same size, with an extra two or three for emergency, have flight cages in apple-pie order, and as large as space will allow, no pictures or cards to be nailed against the walls above the cages, they are a great harbour for the insects.

A USEFUL MEMBER.

I will now introduce to your notice a very useful member of the household, "Our Cat." A she cat is far preferable to "Mr. Tom." A female is more easily trained, and a well-trained cat in a bird room is a valuable asset. Where there are birds mice will follow. Do what you will, they consume a considerable amount of seed and poison more, therefore it should be the work of all good fanciers to pay a visit to the bird room at least once a night. Your faithful cat will be sure to follow, especially if she has caught mice in the room. Another very useful and inexpensive article should be in daily requisition—the thermometer; great attention should he paid to its readings morning and night, this will assist the fancier to a very great extent during the winter months. Dry frost is not to be feared; it is the cold, muggy, damp weather which is the producer of various ailments, such as asthma, bronchitis, indigestion, and bowel complaints.

THE BURNING QUESTION.

Is artificial heat required or not? First, we have to consider the position and situation of room; second, the breed of birds. There are many breeds of an active disposition, never still, others are heavy and dormant. Our birds are domesticated, and as such we should treat them. When one uses the term "heated room," it covers a wide area. The fancier who indulges in this luxury and expeuse for the benefit of his pets treats them with great care and consideration. It must not be supposed for one moment one is going in for cremation. Just for example, say normal temperature six degrees of frost, room (heated), 40 degrees heat, or 35 degrees temperature; room (heated) 45 to 50 degrees. I will leave you to judge whether at 50 degrees it is likely to produce a fainting fit, or injury to the constitution of the birds. Considering my personal feelings, I must say it is more enjoyable to sit in a room at 50 degrees, than 35 degrees or six degrees of frost, and by using a little heat a valuable specimen is saved from ailments and spared to us, perhaps the founder of a very valuable strain. Again, in the very early breeding season, about the latter part of March, how often we get a sharp snip of frost, and cold east winds! To my mind warmth is more essential at this time than at Christmas. Let the temperature drop all of a sudden, as it often does at this particular time of the season and the result is—egg bound hens, cocks down in condition, chilled eggs, dead in shell, etc. Possibly by the use of a little heat all this would be avoided. Ladies and Gentlemen, I must thank you for your kind attention, and, heat or no heat, I wish you all a successful breeding season.

Catastrophic!

The Sparrow is known to be a plucky as well as an arrogant and fussy bird, and a resident in a Glasgow suburb, who has a favourite cat which is fond of Sparrow to luuch, tells in a contemporary how the other day puss made a successful raid, and was bringing in a bird, when a great commotion arose amoug the captive's friends. A well-organised corps of Sparrows swooped down on grimalkin with much forcible language and, attacking her furiously with claw and beak, forced her to relinquish her prey. Since this exciting experience puss appreciates home comforts and a milk diet rather more than formerly.

BENGER'S

Food

assists nature.

It is used mixed with fresh new milk and forms a delicate and nutritive cream which can be enjoyed and assimilated when other foods disagree. It is entirely free from rough and indigestible particles which produce irritation in delicate stomachs.

Mothers and interested persons are requested to write for Booklet, "Benger's Food and How to Use it." This contains a "Concise Guide to the Rearing of Infants," and practical information on the care of Invalids, Convalescents, and the Aged. Post free on application to Benger's Food Ltd., Otter Works, Manchester.

Roller Canary Breeding.

By F. A. LESTER.

A Paper read before the British Roller Canary Club on February 5th, 1907 *(translated from the "Allgemiene Kanarien Zeitung").*

(Continued from Special Supplement, April 27th, 1907).

WHICH BIRDS TO CHOOSE FOR BREEDING.

I have endeavoured to prove in my first article, that one need not be afraid to use in-breeding for the preserving and improvement of the strain, for to a certain extent it is necessary. It is my duty now to speak about further rules which have to be used for birds intended for breeding, so as to produce profitable results. Here I come to a subject which has been dealt with many times, and treated in numberless publications, but as I suppose that young breeders, beginners, will read this article, I write this for their benefit, hoping it will not be uninteresting for an old breeder to freshen up his knowledge. For breeding purposes it is, above all things, necessary to select in good time birds of well developed bodies and of a good strain, and to look well after them. The choice of hens should be made after the moult, either in the months of September or October. Hens which have not finished moulting by this time, or those who moult a second time in the year, should be excluded from next year's breeding. In cocks you have to consider, besides their bodily frame, their singing abilities, and these can only be chosen during the months of December and January, when their song is developed.

DECIDING THE SEX.

Let us consider the first question. How are you to know their sex? In most cases you are able to distinguish the sex of the young ones while they are in the nest, yet it will happen, even to most experienced breeders, in separating them to take cocks for hens, and vice versa. The cock has, as a rule, a more genteel and proud bearing, thicker head, broader tail, and longer legs. The cocks have before the moult, and after the first moult, the feathers round the eyes and bill darker and more shining than the hens. Directly after the moult, or a severe illness, the shining colour is paler in the above-mentioned places, the glossy shining is absent. After the first moult, the double throat ring of the cock is formed; compared with the plain white ring of the hen there is a sharper distinction between the two. The surest sign is the song. Cocks only a few weeks old expand the throat very much while singing, and after six or seven weeks with extended head, while the hen produces only a stuttering note, and lets the head sink low directly. The hens sing very seldom, and, as a rule, only in later years.

FIXING THE AGE.

In the choice of the breeding birds it is also necessary to be able to find out their age. Old Canaries have a hook on the point of the bill, the scales on the feet and toes are strongly developed, and get darker as the years go on. Sometimes you will find young cocks with hooks and partly developed scales. Very often the scales on the feet are removed to deceive buyers. Therefore, you must look at the toes, where removal is impossible. If a bird in autumn, after the moult, brings the full touren, you may depend upon it you have to do with a bird who is three years old. The young Canaries do not sing perfectly after the first moult, they sing three or four weeks softly and leave off abruptly. As regards the age of breeding birds, two year old cocks and two to three year old hens are considered the best. The first are firmer in their song, and of the latter it is said they produce stronger cocks. Some breeders do not care about the age of the birds they employ, which, according to my opinion, is very wrong. Two or three year old hens, which have proved themselves careful mothers, and whose young ones have proved good singers, should not be parted with at any price. The advantages which these hens offer are manifold. You can expect that these birds will be good breeding hens in the third year. Old hens discharge their breeding duties with more calmness than young ones.

One has often observed that older hens kept young cocks to their duty by warning calls. Furthermore, you can judge, by the singing results of their brood in former years, what kind of qualities these old hens possess which cannot be found in young hens. The voices of the hens have a great influence on the song of their young ones. Four year old hens should not be used.

SIGNS OF HEALTH.

To know their health. The first thing which we observe in a healthy bird is his smooth fitting, clean plumage. The figure is lithe and without any faulty parts. The movements are lively, the eyes bright, the breast is fleshy, and the belly sunk in. Further, the bird should take his food with relish, without being ravenous. Birds which continually sit on the feeding vessel, crunching the seed, or are not able to break the rape seed, are not healthy. The bill and the feet must be normally built, and the tail full-grown. The state of health of birds is very often not considered sufficiently, and breeders are surprised when, shortly before the breeding season begins, a number of birds show signs of illness. It is not sufficient to look superficially as to whether there is a fleshy breast, whether the belly is puffed out, maybe inflamed, or whether it shows blue spots. The belly must not be higher than the breast, it must be lower, and falling in towards the tail. The most fruitful hens are those whose belly appears broad and long when you blow the feathers back. The colour of the flesh should be pale yellow, and the intestines must not show through. Red or blue spots on the belly are signs of liver complaint, and demand the exclusion of the bird from all breeding purposes. Sometimes you find a fine blue vein crosswise the belly, or some hens show a high belly—these should also be excluded, as they are inclined to the sweating disease. In proving the health of the cocks, act in the same way as with the hens, but in the exclusion of unsuitable birds be more severe. The belly must fall in; if you notice blue veins on the belly, or blue spots, you must not use them, as they may prove unfruitful the first year, and always are in the second year. Birds who suffer from hoarseness, whose breathing is noisy, or who pluck out the feathers of other birds, pick the eggs, or are quarrelsome, should also be excluded from breeding. The excrements of cocks and hens should be watched, whether they are firm and of a natural colour. If this is not the case keep them out of the breeding-room, because this may be the consequence of disease, which would show itself later on in the room.

KNOWLEDGE OF HEREDITY.

It would be well to be aquainted with the faults which their parents and grand-parents had, as faults are easily inheritable. You should also know whether the hens have bred well, are good feeders, and whether their young cocks have turned out good singers. To be able to prove this satisfactorily it is necessary to keep a genealogical book, which has been repeatedly mentioned in this paper. The breeder should make the firm resolution not to put in the breeding cage any unsuitable birds, as the brood is sure to inherit all the bad faults of the parents.

Practice has proved that good female birds paired with middling male birds produce a better brood than the best male birds paired with middling hens. Most marked is the distinction if the hens do not belong to the same strain as the cocks, which means, do not possess the same form of body and singing peculiarities. The cocks of a stud should have a song as nearly as possible equal to the strain song to which the hen belongs. No less observe, also, that the touren of the old cocks are of good virtue, because the young cocks during their sojourn in the breeding-room adopt quicker the lighter and lesser valuable touren than the beautiful and difficult ones.

BREEDER SHOULD LEARN FAULTS.

The breeder has occasion to learn the song faults and the antics of every bird, as well as the call notes of the hens in his strain, and can form a conclusion how the birds will turn out, yet it is best to pair birds of the same strain. In this way the breeder has it in his own hands, after a few generations, to lessen the faults particular to his strain, or even totally to remove them, and obtain purity of song. Unfortunately, by this method many beautiful touren are lost, and the song of the bird gets poor in touren. Thus arises the question whether the breeder should not take a little fault along with his bargain, so as to keep up the variety of the song, or even increase it. I should advise the latter, because there is nothing to prevent the industrious and attentive breeder to get one or more cocks with greater purity of song and richness of touren, and if the breeder, through keeping a genealogical book, can ascertain from which pair those first class singers came, then he has the hope to obtain from this pair and its brood excellent results in the following year. If the breeder is compelled to introduce fresh blood in his strain, which means crossing, then the breeding becomes more difficult, and he must be content to see for several years inferior results. The same happens if the breeder buys cocks and hens and breeds with a foreign unknown strain. If the breeder is compelled to buy new birds, then let him get the very best, as far as his means permit it. Needs the breeder cocks or hens, then let him buy birds of such strain as correspond with the song of his own strain. Here it may happen, that the breeder, if he gets his birds from outside dealers, in most cases does not know what material he may get. What does it mean? For example, birds of Seifert strain, without the certainty which principal touren these birds sing. If the breeder advertises—"Original Seifert birds, awarded gold medals, and of many excellent touren," the buyer must not expect that every bird of this strain sings all touren to perfection without a fault. Thus it happens very often that the buyer is disillusioned in the performance of the birds sent, and does not find touren which he most expected. Birds of a certain singing direction, Seifert birds for instance, have different singing peculiarities, so that even inside the strain Seifert, unknowingly the most dangerous crossings are undertaken by the breeder. This is the cause why many breeders, notwithstanding their yearly purchases of fine singers, never get a strain of their own.

THE CANARY BREEDING SEASON

Is now with us and everyone who contemplates cultivating Canaries for pleasure or profit, should immediately procure the Standard Work on Canaries:—

House's Canary Manual

PRICE ONE SHILLING. Post Free 1/2.

Superbly illustrated by the Champion Canary Artist, Mr. H. NORMAN. EVERY BIRD DEPICTED IS A VERITABLE MODEL, and shows the breeder what to aim for. Some idea of the popularity of this Practical Manual may be gathered from the fact that under the title of "The British Canary," it has passed its Third Edition, entering upon a Fourth Edition of 5,000 copies under the new title of "HOUSE'S CANARY MANUAL."

The following Summary of Chapters, etc., will show you how completely the ground is covered:—

Aviaries and Cages.	The Young Birds.	Young Birds Dead in Shell.	Exhibiting.
Show Cages.	Food for Nestlings.	Red Mite.	Diseases treated very fully.
Perches.	Hens Refusing to Feed.	Clear Eggs.	Every variety of Canary is treated
Breeding Canaries.	Sweating Hens.	Moulting.	upon at length and illustrated

MR. HOUSE has thoroughly revised and brought this work up-to-date and incorporated a chapter on the "Roller or Singing Canary."

Send 1/2 now and secure a copy hot from the press.

F. CARL, 154, FLEET STREET, LONDON, E.C.

THE BREEDING OF CANARIES.

By J. POOLEY.

(Continued from page 432.)

THE DARK SIDE OF THINGS.

So far I have written on the bright side of our interesting hobby, as though it is just putting the birds together and a nestful of young each time; but there are many disappointments in Canary breeding.

If the birds are not quite ready, we find nests of clear eggs, birds dead in the shell, or a hen is egg-bound; but so far I have not had a case. If I had I should gently catch the hen and drop some warm salad oil in the vent with a feather, and steam her with a jug of hot water. I use a lot of niga seed in the spring; perhaps this is the reason. Sometimes a cock bird pulls the nest to pieces, and another will not let the hen sit; it is advisable to remove such birds. Sometimes the hen refuses to sit all her time, but do not throw the eggs away, even if cold, if you have another hen sitting; give them to her, and she may bring them off. I had a case, and they all hatched. Hens refusing to feed, is perhaps, the worst trouble of all in the breeding season; a change of food sometimes has the desired effect. Often the hen sweats her young. I think frequent bathing a great help to such hens, and to lift her from the nest every time you feed is worth risking. Should you find a young bird lying on the floor, and to all appearances dead, do not throw it away, but warm it and replace it in the nest. Most likely it will recover, and the next time you feed you will not be able to tell which it was.

NOT TIME FOR EVERYTHING.

As there are so many little disappointments, it is too long to write everything one thinks of, but I will not conclude till I give one more drawback, and that is dirty cages and utensils. I clean the cages out very often, so as not to leave any stale food lying about, as it is often the cause of young birds dying from diarrhœa and inflammation of the bowels just as they begin to feed themselves.

I wash all egg pans and drinkers at least once a day, and in the very hot weather twice. I have a double quantity, change them and wash a little later. I take the perches out and clean them often, looking to see if there are any red mite at the ends; if so, I dip them in methylated spirit, paraffin or turpentine, which makes them move about a bit.

It is advisable to take a good look round night and morning to see if any eggs are broken, or any young dead in the nest, as in the hot weather decomposition quickly sets in.

I look at the birds in the nest several times in the day, and the hens get used to it; but most writers say do not interfere with them.

CANARY MANAGEMENT.

By W. BROTHERTON.

A Lecture delivered before the Goldthorpe, Thurnscoe & Dis. C.B.S., on April 20th.

My first word is on the room, which should be thoroughly well cleaned and disinfected before commencing to breed. I advise where the skirting board round the room is open to dust with insect powder, and leave for an hour, when you will find that any red mite that are concealed will have been drawn out by the powder. Then I start whitewashing the room, the bottom first, with very thick whitewash, which will kill all these pests. Then we come to the cages, which require well cleaning and whitewashing. For these I get a quantity of good strong soda and water, say a half-pint glass full of common washing soda to a bucket of water, and run it well into any cracks there are in the cage. You will quickly find any red mite that are there will soon be escaping on the other side, when you must give them a dose of the soda and water, which will kill them. I use whiting to whiten the cages, not lime, as I think a good many birds are blinded by lime as it peels off the cage. Now we come to the birds.

HINTS ON YORKSHIRES.

I like my hens to be of the best type I can get, well up on the legs, with as little feather on the thigh as possible. I contend that a Yorkshire is only half a bird when it is bred, you have to make the other half afterwards in the training. Keep clear of frills in the cock, and see that there is no parting in the feather just above the thigh, which is a very big fault. Some say that to regain size you should pair a Lancashire Plainhead cock with your hens, but I do not advise it, as you are apt to spoil your birds for two or three years by getting them coarse in feather. I advise you to purchase your stock birds of good size, as it is far easier and quicker than crossing with the Lancashire. For colour and quality obtain a good grass green marked bird. It is a mistake to pair your birds before they are ready, as it is often the cause of clear eggs. I prefer young hens, as they are more careful of their eggs, and seem to make better feeders. I also advise that the eggs are left in the nest first round, as sometimes a young hen will not take to them again when they are replaced. When sitting, disturb your birds as little as possible. Never pair a bird that is in any way troubled with asthma, as it is almost sure to break out in the young afterwards. The best way to deal with such birds is to kill them; it is the only cure for that complaint. When a hen is due to hatch, I give nothing but plain egg for two days, then mix a little bread with it, gradually increasing the amount of bread as the young birds get older. I always use two or three different kinds of green food, such as dandelion, watercress, groundsel, and chickweed, and supply them with plenty of that which they eat most. Many youngsters die of constipation, through not being supplied with green food.

NORWICH AND MULES.

We now come to the Norwich Canary. I advise that you select a good bird with a good pipe tail, well up under the wings, and standing well across the perch. A good round head is an important point. The bird should be well filled up in the neck, and not browy, as this shows your bird is not far removed from the Crestbred. The back should be a shade hollow. I do not mean by that a regular spout down the back, but hollowed out a little from head to tail, with a good broad chest.

Use our Picture Postcards.

THE YOUNG NATURALIST.

Prizes of 1s. and two of 6d. each will be given for respectively the best and two second best cuttings or original bits about birds. Competitors must be children under sixteen years of age. All efforts must be briefly and clearly written, and ON ONE SIDE OF THE PAPER ONLY.

Two stars indicate the Winning Contribution; one Star the runners up.

** The Clever Woodpecker.

A friend of mine had two Woodpeckers, and he did not want one of them, so he gave me the hen. I put her in a Parrot cage. I had had her for about 18 days when two wires got broken round the cage and I took it to be mended. I got the Woodpecker and put it into a box, and set it in the open yard; then I took the cage to be mended. When I came back it began to rain. I went and got the box and put it in the dry. At night I fetched the cage and then got the box and took it to it. I opened the lid. There was no bird there, but a little hole in the side of the box. It was very small, but the Woodpecker must have squeezed through it, for I never saw the bird again.—Sent by J. V. MESSINGER (age 13), Magdalen College School, Brackley.

* Our Pet Linnet.

We have a Linnet, which has been in our possession for four years. He is so tame that he will take seeds out of our hands. If we say "Jake, do you want a sunflower?" he will hop from perch to perch, as he is very fond of them. If we put our finger towards the cage without the seed, he gets very angry and spreads out his wings. He pecks at our finger and makes a great noise. When the seed is held up to him he comes forward quite pleased and takes it from our fingers. My little sister, aged two years, has to get up on a chair every day, and she says she wants to give wee Jake his seed. He is a great favourite with all of us.—Sent by LUCY COCKRAN (age 12 years), 374, Main Street, Maryhill, Glasgow.

Parrots.

Parrots are mischievous birds and need strong cages. They also require fresh air and clean water for bathing and for drinking. Parrots should be kept free from draughts, and, as they are natives of a tropical climate, they should be in a warm room in the winter. The food should consist chiefly of grain, such as boiled Indian corn (given cold), also canary seed and occasionally hemp. Some authorities consider much hemp to be too heating. The Parrot also likes sop, with a little sugar, once a day. Meat should never be given, but a little potato or bread will not hurt the bird. Be careful to allow no food to become sour. If a Parrot takes cold, keep the bird very warm. If he picks out his feathers, give a green capsicum.—A. H. EDWARDS (age 11), 100, Paulet Road, Camberwell, London, S.E.

A Homing Canary.

We had a Canary about a year ago which was very tame. We used to let her out of the cage every morning in the dining-room, where it used to fly about. On two occasions, when the door was open she flew up into mother's bedroom and was caught; but once the maid had left the dining-room door open, also the street door, when she flew away, and we thought we had lost her, as she was out all day; but in the evening she came on the bedroom window-sill, when mother put the cage on to another window-sill, and she at once flew in.—Sent by FLORENCE M. SMITH (age 14), 3, Wakehurst Road, Wandsworth Common, S.W.

A Cheerful Noise.

We have two Norwich Canaries. We call them Jim and Joe. They seem to be singing all the time, and when they are singing together we can hardly understand what one another are talking about. We follow your advice in CAGE BIRDS week by week, seeing how to treat them in all ways. Since we have been following your paper they seem to be noisier than ever.—From ELSIE MAY MILES (age 13), 250, Church Road, St. George, Bristol.

* Feeding the Birds.

I live in the country and therefore I am surrounded with birds. I often save pieces of stale bread and make milk sops for the birds. Sometimes nice-looking birds come, other times we only get Sparrows. The other day I was very highly excited. I went down into the cellar and, to my surprise, I saw through the window seven Chaffinches, one Blackbird, a Starling, and a large number of Sparrows having a very good meal in the garden. Just recently I read of a man having lost a hen Pigeon, and the bird had been lost a few days when a boy discovered a cock Pigeon dropping food down a chimney. The man secured a ladder and, to his surprise, found the hen Pigeon stuck fast in the chimney. Sent by G. W. LUNN (aged 12), 12, Henry Terrace, Yeadon, near Leeds, Yorkshire.

A Swan's Love Story.

A few years ago a pair of Swans took up their abode on Moorhouse Tarn, near Wigton, but a ruthless robber secured the eggs, and, heart-broken Mrs. Swan never recovered from the blow. One morning her body was seen lying near the Tarn with her distressed consort hovering round. After keeping vigil for a few days he covered the body with leaves and took a sorrowful departure. Every spring since has the faithful Swan returned to the grave of his loved one, always alone, and, with the Moorhens for company, has spent the summer on the lake. —LESLIE BURNS (aged 8), 4a, Benson-st., Linthorpe, Middlesbrough.

HOW TO MAKE LIGHT BUNS.

By using Eiffel Tower Bun Flour the most inexperienced person can make *light* Buns and Cakes with certain success. Try a 1d. packet. Save Eiffel Tower Labels for 10/6 picture free.

ILLUSTRATED IDEAS

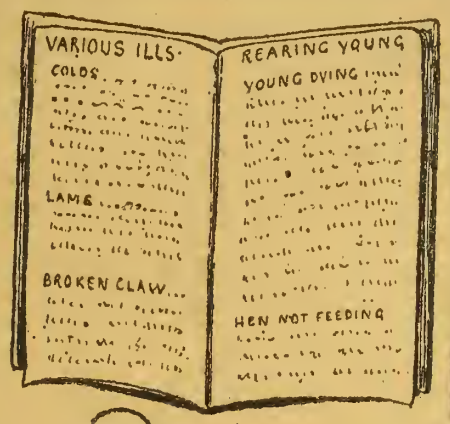
Under this heading we shall illustrate weekly some idea useful to the bird-keeper. Readers are invited to send us particulars of any novel and practical appliance of use in our hobby, either in cage, bird-room or aviary, with a rough sketch of same where possible. Every "Illustrated Idea" used in this column will entitle the sender thereof to a postal order for two shillings and sixpence.

No. 101.

BOOK OF HANDY REFERENCE.

Sent by William H. Gibb, 1, Clyde Road, Brighton.

I am a constant reader of CAGE BIRDS, and each week see items on rearing and feeding, etc., of birds in its pages. Now many of these items when I want later on I cannot find easily without looking through perhaps 20



books, and so I cut out the paragraphs and paste them in a stiff-covered book which I keep for the purpose. You can obtain a stiff-covered order book about 8 in. long and 3½ in. wide for a few pence, and will find that the pages are wide enough for a column from CAGE BIRDS. There is no need to destroy the rest of the paper, as it is always handy to read later on.

No. 102.

TO STORE SPARE FEED AND WATER GLASSES.

Sent by B. E. Holloway, 18, New Park St., Castle Fields, Shrewsbury.

A simple thing I have found useful in the bird-room is a strip of hard wood wired for spare feed and water bottles, as shown below:—

This is a much better way of keeping the bottles and lessens the breakages and possible bad language.

Learning to Sing.

Do young birds learn their songs by direct imitation of their parents, or is the power of song an innate quality? Some observations made by Mr. W. H. Hudson, on a species of Tinamou (*Rhynchotus rufescens*) throw some light on the question. This species has a peculiar and characteristic song or call of its own, and, according to Mr. Hudson's observations, it does not require to learn it. A young bird was taken from the nest when just breaking the shell, and brought up in a house where it could never have had the chance of hearing its parents. Yet long before it was full grown it would retire to a dark corner in the room, and give its characteristic song in great perfection. Here the song must have been innate. The experiments of the Hon. Daines Barrington, in which various species were reared under Linnets, and learned and sang the Linnet song instead of their own, suggest, on the other hand, that the young bird learns by direct imitation.

WILD BIRD LIFE

All communications for this column should be written on one side of the paper only, duly authenticated with the name and address of the writer, not necessarily for publication, and sent to H. Norman, Editor, "Wild Bird Life," "Eastcote," Alma Road, Carshalton, Surrey, by Monday in each week. Original observations and records invited.

The Martins and the Swallows.

The House Martins have appeared in the village; but at present only a limited number of them have been seen. The Swallows are here in full force, and there is every sign of them being even more numerous than last year. We had a pair build under the rafters of a wood shed, and another one higher up just under the tiles, where they both reared respectable families. Some of these youngsters have evidently returned with their parents to the old home, for yesterday quite a dozen birds were seen flying in and out of the building, and it is quite possible we shall have a colony of them this season, for they are not likely to be disturbed.

The pretty Swallow can hardly be classed as one of our song birds, and yet if you should happen to hear some half-dozen of them singing together while sitting in a row, as they will, upon the ridge of a building, it certainly sounds very pleasing. The individual song is a gentle warbling, very well sustained. One is glad to be able to record an increase in these graceful birds, because of late years observers have been under the impression that the House Martins have been pushing the Swallows out, although one can hardly realise the fact, because there is very little affinity between them, except in the manner of hawking for food. The situation of the nest is totally different, and therefore neither bird interferes with the other.

Although the Martins have been seen in the neighbourhood for some time, they have only within the last few days come into the village. Exactly the same thing happened last year. It is a very difficult matter to account for some of the ways of our wild creatures. As far as one is able to judge there is no reason whatever why these birds should not make their first appearance in a sheltered village, protected from rough weather as it is on all sides, with trees and water in abundance, than in other less fortunate places in the district. But such is the case, and although we are well into the month of May, the full number of these happy little birds has not yet appeared. Last season the village was full of them, but the summer had well advanced before the majority arrived. They are no sooner here than building commences. The old nests, which are still left in spite of frost and storms, are inspected again and again, with a good deal of chattering, while the birds cling to the crumbling structure, or the brick walls under the eaves.

The work of collecting and carrying the mud and straw to the chosen site is done chiefly in the early morning, although in bright, dry weather a little will be added during the day. Martins are very careful

The House Martin.

builders, and will wait some time to allow fresh material to dry thoroughly before adding more. It is a pretty sight to see a crowd of them at the edge of a pond or puddle in the road collecting mud. If disturbed before they are ready they simply fly round and return again.

Although the Martin is a pretty bird, with his blue-back body and white rump, he is not so handsome as the Swallow, neither are his ariel flights executed with quite the elegance and grace of the larger bird. The Swallow has a light, skimming flight, sometimes continuing quite a long way before turning, whereas the Martin flies in shorter curves, without the lengthened, skimming action of the other. Identification is not by any means a difficult matter: the longer tail of the Swallow, and the shorter one of the Martin, with the distinct white patch at the lower part of the back, are easily noted.

Notes and Queries.

Something like a Freak!

A red Blackbird, curiously marked with splashes of white over the feathers, has been captured, it is reported, on the Garendon (Loughborough) estate.

The Artful Jackdaw.

Of all our British birds, the Magpies, Jays and Daws are the most amusing and the most artful. They always appear to be on the look-out for some form of mischief, and where they are perfectly tame, and allowed to roam, take a keen pleasure in seeking society, especially that of children. At Halling, a village near Rochester, one is allowed to roam at will, and one of his chief delights is to fly off to the school, some distance away, and watch the children come out. This he does daily, to the delight of the youngsters.

A User of Mud.

There is plenty of variety in the study of wild birds' nests, and he who has the time and inclination to roam the woods and fields will find sufficient to interest him in the homes of the feathered ones. The Thrush, Swallow and Martin all use mud in the construction of their nests, but they are not the only birds to do so, for the Nuthatch makes use of it, although not quite in the same manner. She finds an old tree with a hole in it, and if the entrance is too large (and it generally is), she plasters it up with clay, leaving just sufficient opening for her to go in and out. One can hardly find a reason for this habit. Anyone would think simply a hole in a tree would do as well for a Nuthatch to build in as it does for a Woodpecker, Wryneck or Starling.

Hawks Still Thriving.

Hawks have not been quite exterminated, in spite of constant persecution. In wooded districts one may occasionally be seen roaming the fields and beating quietly up the tall hedgerows. The Sparrow Hawk is particularly fond of working in this way, and many a Finch or Bunting has been pounced upon before it was aware of the enemy being in the district. Occasionally one may find evidence of the tragedy—some small mound of earth, with the feathers of the victim strewn around. We can then identify the luckless one, as we did the other day. It was a young Thrush that had, unfortunately for him, come within reach of the destroyer. And thus his young life was cut off almost as soon as commenced, his immature wing tips proving that he was quite a baby.

The Cuckoo Extraordinary.

A friend sends me a few interesting notes about the Cuckoo. It appears a Robin took possession of a bag hanging in an outhouse in the garden, about 50 ft. from the house. She laid her batch of eggs and commenced to sit. To the astonishment of the owner, only one bird was hatched, and there were no signs of the other eggs. In sending me particulars, she said: "All the other eggs must have got rolled into one, for the young bird was bigger than a Robin and had a large, gaping mouth." Undoubtedly it was a young Cuckoo. I should very much like to have seen it, because, in the first place, the egg must have been deposited long before the average time of the Cuckoo; and, secondly, the bird must have gone into the garden, which is a small one, and entered the shed to find the Robin's nest.

FOREIGN BIRDS—continued

OUTDOOR AVIARIES.

We can supply the following from our own outdoor aviaries:—Magnificent pair Red-headed Finches, now nesting, twice moulted; Bengalese, cock Zebras, Silverbills, Ribbons, Avadavats (in colour), Spice Birds, Waxbills, Zebra Doves, Bronze Wing Mannikins, Budgerigars, cock Blossom-head, White-headed Lovebirds, etc. True pair Quakers, twice moulted, nesting.

ALSO INSIDE AVIARIES.

Black-headed Gouldians, Grass, Masked, Bicheno, Yellow-rump Finches, Ruficauda, Pectoralis, Diamond Doves, Tricolour Nuns, Spice Birds, Zebra Finches, Cordon Bleus, Waxbills, Yellow and Green Budgerigars, Red-headed and White-headed Lovebirds, Weavers, Tricolour and Black-headed Mannikins, true pair Quaker Parrakeets, nesting, etc., etc. Enquiries invited.

Live Stock Stores, Station Square, Harrogate, and at Hull.

PARROTS.

We offer some of the best Parrots in the world. This being our opening week, all the following have been specially secured. Every bird is sent out on approval, either cash or on the deposit system of this paper. Our Mr. Flanagan, sen., is the oldest Parrot dealer in this city, and one of England's greatest judges. Note the address:—W. Flanagan and Son, 425, Scotland-rd., Liverpool. Telephone 0412 Royal.

PARROT LOVERS

Should send post-card immediately for our new enlarged book entitled "Parrot Prattle" (registered copyright, infringers and imitators will be proceeded against). This book contains 120 pages of very interesting facts, and gives valuable advice and hints to all parrot buyers. Full details of our original system of selling Parrots on four week's trial, at our risk, which we were the first to introduce. We sell Parrots of all descriptions on four weeks' trial, at our risk, before settlement. Cheapest and best in the Kingdom, and any Parrot sold by us, and not giving full satisfaction, will be exchanged any time within twelve months. Remember we lead and others try to follow. Write to other dealers as well as us, and judge for yourselves. Lists of Parrots for sale and above book post free on receipt of postcard.

PARROT AVIARIES, MORECAMBE.

WANTED.

WANTED, talking Parrots, Canaries, and Linnets, cheap for cash.—J. Thorn, 138, High-st., Woolwich.

WANTED, one or two good clear yellow Crestbred hens.—Greenwood, Lansdowne, Oldham.

THREE grand Goldie Mules, breeders, offers clothing, boots, Canaries.—Cook, Pembridge.

WANTED, two young healthy hen Canaries.—Dunsmuir, 41, Titchfield-st., Kilmarnock, Ayrshire.

WANTED, fancier's surplus Foreign birds, cheap for cash, any kind.—C. P. Arthur, Melksham.

WANTED, address to get singing Canaries from Hartz Mountains, Germany.—Law, Dulcek, Ireland.

WANTED, Canaries, Mules, Siskin hen, exchange British.—Williams, 12, Kingsleigh-rd., Easton, Bristol.

WANTED Canaries, Crests, Yorkshires, Norwich, Linnets, Goldfinches, Bullfinches, Thrushes, Parrots.—Baker, Herbert-st., Bedminster.

WANTED, birds, any description, British or Foreign, for aviary, large or small.—E. Southcote, Stoke, Ilminster.

WANTED, all kinds of Canaries and British birds, any quantity, for cash.—Wressell, Crowle, Lincolnshire.

WANTED, all kinds of British birds, Canaries, in exchange for joiner's tools.—W. Emmett, 220, Thistle-st., Glasgow.

WANTED, Canaries, exchange Short-faced Tumblers, 5/- pair, bargain.—19, Piccadilly, Westcliff-on-Sea.

WANTED, for cash, good singing Canaries or Mules, also all kinds of Britishers.—A. Leitch, East End Bird Mart, Gallowgate, Glasgow.

WANTED, male Persian cat. Particulars to W. Booth, 22, Tavistock-rd., West Jesmond, Newcastle-on-Tyne.

WANTED, your surplus stock you don't want; will exchange it for stock you do.—Pearson, Greenwich.

CANARIES.—Wanted to purchase, surplus stocks young or old; fair price given.—Clarke, 17, Brandville-rd., Yiewsley.

CHILD'S three-wheel tricycle, for boy six years old, exchange birds.—James, 201, Chester-rd., Hulme, Manchester.

WANTED, offers in British or Foreign birds for wavy-coated Retrievers, eight weeks old.—Miles, Bird Specialist, Norwich.

WANTED, Siskin cock, large, in breeding condition, one who has filled eggs, state price.—L. J. Arrighi, Harrison-view, Watson-cres., Edinburgh.

WANTED, two good Yorkshire cocks, will exchange gent's good silver watch.—O'Donnell, 58, Kirk-st., Calton, Glasgow.

WANTED, good Norwich, Yorkshire, or good cock Mules, no rubbish, cheap for cash.—J. Marshall, 20, Bushey-rd., Hartington, Middlesex.

WANTED, one hen Californian Quail, three hen Zebrafinches, on approval.—David Pedlow, Lurgan, Ireland.

WANTED, all kinds British birds, Canaries, Rabbits, Fowls, Chickens, Ducks.—Brain, Aston, Birmingham.

WANTED, talking Grey Parrot, for good double barrel breech-loading gun; approval both ways.—R. Tait, Loans, Troon, Ayrshire.

WANTED, hen Zebra Finches, Green Budgerigars, hen Blossom-head, hen Bullfinches, hen Chaffinches, for outdoor aviaries.—Live Stock Stores, Station-sq., Harrogate.

WANTED, any quantities of Canaries (any variety), Goldfinch and Linnet Mules, for cash; approval, will deposit with CAGE BIRDS.—Marsh, Freemasons' Aviaries, Pereira-st., Bethnal Green.

WANTED, Fowls, Chicks, Pigeons, offers six mixed British birds, 5/- lot; nine cages, singing cages, Larks' cages, 9d. each; good Nanny goat, 6/-.—Long, 18, Front-rd., Clapton.

WANTED, two large steady hen Bullfinches, or large steady Goldfinch cock, exchange gentleman's new umbrella, steel frame, and gold-filled guard, or cash.—Bell, 30, Joicey-st., Pelaw-on-Tyne.

WANTED, from catchers, Linnets and all kinds of British birds, best cash prices given, any quantity taken; send particulars.—Denuerley, Bird Dealer, Central Aviaries, George-st., Hyde, Cheshire.

WANTED, for abroad, will give 1/6, cock Bullfinches; 2/- cock Goldfinches; cock Larks and Brambles, Linnets, Yellowhammers, 6d. each; cock Canaries, 4/6; small or large quantities, for cash.—Bird Stores, 423, Attercliffe-rd., Sheffield.

WANTED, any quantity of Goldfinch Mules or Linnet Mules, for cash; no rubbish wanted.—Wm. Shaw, 97, Essex-rd., Islington, London, N.

WANTED, good double barrel gun, give part exchange two vols. "Household Physician," by Gresham Publishing Company, cost 37/-, perfectly new; approval anywhere; would sell 30/-.—B. Young, Oulton Stores, Oulton Broad.

SALE OR EXCHANGE.

Mainly British
To be Sold or Exchanged

VERY handsome piping Bullfinch 10/-; or exchange.—Mrs. Joblin, 17, Spa-rd., Bermondsey.

PAIR of Goldfinches, 3/6; or exchange.—Stowe, Burnham Market Station, Norfolk.

BULLFINCH, cock, winner, cock Twite, cock Redpoll, sell 6/6, or exchange good yellow Norwich hen.—Clark, Church-st., Garmouth, Morayshire.

SPLENDID 1906 cock Goldfinch and Canary Mule, incessant songster, sell 7/6, or exchange.—John Lodge, Inkerman, Skelmanthorpe, Huddersfield.

ALWAYS USE OUR

DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor for the *bona-fides* of either buyers or sellers. In all transactions the adoption of our Deposit System should be insisted upon.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient, plus the extra postage incurred, has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller, stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from *both* parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has *not* been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or, if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

PREPAID ADVERTISEMENTS

UNDISPLAYED.—Three Words a Penny up to eighteen words, MINIMUM Fourpence. One Half-penny per Word for each word over eighteen.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and, after the first eighteen words, are charged at two words a penny, but no single advertisement, even if accompanied by others, will be charged at less than the minimum price, viz., Fourpence.

Headlines or Footlines 6d., 9d., 1/-, 1/6, according to size.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL. Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London. Terms for Display Advertisements on application.

SANDIFORD'S
FAMOUS
ROYAL RED.

10 Tons on View OF THE BEST IN THE WORLD.

Mr. W. Dormer Rishton, May, 1907.—"Sir,—Save me 112lbs. Royal Red; all my winners last year were fed on it. Mr. E. Godley Riston, April, 1907.—"Sir,—You must save me 56lbs. Royal Red. I never had such a hot colour before last season. It was splendid, as proved by my wins at all leading shows, which were: 77 1sts, 68 2nds, 55 3rds, 42 4ths, 43 vhc's, 34 hc's, 102 specials." Mr. E. Baker, Cowes.—"Sir,—Once more I have the pleasure of congratulating you on the success of Royal Red. I fed all my birds entirely on your feed. My clear yellow, which won cup and medal for hottest bird was red hot. At the Palace I won three 1sts, one 2nd, two 3rds, etc., four specials, for best Norwich. In such company I think it speaks volumes. Also was very successful at Plymouth, Portsmouth, Dulwich and Peckham, L.C.B.A., Newport, Bournemouth, Camberwell Baths, etc. Send me 1 cwt. of your new feed." Mr. W. R. Miles, Chichester (another big Palace winner), April, 1907. "Sir,—Send 30 lbs. Royal Red, 7 lbs. hot, 1 cwt. Spanish canary." Mr. H. W. Battye, Huddersfield.—"Sir,—Send me 56 lbs. Royal Red. Last season's were splendid." Mr. J. Howard, Norwich, April, 1907.—"Sir,—Send 2 cwt. Royal Red, 28 lbs. hot, to start with. They never saw such colour as last year in Norwich." Mr. A. G. Davis, Manchester, April, 1907.—"Send 112 lbs. Royal Red, 14 lbs. hot Natal." I need hardly point out that the success of Royal Red Feed has been even greater than ever during this last season. I will just point out the great show, Crystal Palace, 1907. Clear yellow, Norwich, Class of 21—1st, 2nd, 3rd, 4th, vhc. Clear Buff, Class of 18—1st, 2nd, 4th, vhc. Tick. Yellows, Class of 19—1st, 2nd, 3rd, 4th, vhc. Tick. Buffs, Class of 20—1st, 3rd, 4th, vhc. Unflighted Yellow, Class of 30—1st, 2nd, 4th, vhc. Yellow Hens, Class of 20—1st, 2nd, 3rd, 4th. Buff Hens, Class of 25—1st, 3rd, vhc. Champion Cinnamon Classes, Yellows—1st, 2nd, 3rd, 4th. Buffs—1st, 2nd, 3rd. Unflighted—1st, 2nd, 3rd. Hens—1st, 2nd, 3rd, 4th. I have only pointed out the great show of the world. Every one of above winners were moulted on Sandiford's Royal Red Feed, these being classes where you can't win without colour. I think above enough to prove to anyone that there is only one colour feed in this world; that is Sandiford's famous Royal Red Feed. Send stamp for samples.

Prices this season:—**1 lb., 2/-; 2 lbs., 3/5; 5 lbs., 7/6.**

Hot Natal, **2/- lb., 2lbs., 3/8.** Note, these prices are carriage paid. Agents and Wholesalers send for this season's prices.

BOOKS.
THE HYGIENE OF BIRD KEEPING.
By W. GEO. CRESWELL, M.D., L.R.C.P., F.Z.S.
Price 1/1, post free from CAGE BIRDS Offices,
154, FLEET STREET, LONDON, E.C.
OPINIONS OF THE PRESS.
LANCET: "This little book will be welcomed by all lovers of birds, whether ornithologists, aviculturists, or the owners of a single pet songster. The author deals with his subject in a thoroughly practical and scientific manner, and the results of his experiments prove the fallacy of some rule-of-thumb theories. . . . The book is well illustrated."
COUNTRY LIFE: " . . . a surprising amount of really valuable advice for all who keep small birds, whether in cages or aviaries. . . . Those who approach the subject with an open mind must admit the cogency of the author's arguments; and these, backed by a very wide experience at first hand, will prove hard nuts to crack for many of the champions of the 'good old methods.' . . . We venture to think that his experience will pave the way for a revolution in the methods of bird keeping in the near future."

BEGINNERS: You MUST read the ANNUAL.

POSTAL ORDERS PLEASE.
Owing to the new Post Office Regulations respecting the use of stamps upon Postal Orders, we are reluctantly compelled to state that in future our rule re **sending Postal Orders as far as possible instead of stamps** *must be strictly enforced. Advertisers unable to obtain Postal Orders must remit an extra halfpenny with every four penny stamps.*

FOR ONE MOMENT
Just consider what it means to you when selecting birds for your breeding stock to get the best possible birds at the most reasonable prices. If you have this desire I would remind you that Miss Storey has the best collection of birds in England, birds of the proper type, in breeding condition, at reasonable prices. Do not be misled with unshapely rubbish, when you can have the very birds you require at the same price, carriage paid to your address, on seven days' approval and no risk whatever, until you are perfectly satisfied with your purchase. I yearly sell many thousands of birds, and give every customer satisfaction. I guarantee to please you if entrusted with your order. I am now offering exceptional good value in typical Norwich cocks, 7/6, 8/6, 10/6, 12/6, 15/-, 20/-, and 25/- each. Hens, 4/-, 4/6, 5/6, 6/6, 7/6 each. Matched pairs, 10/6, 12/6, 15/-, 17/6, 20/- upwards. I receive many thousands of unsolicited testimonials, which are all open for your inspection. To make sure of satisfaction, send me your orders for whatever Canaries or British birds you require. Full new illustrated list post free. All Canaries sent carriage paid, on seven days' approval, at my risk. Travelling cages, 2d. each. Note the old and only address: Miss E. L. Storey, Bird Specialist, Crowle, Doncaster.

NORWICH—continued.

High-class Norwich and Yorkshire Canaries.

JOHN C. BARNES,

BREEDER AND EXHIBITOR,

149, DUNCOMBE STREET, WALMSLEY, SHEFFIELD.

Rollers & Singing Canaries.

CORKINDALE, Studley, R.S.O., has a few good British Rollers, cocks, 10/-, 15/-.

FIRST round 1907 songsters 2/9 and 3/- each; approval.—Hoyle, Klondyke, Featherstone.

THREE pure Seifert hens, 4/- each, 10/6 lot; one Hummel Andreasberg hen, 3/6; all in breeding condition, cold-room.—16, Alexandra-rd., Morecambe.

BARGAIN.—No time. Seiferts, one cock, two hens, 13/6; twice moulted cock Goldfinch, 5/-; ditto Linnet, 4/-; first P.O. £1 gets lot. Canaries alone worth the money.—Tomlinson, Thistleberry, Newcastle-under-Lyme.

ON sale, five hen Canaries, 2/6 each; 11/- lot; one cock, 7/6; all 1906 cold-room bred English Rollers, warranted splendid breeding condition; one flight cage, 36 by 11 by 20; room wanted for British.—Walter Whitehead, 15, Bowler-st., Shaw, near Oldham.

HARTZ MOUNTAIN

Roller cock Canaries, direct from Hartz, beautiful birds, only 3s. 9d. each; 21s. a stick, try one.—Varney, Stratford.—"The Elms, 18, Whitehouse Loan, Edinburgh, January 1st, 1907.—Hummell arrived safely, and sings lovely; it is a pretty bird, and gives satisfaction.—N. Turubull."—"January 2nd, 1907.—Birds arrived, are singing well.—R. M. Lee, 79, Mill Street, Crewe."—"Broom, Newton Mears, Glasgow.—The birds arrived in good condition; I am well pleased with such value.—J. Broom."—"January 2nd, 1907, 32, Easson Road, Darlington.—Bird to hand. I like the song wonderfully well, and thank you for your prompt delivery and attention to my instructions.—H. Hutchison."—Send all orders to Varney, Stratford, London.

BE IN TIME.

If you require a high-class Roller, I must urge you to order early, as I have only 500 of these marvellous songsters for disposal; when these few are sold I cannot supply any more until next season. These are not a lot of wasters picked up in German markets, but the whole stock of one of the most noted Roller breeders. Every bird is cheap at 20/- each; but as I have bought them right I offer these high-class birds at about half their value. Genuine highly trained cocks, in full song, by day and gaslight, 9/6, 10/6, 12/6, 15/- each. Pure Roller hens, of same breed, 3/6, 4/6, 5/6 each. For loud songsters that will make the place ring with their song, try my Hartz Mountain Rollers (only a few left), cocks, in full song, 6/6, 7/-, 7/6 each; matched pairs, 9/6, 10/6, 11/- pair. I have a lot of selected Yorkshire and Norwich songsters, 7/6, 8/6, 10/6. Matched breeding pairs of Rollers, Yorkshires, and Norwich Canaries at 10/6, 12/6, and 15/- per pair. See page 429 and previous issues for genuine unsolicited testimonials. All I ask is to let me send you one of my birds, carriage paid, on seven days' approval, at my risk, and you will be convinced that the quality of the bird is the best, and the prices are the most reasonable. Send postcard for my new illustrated list. Neat travelling cages, 2d. each; all birds carriage paid, on seven days' approval.—Miss E. L. Storey, Importer and Breeder, Crowle, Doncaster.

Hummel Rollers.

Finest Rollers imported. To speak well of the Hummel is to gild refined gold. Testimonials from customers who say the Hummel is still singing as sweetly as when purchased four, five, six, and seven years ago. All Hummels have delightful, deep, delicate bow roll, hollow roll, hollow how roll, du pipe, hollow bell roll, graud round hass roll, vibrating hollow roll, and charming water bubble roll; one price only, 12s. 6d.; no fancy prices; Hummel hens, 3s. each; a beautiful pair of Hummels for 15s. St. Andreasberg Rollers, 5s. and 7s. 6d. each. Hummel Schoolmasters, 20s. each, better than can be obtained elsewhere at treble the price. Thousands of testimonials have been published hy me in CAGE BIRDS from satisfied customers. I guarantee strictly honourable trading and satisfaction to all.—Varney, sole proprietor and importer of this remarkable Roller Canary. Twenty years advertiser.—Varney, Stratford, London. Export a speciality. "The Schools, Overton, Ellesmere.—Hummel arrived, it at once commenced to sing—yes, a song worth listening to. It is the most exquisite songster I ever heard—decidedly a perfect Roller. I may say I never expected such perfection; they are worth all you charge for them. I must thank you for your courtesy, and shall be ahle to recommend your firm to those who require birds and not rubbish."—F. Rohbins, to Varney, Stratford, London, Sole Proprietor and Wholesale Roller Canary Importer and Dealer.

"EGGERTINE."

It is the best, purest, aud greatest hone and muscle forming food ever known, as the analytical reports of most eminent authorities prove. It will bring hens into sound and robust condition for hreeding as nothing else will. This during the past twenty years has been proved hy thousands. It is a genuine egg food made with fresh laid English eggs, with white, of course, included (and NOT foreign preserved yolk of egg) with other valuable properties combined. Tins, post free, **1s. 3d.**; large size, **2s. 6d.** There is a saving in the larger size.

"ASTHMARINE."

This remedy has the largest sale of any similar article by far. Beware of Imitations! For all lung affections it is marvellously efficacious—not a liver burner, but both soothing and healing, 9d. and 2s. 6d. per bottle, post free. Once used, always kept ready for any sudden attack.

Wrought Wonders.

16, St. Mary-st., Dundee, April 28th, 1907.—Please send me two bottles of Tonic Drops. The last has wrought wonders with my birds.—D. Kydd to W. Rudd.

Another Convincing Fact.

Thirsk, April 24th, 1907.—Thanks for the Asthma rine. It has quite cured my hen Canary (which I could ill afford to lose just now).—A. Villier to W. Rudd.

Done Such a Lot of Good.

The Cottage, High-st., Heacham, April 18th, 1907.—Please send me one bottle of Asthmarine; I find it splendid. Done such a lot of good.—E. Graver to W. Rudd.

W. RUDD,

THE Bird Specialist,

NORWICH.

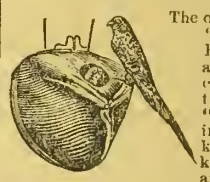
BOOKLET FREE.

FINEST Talking Parrots. I only deal in Parrots that will make first-class talkers; no rubbish. I am willing at all times to send my Parrots on four weeks' trial and three months' talking guarantee. Why? Because all my Parrots are young, strong, and reliable. My lifetime has been spent among grey Parrots, both at home and abroad. I guarantee every customer every satisfaction. Grey Parrots are my special fancy. I have trained them, know their wants, and can give every purchaser a bird that will please him in every way. I can supply grey talkers, not thinkers, that will say almost anything, at reasonable prices. Before you purchase a grey or green Parrot, send for my Booklet, entitled "Talking Parrots." All my birds are sent on four weeks' trial, at my risk. Send postcard for catalogue.—Mrs. Forster, Princes Park Aviaries, Violet Street, Liverpool.



The only reason why "Cage Birds," "Feathered World," "Fur and Feather," "Exchange & Mart," and "Poultry," have all in their correspondence columns advised their readers to employ my **"IMPROVED SECURE" HUSKS** in preference to any other kind, is because these experts know they are infinitely superior and more reliable for successfully rearing Budgerigars. This is their opinion and the result of 16 years test and experience—not a few months. Surely all these Press Opinions are more convincing than a testimonial from any one man. Beware of new comers! They spring up every few years with a tremendous splash and disappointing statements, their rubbish quickly breaks up and falls to pieces, so if you have been ensnared and disappointed, **try my "Secure" Husks** which for 16 years have been first favourite. **4/6** dozen, smaller quantities **5d.** each. Few Cockateel nests boxes, **1/6** each. Illustrated pamphlet, entitled "Budgerigar Breeding," free on application.

HARPER, Upper Villiers Street, WOLVERHAMPTON.

PARROT PROBLEM

solved. For full proofs send postcard at once for my large book, "Parrot Prattle," now containing 168 pages. This is the most wonderful book ever offered free of all charge to all Parrot fanciers. (This "Parrot Prattle" is registered copyright, and all infriugers and imitators will be proceeded against). It contains hundreds of testimonials from all parts with full names and addresses, many interesting facts, and gives valuable advice and hints to all parrot buyers. Full details of our original system of selliug Parrots on four week's trial, at our risk, which we were the first to introduce. We sell Parrots of all descriptions on four weeks' trial, at our risk, before settlement. Cheapest and best in the Kingdom, and any Parrot sold hy us, and not giving full satisfaction, will be exchanged any time within twelve months. Remember we lead and others try to follow. Write to other dealers as well as us, and judge for yourselves. Lists of Parrots for sale and above book post free on receipt of postcard.

PARROT AVIARIES, MORECAMBE.

POSTAL ORDERS, PLEASE.

Owing to the new Post Office Regulations respecting the use of stamps upon Postal Orders, we are reluctantly compelled to state that in future our rule re **sending Postal Orders as far as possible instead of stamps** *must be strictly enforced. Advertisers unable to obtain Postal Orders must remit an extra halfpenny with every four penny stamps.*

JOHN D. HAMLYN

221, ST. GEORGE'S ST., LONDON DOCKS.

Foreign Bird Queries continued from p. 475.

Napoleon Weaver Going Out of Colour.

My bird went into colour on the 1st of April, but at the end of the month he commenced to go out again, and is now in winter dress. Can you give me the reason, and will he come into colour again this year? What are the sexual distinctions of the Cape Canary? Which is the better songster, Cape Canary or Alario Finch?—"THANK YOU."

"Thank You."—It is very usual for them to come into colour about the time yours did. I do not at the present time possess the Napoleon, but two of my Madagascars were in full colour about that date; one was not so forward, and he only has the red half way down the underparts, the cold weather having checked development. It is doubtful if it will come into colour again this year; if so, it will probably be only partial, and occur in July or August. It was the cold weather coming after the spell of bright warm weather that has thrown your bird out of colour. I find this happens with many species during their first year in this country, and that afterwards the weather does not affect them. You diet is very satisfactory, and cannot be improved upon. The female of *Serinus canicollis* is slightly smaller than the male, the yellows not so rich and the upper surface duller, browner and more dusky than that of the male. Both the Alario and Cape Canary are fine songsters, but the Alario, in my opinion, has the more sustained song, that of the Cape Canary being the sweeter, but not so varied, as that of the Alario.

Gouldian-Canary Hybrids.

Can I expect to breed from a male Canary and a female Black-headed Gouldian? If so, what kind of nest, material, and food must I give?—L. A. FOOT.

L. A. Foot.—I have never heard of such a cross; at the same time I can see no real obstacle in the way, but it is probable, as with all Hybrid breeding that such may not come off the first season. It is certainly worth trying, and I should recommend that they be kept out of hearing of other Gouldians. A German travelling cage would be as likely a resting receptacle as any, with hay and long grass as nesting material. As to diet, give canary, white and spray millet, oats, and rice in the husk (Paddy rice), with grass in flower and other greenfood, cuttlefish, a piece of rock salt, and, when they are nesting, supply a little of some good soft food mixture, or the following slightly damped:—crumbled spong cake, ants' eggs (very best), dried flies, and crushed Osborne biscuits in equal parts. Let their cage be a roomy one, or it is no use looking for any result, and more than that, Gouldians have a habit of soon "shuffling off" when in confined quarters. Shall be interested in hearing details of the experiment.

STRATFORD & EAST LONDON F.S.

Meeting May 16th. Office of hon. secretary was declared vacant. The balance sheet when presented by that official a few weeks ago was questioned by certain gentlemen, and mole hills soon became mountains. Some bad feeling arose, which, combined with other things, terminated in a popular member of the cage bird section calling a special meeting, as allowed under the rules, "to consider the future welfare of the society." Members turned up in force, and although asked by Mr. J. Smith (the chairman) to curtail their grievances, within a few minutes the secretary was engaged in a wordy warfare with several of the members. The matter was eventually closed by the meeting voting the secretary out of office. Mr. S. Sheldrick, of 86, Grove-rd., Bow, was elected hon. sec., and Mr. T. H. Houlding, asst. hon. sec. Messrs. H. Mason and F. Jayne were appointed hon. auditors. On the proposal of the chairman, a vote of thanks was accorded the late secretary for his services. At the conclusion of the business a special meeting was held to consider the appointment of an hon. solicitor to the society. Mr. W. Daybell, of the Broadway, Stratford, when approached on the subject, kindly consented to fill the office, and that gentleman was unanimously elected. A vote of thanks was accorded Mr. Daybell for his interest in the society.

SCOTTISH CREST CLUB.

Committee meeting held Glasgow, May 11th. Present, Messrs. J. McLay, J. Young, J. Noble, G. McPhail, G. F. Adamson, Wm. Griffiths, and the Secretary. The result of ballot was read, and the president and vice-president were elected. Mr. McLay was voted to the chair for another year, which he accepted after expressing his desire to see the honour go round. All the vice-presidents were re-elected, and Mr. Chas. Campbell added. Mr. A. Miller sent in his resignation as auditor, and Mr. J. Munro was appointed. Applications were read from Glasgow and West of Scotland, Kilmarnock, and Dundee Associations, soliciting the patronage of S.C.C. Mr. Young moved, seconded by Mr. Munro, that we hold our Show with Kilmarnock if suitable terms can be arranged. Mr. G. McPhail moved an amendment, seconded by Mr. Griffiths, that it be left over till next meeting. On a vote being taken the motion carried. The advisability of selecting a judge out of the S.C.C. members to allow all of them to participate in the competition for medals was discussed. Finally, Mr. Griffiths moved, seconded by Mr. C. Campbell, that the selection be as formerly out of the official six, which carried. The report on the Club Show Cage was called for, but no information had been received. Some drinking tins of various shapes were brought forward by Mr. Young for selection, but this was left over till next meeting, when a few more may be brought forward. Two new members were proposed and accepted, Wm. Thornton, Kilmarnock, and J. Ferguson, Stirling. Next meeting last Saturday in June.—A. CHALMERS.

THE SHOWS.

HARPENDEN.

This fixture, which has year by year increased in attractiveness and in its dimensions, was held in Rothamstead Park on Whit Monday. The arrangements were ably carried out by the stewards, Messrs. Bard, Wilkinson, Willis, Willmott, Godden, and C. W. M. Wilkinson, whilst Mr. J. B. Townend, the popular secretary, was as energetic as ever, and kept a keen eye over all. With such enthusiastic workers and such generous patrons as it possesses, Harpenden cannot fail to be successful. Considering that it is right in the heart of the breeding season, it was not surprising that entries in Canaries were poor; but in the other classes they came up well, and the quality was splendid, especially in the British section. In fact, in this section the chief interest of the show was centred, and most of the exhibits staged would have done (in fact, have in the past) credit to many a show of greater pretensions. Mr. C. A. House judged.

NORWICH. YELL.: cancelled. BUFF (4): 1, Priestley, good-shaped nice-coloured bird in grand form; 2, Markham, rare shaped bird, capital head, but not in such good fettle; vhc, Ward; hc, Willmott. YORKS.: both cancelled, as was CANARY, A.O.V. MULES (8): 1, vhc, hc. Andrews, charming little Buff, ticked on eye, nice shape and style, good colour and as tight as wax; 2, Davies, rich coloured, well marked, shapely Linnet-Bullie; 3, Ward, nicely marked, well feathered Gold.-Bullfinch, very steady; res., Cocks, another good Linnet-Bullie. BRITISH GOLDFINCH (11): 1, Vincent, grand rich, deep-cut blaze, capital bars, lovely chest, good cheeks and back; 2, A Howe, another gem, but not quite so clear in cheeks, lovely body colour and bars; 3, vhc (2), Andrews, very smart blaze, rich colour, although not quite so tight in feather; res., Smeeton, very snaky in shape, grand colour and feathers, loses cheeks; hc, Cooper, Rouse. A.O.V. FINCH (12): 1, 2, R. J. Howe, noted Chaffinch and Bullfinch, both put down in the pink of condition; 3, res., A. Howe, Hawfinch and Bramblefinch, another charming pair, a wonderful quartet, which reflect the greatest credit upon their owners; vhc, Andrews, Hills; w.c. 667, Andrews, a Pied Goldfinch. A.O.V. (7): 1, 3, R. J. Howe, well-known Thrush in grand fettle, and a very rich-coloured, close-feathered Yellow Wagtail, a grand brace; 2, hc, Baldry, very sweet little Whitethroat, in grand colour and feather; res, Rouse; vhc, Ward; abs., 666, Smeeton. FOREIGN (8): 1, Davies, very gorgeous King Parrakeet, grandly marked and in rare feather; 2, vhc, Miss Bulteel, very fine Red Rump and Blue Mountain Lory, a charming pair of birds, of great merit; 3, R. J. Howe, very fine pair of Yellow Budgerigars, well marked and sound in colour; res, hc, Cooper; vhc, Andrews; hc, Judge.

CLUB REPORTS.

QUEEN'S PARK AND DIS. C.B.A.

Meeting May 16th. Mr. J. Robson gave his lecture, "The Breeding Room and its Occupants," which was closely followed and much appreciated by the members present. After the lecture the chairman declared the meeting open for discussion. Several interesting points were raised by Messrs. Bassett, Buckman, Lewis Monger, Rogers, and Stuckey, which Mr. Robson very ably answered, giving his reasons and making his meaning thoroughly clear. A hearty vote of thanks to the lecturer for the very pleasant and instructive evening brought the meeting to a close.

J. C. BIRCH, Hon. Sec.

WOLVERHAMPTON C.B.S.

Meeting May 14th. Table Show of British Finches and Mules, with a judging competition. Two good teams were staged by Mr. Weaver and Mr. Osborne, and most of the members present had a try to place the birds, which proved very interesting. Several very important matters of business were discussed. The famous Rule 17 came in for most comment, and after considering the matter from many standpoints, everyone agreed that without this rule it would be difficult to carry out the objects of the Union. As regards the novice question, it was thought that No. 1 definition was the best workable, and the meeting voted for that. Our chairman, Mr. F. J. Weaver, was appointed representative to C.B.U. One new member was elected. We feel sure there are many more fanciers in the district who would benefit by becoming members of the society. I should be glad to supply any applicant with copy of rules and other particulars.

F. HOWES, Hon. Sec.

25, Leslie-road, Wolverhampton.

GRIMSBY AND DIS. C.B.S.

Members did not turn up in such good numbers as usual. Correspondence from the C.B.U. was attended to. Mr. H. E. Stubbs, our chairman, was elected delegate to the C.B.U. After a short discussion No. 4 definition of a novice was chosen. A special committee was appointed to arrange classification for Open Show. Mr. Garthwaite gave us a very interesting demonstration in feeding young birds in the nest with his famous "Lifebelt." Mr. Garthwaite, after explaining the qualities of this food, brought out a nest of five youngsters a few days old. He then showed our members how to use his feeder, which we all thought unique and interesting. Several members then fed the birds, and I am sure they never had a better feed, although they all called for more. Committee meeting on Tuesday. Classification was arranged:—Norwich (open) 6 classes, Yorkshires 3, Crests and Crestbred 2, Cinamons 2, A.O.V. Canary 1, Mule and Hybrid 1, Selling Class 2, Gift Class 1, British 4, Foreign 2, Novice Norwich 2, Novice Yorkshire 1. Next month we have our First Feather Show, and Mr. D. Hope, of Hull, is expected down to adjudicate. I hope we shall have plenty of entries, and make a decent show. We must start by 7 prompt.

H. EMERSON, Hon. Sec.

THE STOCK BOOK: See Page 473.

HUCKNALL TORKARD C.B.S.

First Feather Show on May 18th, but through the very changeable weather the entries only numbered seven. Yell. Norwich: 1, Pepper; 2, Winterbottom. Buff: 1, Twine. Buff Ticked: 1, Winterbottom. Buff Crestbred: 1, Riley Bros.; 2, Faux.

A. A. ASTBURY, Sec.

CROOK AND DIS. C.B.S.

Meeting May 18th. A large attendance, and several new members added to the list. It was decided to hold Open Show on December 28th, and on Saturday, June 18th a Browney singing contest at Mr. T. Fowler's Loves Hotel. Mr. J. Horner, chairman, offers a special for the first, Mr. T. Cleminson will judge, and Mr. Bright act as timekeeper. Mr. J. J. Bright gave a capital address on "Canary Management and Rearing." He dealt first with cages, and advised giving them a coat of whitewash and alum, as alum is a preventive of inseets. Birds should be well supplied with grit, as this is beneficial in digesting food, and shelling eggs. Cuttlefish is another thing that must not be forgotten. Feeding utensils must be kept clean and sweet if you want to keep your stock healthy. Birds must not be fed on too rich a diet. During winter let plain Spanish canary seed be their staple diet, with a pinch of mixed seed now and again, also a piece of ripe apple, boiled carrot, or beetroot. A few grains of hemp seed will aid them in keeping warm, but it must be used with care. Feed up for pairing about the latter part of February by giving a little egg food, with a pinch of maw seed, once or twice a week. Put them a bath on if the weather is not extra cold. Do not be in a hurry in pairing. The first or second week in April is soon enough. As soon as you run your birds together supply them with nest pan and building material, and give a teaspoonful of egg food to each pair of birds. If all goes well, in about twelve or fourteen days after pairing there should be an egg in the nest pan, but take eggs out till the third egg is laid, and then give the hen a clean, newly-lined nest pan, not forgetting to dust it with insect powder. Put the eggs in the nest on the evening of the day she laid the third egg. The hen's diet while sitting should be canary seed only, and withhold the bath for the first seven days, then give it to her now and again if the weather be hot and dry. On the evening of the thirteenth day give the hen a little egg food with a pinch of maw seed, and add a little hemp and German rape to her canary seed. Increase the supply of hemp as the birds get older. When the young are four days old give the hen a little green food, say a young dandelion leaf or a spray of watereress, taking care it is not frosted. If the weather be hot, give the hen a bath, as it will encourage her to feed and rear her brood, as a bath puts new life into her. When the young are twenty-four days old they will be leaving the nest, but don't take the nest away the first time you see them out, as they generally go back a night or two to roost. When the young are taken away give them crushed hemp seed, and egg food same strength as the old birds, and give them cold tea instead of water to drink; as they get older weaken the tea. Never give birds green food after they can manage for themselves. Mr. J. Horner remarked that it was just the kind of address that made people take an interest in breeding birds, and hoped Mr. Bright would come and enlighten us with another address, as he was sure he had interested all those present. A hearty vote of thanks was accorded the lecturer.

Isometrical View Of Cage

ILLUSTRATED IDEAS

Under this heading we shall illustrate weekly some idea useful to the bird-keeper. Readers are invited to send us particulars of any novel and practical appliance of use in our hobby, either in cage, bird-room or aviary, with a rough sketch of same where possible. Every "Illustrated Idea" used in this column will entitle the sender thereof to a postal order for two shillings and sixpence.

No. 103.

A GOOD COMPOSITE CAGE.

Sent by George Peacock, 8, Park Road, Gravesend.

The cage above illustrated I have found very good for breeding purposes, and also as a store cage. It is very easily made and looks neat, yet is strong when finished. The sand-tray projecting about 2 in. in front of the cage collects all the husks and seeds thrown out by the birds, so keeping the room always neat and clean, and the seeds can be used again for the same birds, without the risk there is of carrying complaints to other birds when the seeds are allowed to fall on the floor from all the cages. I have shown all the woodwork cut out of boards of one thickness, which saves a lot of waste, as the cuttings off one piece can be used for other parts. The wood is yellow deal, and the thickness is ¼ in., which after being planed and glass-papered, is about 5-16th of an inch, which makes a nice, substantial cage. The loose fronts can be purchased from one of the numerous advertisers in CAGE BIRDS. It will pay you to give a good price for them, as some advertised at cutting prices are not worth the trouble of fixing, as they are not square and the wire is generally bent, so spoiling the appearance of the whole cage. The size required will be 18in. by 12 in. Give the cage, inside and out, two coats of sanitary distemper, first stopping all the nail holes, etc., with the distemper in a stiff paste. Allow the first coat to thoroughly dry before applying the second. If the cages are made all of one size, they can be piled one upon another, and when a dozen or so are stacked together, they look very neat and are always clean, as the seeds do not fall down the fronts. Any further information I will be pleased to give, if requested by any reader.—G. PEACOCK.

A HANDY BOOK FOR LOVERS OF BIRD LIFE.

BIRDS OF THE COUNTRYSIDE

By FRANK FINN, B.A.

In Cloth gilt, 5/- net.

With about 130 full-page and other illustrations and 12 full-page Coloured Plates

"No better or more interesting companion for a stroll in the spring and summer days could be chosen by those who wish to be on speaking acquaintance with the birds they may come across."—WESTMINSTER GAZETTE.

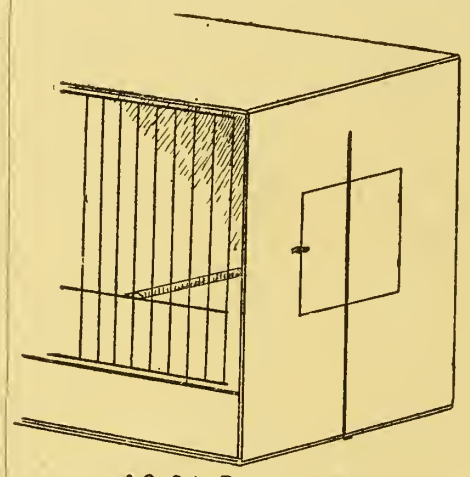
LONDON: HUTCHINSON & CO., PATERNOSTER ROW.

No. 104.

SAFETY DOOR FOR SHOW CAGES.

Sent by W. E. Warrington, 26, Abington Avenue, Northampton.

We have heard one or two complaints of birds being stolen out of their cages when at shows. I have sketched a device for a safety door, which it is impossible to open without the cage being lifted from off the bench. The illustration shows a pin, or short piece of wire, which passes right through the door, and so fastens it securely, the head (at the bottom) falling into a groove cut into the wood.—W. E. WARRINGTON.



A Safety-Door Device.

A Lancashire that could Win Without a Leg!

A well-known authority tells the following story of his experiences whilst officiating as judge at a popular local show in the County Palatine. It happened some twenty years ago, at a time when the classes at these local fixtures were well filled, and the competition was keen. Therefore a judge had to be prepared for a shoal of comment in the real Lancashire style, if his awards were in any way questionable. In judging the Lancashire classes, says he, I came across a bird, a real good one, but he had a claw off. Still, after going through the class, he stood so well in front of the others that I gave him first prize, knowing quite well I should have to "face the music" later in the day. After I had had dinner we adjourned to the room, where a goodly company was assembled. I had not long to wait. A voice chimed out: "Thar's a nice judge thar's put a gradely bird first," pouring forth a volume of choice Lancashire rhetoric, maintaining that a bird with a defect like that should not win, and that I was "no judge to judge birds like that." Knowing the exhibitor well, I said very coolly: "Now look here, you know that bird is a topper. Why, he is that much in front of anything in the class you can go and chop his leg off, and then he can win easily." This reply created loud laughter and proved sufficient to bring the experience to a close.

THE YOUNG NATURALIST.

Prizes of 1s. and two of 6d. each will be given for respectively the best and two second best cuttings or original bits about birds. Competitors must be children under sixteen years of age. All efforts must be briefly and clearly written, and ON ONE SIDE OF THE PAPER ONLY.

Two stars indicate the Winning Contribution; one Star the runners up.

Do the boys and girls ever wonder from whence it is that the birds get the beautiful colours which adorn their feathers? Some birds' feathers are certainly influenced by the food they eat. Canaries fed on bread and milk will be almost white, while those to which tasteless red pepper is given with their food during the moult will become a fine deep orange colour.

The red breast of the Bullfinch, too, will fade in captivity unless he is given the wild fruits and berries which contain the colouring matter he needs to keep him in perfect beauty.

It is the same wth. the Rosy Pastor and the American Flamingo, both of which birds lose their lovely tints of pink and scarlet unless they are given some harmless dye in place of their natural food.

But some birds, and among them those whose hues are more brilliant than any others—namely the Humming Birds—have no bright colouring matter in their feathers. Seen under the microscope they are but black or grey, and their flaming colours of red and green and blue and gold, shown as the tiny birds flash about in the sunshine, are, like the colours of the rainbow itself, due to the splitting up of the rays of light into its component parts by the miniature prisms formed by the very shape and structure of the feather.

* * The Order of the Bath.

Birds are very particular in the matter of toilets. Some use water only, others use dust and water, others dust only. Wild ducks feed by salt water, will only bathe in fresh water, and fly inland twenty or thirty miles in order to get a fresh water bath. Sparrows take two kinds of baths—water and dust. While they are not particular about the former, only the cleanest and dryest dust will serve for the latter. The Partridge takes a loam bath, scratching off the turf he loosens a square foot of rich, chocolate coloured loam, and bathes there in his sleek plumage. All Softbills love a bath of ashes. Any person walking over a piece of land which has been the scene of a prairie fire in miniature will notice every little while a disturbance in the charred ash heaps, and up, shaking off a fine cloud of ash dust, many birds will rise.—TOM HAMPTON (age 12), High-street, Cheslyn Hay, near Walsall.

* Tame Birds and Wild.

My uncle has got a lot of Yorkshires and Goldfinches, and he bred some Mules last year in an outdoor aviary. A cat came and frightened them, and one of the Mules broke its beak, but it has grown again now. I felt so sorry about it. I always feed the wild birds when there is snow on the ground, and it is so pretty to see them, all kinds feeding together, also the Starlings and Thrushes, which are plentiful in the garden. I saw two Tom-tits early in February feeding one another, and carrying stuff to make a nest. Very early to start nesting, is it not? I am very fond of reading CAGE BIRDS every week.—From OWEN GWYNNE (aged 10 years), Eland House, Llanelly.

* The Longtailed Tit.

A family party of Longtailed Tits is a fascinating sight with their soft, fluffy feathers, their little backs shining with a sort of roseate burnishing, greyish white caps and breasts, and long black tails edged with white. When seen methodically hunting along a hedge in a string, following one another in little short flights, they move with the ease and grace of tiny mice. Often they hang head downwards for a moment, managing their long tails with wonderful cleverness. It is the custom of these wee birds to remain together in their families through the winter, and I am told that at night they all cuddle together in one soft mass for warmth. One would like to surprise the family thus, but I greatly enjoy the fortunate sight of the happy little party on their daily excursion after food.—WILLIAM H. WINSTONE (aged 15), 2, Soundwell-rd., Staple Hill, Bristol.

The Linnet.

The Linnet is a very lively little bird, and a good songster. Its plumage is of a brown colour. If caught when young it becomes very tame, and can be taught several tricks. It is now becoming rather rare, on account of so many being caught every year, and it is fast gaining ground as a cage pet.—LLEWELYN ROBERTS (aged 15), Eirianfa, Conway.

SEND FOR

Cage Birds = Annual =

And you will be delighted beyond expression at the value received.

Never was the bird keeper better catered for in respect of birdy literature than he is to-day, and nowhere can you find a handier, more practical, or complete guide to the hobby of cage bird keeping than I offer in CAGE BIRDS ANNUAL.

Listen to this conversation between a beginner and our publisher:—

Publisher.—Take one of our ANNUALS, Sir?

Beginner.—Not I. What do I want with an annual? I've got the weekly.

Publisher.—Without disparaging the weekly, Sir, the ANNUAL is a totally different publication. The ANNUAL is a handy work of reference. You find its value right throughout the year. You never know when it may come in handy—save a bird's life or give you exactly the item you want to know.

Beginner.—Will it tell me if there's a club in my district?

Publisher.—Yes. Here is a complete list of clubs, the names and addresses of the secretaries, fees, etc.

Beginner.—Yes; that's all right, but if there's something I can't understand—some technical term, for instance, will it explain that?

Publisher.—That's just where its value comes in. See the Glossary of Fanciers' Terms.

Beginner.—By George, that's handy! Will it also tell me how to breed Canaries?

Publisher.—Certainly! And also how to breed Mules and Hybrids. There is also a chapter on keeping a pet bird, and a most useful article by Mr. Sam Drake on "Rearing Young Canaries."

Beginner.—I think I'll take a copy. Stay, though, I'm not only going in for Canaries; I may take up foreign birds.

Publisher.—Then you ought to read Wesley T. Page's chapter on "Some Pleasing and Beautiful Foreigners."

Beginner.—But suppose any of my birds become ill. Where shall I find this ANNUAL come in then?

Publisher.—Just where you want it, Sir. The chapter on diseases is arranged in alphabetical order, and is most comprehensive in character.

Beginner.—It certainly seems a valuable idea.

Publisher.—Valuable! It's worth its weight in gold. Why look here, Sir, in addition there's a chapter on "How to Identify the Call Notes and Song of British Birds," a review of the exhibition year, a breeding register, a show record, a cash account, a list of cage bird judges' names and addresses, a list of the bird trade, a list of breeders and exhibitors——

Beginner.—Stop! stop! man; give me a dozen copies. I'll take them away and distribute them to friends as a public duty. However it's done for the price I can't see. Look here, pack up every blessed book you publish, and let me know how much you want from me.

Publisher.—Thank you, Sir; always ready to oblige. You see, we publish our ANNUAL as an advertisement.

F. CARL,

154, Fleet St., London.

All the Mice Exterminated.

Before now it has been our pleasure to refer to the wonderful effects of Danysz Virus in ridding bird rooms and aviaries of rats and mice, and amongst a recent batch of testimonials which the makers have received are many from bird lovers. The following extract is from a letter received from Mr. J. C. Barnes:—"The Virus has been very satisfactory. I was seriously troubled with mice in my two aviaries, and poison and traps were of no avail. The effect of the bread soaked in the Virus was exactly as described in your circular. In a few days we saw some of the little pests crawling about, and such were readily killed; whilst others were found dead. I am now clear, and shall not hesitate for one moment to use the Virus again at the first sign of return of mice, and I recommend its use to others who, like myself, are bird lovers and bird keepers."

IMPORTANT NEWS TO BREEDERS

and FLYERS OF PIGEONS and POULTRY, AVIARY KEEPERS and DOG FANCIERS.

All Breeders and Flyers should know that Hall's Sanitary Distemper is the best thing known for ensuring perfect cleanliness in breeding and store cages, show pens, fowl houses, kennels, etc.

It is sold in tins ready to mix with water and is applied with a whitewash brush.

One coating effectually destroys all the insect life and fever germs, etc., which collect in cages and kennels.

At the same time Hall's Distemper is non-poisonous to bird and animal life.

It is made in two qualities: the outside quality is the one specially recommended for the above use, and suitable colours are—

No. 17, Cream. No. 66, Pale Green. No. 47, Pale Blue.

HALL'S DISTEMPER is sold by all Oil and Colourmen, Stores, etc.

Remember to ask for Outside Quality.

Sole Manufacturers—

SISSONS BROS. & Co., Ltd., HULL; 199b, Boro' High St., London, S.E.

Full particulars with sample and shade card will be sent post free on application.

Some Members and Friends at the Dulwich C.B.S. Annual Outing.

DULWICH AND PECKHAM C.B.S.

A Delightful Country Ramble.

It was a very happy inspiration when Mr. E. S. Lugg conceived the idea of a ramble for the members and friends of the Dulwich and Peckham C.B.S., with a view of seeing—

"The feathered throng
Who pay their quitrents with a song."
(Green.)

The proposal was no sooner placed before the Executive than it assumed concrete form, and the excursion was duly carried out on Sunday, May 12th. The party, which numbered 33, chaperoned by Mr. Lugg, left New Cross in a special saloon attached to the 9.25 train, the destination being Dartford. The company included Mr. J. Robson, Mr. George (from India), Mr. Gain ("News of the World"), Mr. W. Goodwin (proprietor Herne Hotel, Peckham Rye), Mr. G. F. Woolhouse, Mr. A. E. Rogers, Mr. J. B. Waterman (Press Association), Mr. F. J. Waterman, junr., Mr. A. Rees, Mr. W. Rees, Mr. C. Venier, Mr. W. R. Wall, Mr. J. R. Wall, Mr. C. Botting, Mr. A. Austers, Mr. Allan Cunningham, Mr. Allan Cunningham, junr. (of the Royal Navy), Mr. G. J. Warley, Mr. Silverthorn, Mr. E. A. Deaxter, Mr. W. Cook, Mr. W. J. Cranfield, Mr. L. J. Richardson, Mr. Doughty, Mr. Bains and Mr. Alderman. The amateur photographic section (all fanciers, of course) was represented by Mr. W. Hodson (hon. sec. of the D. and P. C.B.S), Mr. W. Lovsey, Mr. S. J. Kent, Mr. W. Brooks, Mr. J. Johnson, and Mr. J. Sullivan. Dartford was reached at 10.10. Full advantage was at once taken of the bona-fide clause of the Licensing Act (which many averred was one of the most beneficent pieces of legislation ever carried out) at a neighbouring hostelry, and after a stop of a quarter of an hour a start was made for Stone, a picturesque little Kentish village nestling down by the river Darenth, some seven miles distant. Dartford is a quaint old place, and it was here that the insurrection headed by Wat Tyler, in the reign of Richard II., began. The weather was charmingly fine, the sun shining forth with July-like fervour from a sky of azure blue, while a refreshing westerly breeze, laden with the rich fragrance of flowers, swept across the country. The route lay across strawberry plantations, orchards, hop gardens and cornfields, and, judging by the great wealth of bloom that everywhere met the eye, the forthcoming fruit season bids fair to be an exceedingly good one.

As the party proceeded, Skylarks were seen here and there rising from adjacent fields, and presently the Heavens would be filled with their rapturous song, continued until they became mere specks on the horizon. Then the woods would reverberate with the majestic melody of the Blackbird and Thrush, and later the mournful echo of the Cuckoo's notes would be heard ringing through the stately elms. Then a Bullie, looking gorgeous in all the glory of his spring plumage, would be espied singing his peculiarly buzzing notes to his mate, who was cosily brooding her eggs in a sheltered spot close by, and his song seemed quite funereal when compared with the shrill and cheerful "pink, pink" of the sprightly Chaffinch or the sweet melody of the Linnet.

"Sweet is the breath of morn, her rising sweet
With charms of earliest birds."

So wrote Milton, and only the pen of that sublime poet could do full justice to the enchanting scene now before us. Some of the party would have liked to have seen a few more birds, especially of the Wren, Wryneck, Wagtail, Tits, Meadow Pipit, and the Lapwing species; but, although this pleasure was denied them, ample amends were made by the captivating beauty of the rural scenery. Towards one o'clock the sun had gained great power, and some of the ramblers looked with envious eyes upon our friend from India, who was not in the least perturbed by the glass standing at 100 deg. Fahr., he being used to the high temperature of the land of the Rajahs.

Presently a cheer was raised by the irrepressible Mr. Barnes (who would have it that there were more than 1,760 yards in a Kentish mile—that is, on a hot day!) when our chaperon, pointing to a white cottage in the distance, said, "That's where we bivouac, gentlemen." Our tryst was reached at 2.30, and, after much-needed ablutions had been performed, the party sat down and did full justice to the very excellent cold luncheon provided by our hostess, Mrs. Ruskin, the repast being taken in truly rural simplicity, which was the very spice of its enjoyment. The village of Stone is chiefly agricultural. The church is a very ancient one, and contains effigies of Willshyre, of Stone Castle, bearing date 1526. The Castle is of great antiquity, and belonged to Sir John de Northwood in the reign of Edward III. After the inner man had been refreshed the travellers, headed by Mr. Ruskin, proceeded into Darenth Woods, and many interesting things in bird life were met with, much to the delight of the wielders of the camera. Peeps were had at nests of eggs of the Robin, Blackbird, Thrush, Linnet and Greenfinch; whilst a splendidly-constructed Chaffinch nest in the fork of a tree proved a veritable gold mine to our snap-shotters. Mr. Barnes and Mr. Rogers kept the party in roars of laughter by their quaint mannerisms. One rambler solemnly averred he had been caught in a man-trap, but when it afterwards transpired the instrument in question was not "set" at the time, and that, therefore, he could not for once have "put his foot in it," his breezy stories were for the rest of the day received cum grano salis. Arriving back at the cottage at 5 o'clock, the party were photographed in various groups, after which full justice was done to the "cup that cheers, but does not inebriate," and the other good things provided by Mrs. Ruskin. A move was then made to the lawn at the back of the cottage, where Mr. Goodwin, the treasurer, in a few appropriate remarks, formally presented Mr. A. Cunningham with his badge of office on his election on the committee, and after the recipient had suitably replied the ramblers, at 6.15, made a start for home. Some insisted upon bringing away with them in small boxes braces of young ducks, of which our worthy host had quite a colony, and the rollicking fun caused by the persistent plaintive "quack, quacks" of these little birds en route can be more easily imagined than described. Dartford was reached at 8 o'clock, and the party at once entrained in the special saloon. The home-coming was devoted entirely to speech-making. Mr. Hodson moved, and Mr. Woolhouse (the chairman) seconded, a hearty vote of thanks to Mr. Lugg for the very able manner in which he had conducted the outing; and Mr. Lugg having replied in a neat speech, Mr. Goodwin expressed the hope that another ramble would be organised, even on more ambitious lines than the present one, and suggested as the rendezvous one of the South-western shires. His idea appeared to meet with general approval. Mr. Gain proposed "The Press," and in the course of an eloquent speech Mr. J. Robson expatiated on the great good these outings wrought from the health point of view. He paid a high compliment to the management upon the successful manner in which the excursion had been engineered, and expressed the hope he would have the pleasure of accompanying the party upon many another occasion.

At 8.35 the train steamed into New Cross, to the sounds of "For he's a jolly good fellow," sung in honour of Mr. Lugg, who had been most indefatigable in his endeavours to secure the comfort of everybody, and he greatly appreciated the musical tribute paid him. The party separated, each expressing the earnest hope he would live to participate in many similar gatherings; and thus Dulwich's first country ramble proved an unqualified success from every point of view.

HAVE YOU SEEN "THE STOCK BOOK"?
It will surprise and please you.

GUARANTEED CLASSES AT THE CRYSTAL PALACE SHOW.

Sir,—Regarding the prize money in the open Crested classes, while I must appreciate the kind sentiments in your letter, I would much rather not have received any more prizé money, as I had already received all I was justly entitled to, viz., full prizo money in the Crestbred cocks which was a full class, and half prize money in two Crest classes that did not fill.

H. Horton.

Blackheath.

Sir,—Although an exhibitor of no repute in Cage Bird circles, but as one who has suffered in an instance almost identical to that affecting Mr. Wright, I heartily endorse his action in the stand he is now making for the cause of exhibitors. In view of your editorial footnote re special prize at Cheltenham Show, February 2nd issue, you say that "the Courts have ruled that committees are responsible for all special prizes offered in their schedules, whether purporting to come from donors or not." Is it to be understood that the executive of the L. and P.O.S. are to put whatever interpretation they like on a special prize they may receive? In your report of the preparations for the Palace Show you guarantee the entire Scotch Fancy section, as also the Champion Crests, which I am sure is plain enough for any show secretary to understand, and the generous spirit which prompted you to stand for these sections cannot be flattered by the returning of the extra prize by some, apparently as an act of charity. Is our premier society going to make a precedent for smaller bodies to follow? Are they going to regard the exhibitor merely as the tool whereby they can get a large entry and secure a successful gate? Too long this has been the rule in some of the less responsible societies, and it will be a bad day for exhibitors when they can point to the L. and P.O.S. as the example they have followed. I am quite a stranger to Mr. Wright, but am sure that in saying his friend's remarks as to his calling are both impolitic and impolite I am only voicing what is the opinion of all honest-minded fanciers. Whether Mr. Wright earns his living as an insurance agent or as a seavenger is nothing to do with the case in point, but I think an income thus derived, no matter how precarious, stands out in bright relief as compared with an income of £15,000 per week derived from the work of others.

G. S. McCreath.

[The sentiments expressed by the foregoing correspondent do him credit, but, unfortunately for his arguments, they are based on an entire misconception of the facts. Our prize money was not offered in any schedule, consequently no exhibitor made any entries upon the strength of it—it was only when the classes were going to have the pen put through them that our offer was made. In fact our offer to guarantee the prize money in the first instance was an "act of grace," and Mr. Wright accepted the half of the prize money so offered. When tendered the other half of the prize money by us in exactly the same way he magniloquently declines it (using bad Latin to do so) as "an act of grace," demanding it as his "legal right." What logic or common sense is there in that? No, no Mr. McCreath, Mr. E. G. Wright does not want fair play from us and without abusing him or having any animosity towards him, we can still express surprise that he should be content to play the jackal to somebody else's lion. —Editor C.B.]

Sir,—I commenced a letter to you ten days ago re prize money at the late Palace Show, but was called away on a very important case, hence the delay which I hope you will please excuse. I can assure you that I never for one moment expected full prize money, and I consider you have acted more than generously in paying same. I wish there were more like you, then we should not have had all Lancashire and Lizard classes cancelled at the Palace Show, 1906, and it's a pity, in my opinion, that when anyone comes forward to do a good turn someone should push themselves forward and try to bite the hand that feeds them.

F. J. Green.

Redhill.

Sir,—Will you kindly let me have a small space in your next issue to contradict statements made by one of your correspondents in last Friday's Cage Birds? He says that Mr. Wright tried to convert me to his way of thinking, and that I was recommended to return cheque. Both statements are quite wrong and without the slightest foundation. I really cannot understand how anyone could say such a thing about me. Fancy having to be recommended to do what was only right! Thanking you in anticipation and with best wishes for a continuation of your merited success,

Wm. Cairns.

Sir,—With reference to my personal letter to you from which you have taken an extract referring to Mr. E. G. Wright will you kindly put in a few lines to say that Mr. Cairns did not require anyone to recommend him to do what he felt was his duty as soon as he received, viz., to return cheque, as he did not consider he was in any way entitled to it?

Auld Reekie.

NO RATS SEEN since using Danysz Virus six months ago; see testimonials; Single tubes, 2s. 6d.; three tubes, 5s. Post free from DANYSZ VIRUS, Ltd., Box 74, 52, Leadenhall-street, London, E.C. Harmless to other animals. No inconvenience from dead rats.

SHOW ADVERTISEMENTS
(TARIFF ON APPLICATION).

GT. HORTON **O.S. Annual Show of Canaries** in their First Feather and British Birds will be held on **Saturday, June 8th,** in the Congregational Hall, Gt. Horton. —Schedules from Samuel Dean, sec., 24, Crossley Street, Gt. Horton.

Royal Cornwall Agricultural Association.

LISKEARD Exhibition, LOCAL SHOWS,
June 12th & 13th, 1907.
About **£300** Money Prizes and a large number of Specials for Horticulture, Dogs, **Poultry** (Two Guineas for Best Bird in this section), **Pigeons,** Cage Birds, Rabbits, and Cavies.
ENTRIES CLOSE MAY 28th.
Send for Schedules to Wm. May and R. Arthur Peter, Hon. Secs.

Your Breeding Register is splendidly got up, and, in my opinion, indispensable in every bird room. No one who keeps a record of his birds' doings can afford to be without it. I am sorry to say that so far the breeding season has been extremely poor in this district.—Geo. W. Read, Hon. Sec. Weston-super-Mare P.P.C.B.A.

The last issue of the "Bird World Magazine" is A1.—Miss R. Steel (Liverpool.)

Mr. J. Perry has removed to the Aviaries and Seed Stores, 98, Attercliffe-common, Sheffield.

The judges at Dysart on October 26th will be Messrs. J. Hogg, J. Maclay and J. Goodfellow.

I had so many applications from my advertisement in Cage Birds that I could not reply to all individually.—Wm. Raper (York).

Please thank all applicants for birds advertised in Cage Birds. They are far too numerous for me to do so.—N. Johnson, Bolton, Wigton.

A meeting of cage bird fanciers will take place at the Odd Fellows' Hotel, Maesteg, on Wednesday, May 29th, at 8 p.m., when all interested in cage birds are invited to attend.—Thomas Miles.

We have decided to remove our headquarters from the Plough and Arrow to the Coffee Tavern, and shall be pleased to see all those wishing to become members at our next meeting on June 1st.—A. A. Astbury, Sec. Hucknall Torkard C.B.S.

I should like to see aviaries in our London Parks, writes Mr. J. Kay (Charlton). Greenwich being the Royal Park ought certainly to have one. The Park at Warringon has a large one, besides a fine apiary for fish; and Darwen Park has an aviary.

Fanciers should not overlook the annual "ramble" of the National British Bird and Mule Club, which takes place to-day (Saturday, May 25th), the venue being Epping Forest, and the trains leaving Liverpool-st. Station at 9.33 a.m. and 1.3 p.m. for Loughton.

J. T. Blatch (Leyton) writes:—I received your book, "Canary Breeding for Beginners," yesterday, 30th inst., and have the pleasure of saying it contains all I wanted to know about breeding and rearing young Canaries. It is a very useful book, and I can strongly recommend it to all those who go in for Canary breeding, etc.

The Ashington and Hurst C.B.S. wish to express their regret in losing an active member in the person of Mr. John Smith, who is emigrating to New South Wales. He took a keen interest in Norwich, and was a fairly successful breeder and exhibitor. We all wish him God-speed and success in the new country.—J. Miles, Hon. Sec.

Our First Feather Show on July 13th will be judged by Mr. A. Wake. Mr. W. Mundell will judge Canaries and Mr. F. Marwood British Birds at our open show on October 26th. Mr. G. Harker has given the Society a splendid silver rose bowl, value £6 6s., to be competed for at this show.—Arthur Wake, Sec. Middlesbro' C.B.S.

The patronage of the C.M.Y.C. has been granted to the Gt. Horton and Bfd. West First Feather Show. The specials are for novices, best fourth and best vhc in Cin. marked classes. Subscriptions for this year now due. None but paid-up members can compete for club's specials.—R. Garnett, Hon. Sec., 17, Woodville Terrace, Windhill, Shipley.

From the report and balance-sheet of the Macclesfield C.B.S. we gather that the past year was most successful, there being a record entry at the annual show and a great improvement in the quality of the birds. After all liabilities have been defrayed there is a balance in hand of £10 11s. 6d. The secretary is Mr. F. Broadhurst, 36, Burton Street, Macclesfield.

Lovers of Yorkshire Canaries will hear with regret of the serious illness of Mr. D. Mallinson, who is suffering from heart disease and dropsy, and for the last three weeks has been unable to lie down or take any rest. We are sure all who have the pleasure of Mr. Mallinson's acquaintance will join with us in wishing him alleviation of his suffering, and restoration to health.

Those who lose young Canaries just as they commence picking alone should try Mr. Palmer's Tussiline. A few drops in the drinking water, and fed according to his instructions, will save them. Having had 20 years' experience in Canary breeding, he should know something about them. Tussiline is sold in bottles, 7d., 1s. and 2s., by Mr. Palmer, chemist, Gamlingay. —Advt.

Valuable prizes have been accepted by the Yorkshire Canary Club for competition by members feeding their birds on Ramsden's Pure Peppers. Prizes have also been offered to the Norwich Plainhead Club, Southern Norwich Club, and Southern Yorkshire Club. Ramsden's Peppers are undoubtedly the finest on the market, and are guaranteed absolutely pure.—Advt.

Lancashire fanciers should not miss the lecture on the Lancashire Canary, which is to be given by Councillor S. R. Compston, Cage Birds' expert on the Lancashire Canary, at the L. and L.F.A. meeting at Glossop on June 2nd; time, 2.45 p.m. Don't forget excursions from Manchester and Oldham on that date, 6d. return. Other very important business to be dealt with. Fanciers and friends cordially invited.—H. Oliver, Sec.

Mr. Simpson Bingham has removed to 3, Meadow Bank-crescent, Edinburgh.

Wigan Show is to be held on December 6th and 7th. Mr. J. Trengove will judge.

Breeding Register is a useful and well-contrived work.—H. Oliver, Sec. L. and L.F.A.

Mr. J. E. Hudson, 75, New Hey-road, Bowling, Bradford, has been elected secretary of the East Bowling B.F.A.

Am delighted with "C.B." Other such papers I compare as very weakly chickens in comparison with "C.B."—Walter Lycett, Apedale-view, Chesterton, Staffs.

Accept my very best thanks for doing me the honour of putting my Lancashire Coppy in Cage Birds, also the kindly notes on the same. —F. J. Green, Redhill.

I am pleased to say that our society is going ahead, and we have made thirteen new members during the last three months.—F. Broadhurst, Hon. Sec. Macclesfield C.B.S.

The Greenwich and Deptford C.B.S. have decided to meet on the second Thursday in each month instead of the first, as we feel it detrimental to the interest of both Greenwich and Deptford and the Dulwich and Peckham to allow the meeting nights to clash. From reports to hand, I believe your Novice Breeding Competition is being taken up by a large number in this neighbourhood.—Geo. Hill, Hon. Sec.

OBITUARY.

C. BAKER, Junr.

It is with feelings of greatest sympathy and regret that we chronicle the sad death of the son of Mr. C. Baker, the well-known bird dealer of Bedminster. Whilst engaged on Sunday morning, April 28th, in preparing a cup of tea for his parents, his clothes caught fire. He was severely burned, and lingered in great pain until May 12th. The lad was a particularly bright and intelligent little fellow, and was quite the apple of his father's eye. He was a keen fancier, and for the last three years has managed a loft of racing Pigeons himself, and has bred and reared many winners. He also took a wonderful interest in wild bird life, and was especially fond of studying the habits and doings of the migrants. His death is a sad blow to his parents, and to them we tender our deepest sympathy in their severe bereavement.

The London and Provincial O.S. mustered in very fair numbers last week to hear Mr. Allen Silver, of British bird celebrity, read a paper on his pet hobby. Some most instructive and interesting observations were made by Mr. Silver, and a lively debate ensued with profit to all present. The discussion touched on the vexed question of colour feeding British birds—British Bird Club standards—feather production, etc., and Mr. Silver handled his subject in a masterly manner.

Judging from the annual report and balance sheet for 1906-7 just to hand the National British Bird and Mule Club would seem to be in a very satisfactory position, and progressing strongly. Much of the credit of this has to be laid at the door of the painstaking and enthusiastic Hon. Secretaries, Messrs. Plumbridge and Carr, of 2, Broad-st. Station, London, E.C., who will be pleased to hear from any lovers of our native birds who would like to join the Club, and so further the objects for which it was instituted.

Green Canary Association Cups.

A meeting in connection with the G.C.A. subscription cups will be held at the Oldham Hall, Oldham Street, Liverpool, on Thursday, May 30th. at 8 p.m., when G. R. Johnson, Esq. (President) will take the chair. Will all who have promised subscriptions kindly attend, as there will be designs of cups, etc., on view? Can we also appeal to anyone interested in the Green Canary for a small subscription towards the above? It is our intention to provide four cups—viz., Champion Yorkshire cup, Champion Norwich cup, Novice Yorkshire cup, Novice Norwich cup.—T. Wilson and J. W. Metcalfe, Secs. pro tem., 12, Brythen Street, Liverpool.

Birds and Maids.

The annual ramble and nesting expedition of the Great Harwood and District C.B.S. took place on May 12th. About 20 members and friends started from headquarters at eight in the morning, and proceeded by way of Stonyhouse Nook, Bonney Inn, Ribchester Bridge, to Hirst Green, where an excellent dinner was partaken of. Afterwards the ramblers struck off by Hacking Boat, Chew Mill, and Billington, and home was reached about 6.30 p.m. Numerous nests with young and eggs were found, including Thrush, Blackbird, Peewit, Pheasant, Lesser Whitethroat, Robin, etc. A few of the younger ramblers were interested part of the route in another way, having found a few pretty maids to ramble with. Another ramble will take place in June, and any fancier or friend wishing to join us will be made welcome.—F. Sharples, Sec.

JUDGES OF CAGE BIRDS.

The attention of Show Secretaries is directed to the following list of gentlemen willing to act as Judges. Terms for insertion on application.

H. W. AXE, 55, Market Place, Doncaster. Judge of Canaries and other Cage Birds. Practical experience (Norwich and ritish speciality).
W. O BARLOW, The Aviaries, Malpas, Cheshire. Judge of Canaries, British Birds and Mules. Terms moderate
J. C. BARNES, 149, Duncombe Street, Walkley, Sheffield. Judge of Canaries and Cage Birds. Long practical experience. Terms moderate.
W. P. BARNES, Judge of Canaries and Cage Birds. Life practical experience. Breeder and exhibitor. Reporter for Fancy Press. Commercial Road, Grantham.
GEO. BENNETT, 46, Wenlock Street, Luton, Beds. Judge of Canaries and Cage Birds. Thirty years' experience. Terms moderate.
J. BERTIE, 7, Mitchell-st., Nottingham, Judge of Canaries and Cage Birds; all classes; 30 years' practical experience.
W. A. COWGILL, 115, Washington Street, Girlington, Bradford. Judge of Canaries and Cage Birds. Over twenty years' experience. Terms moderate.
A. G. DAVIS, Judge of all Classes of Cage Birds. Long practical experience. Terms moderate. 110, Tib Street, Manchester.
T. DIXON, Pioneer Terrace, Bedlington Station Northumberland. Judge of Canaries and Cage Birds. Life experience.
J. DOBSON, 14, East Road, London, N. Judge of Canaries and Cage Birds.
J. W. DRIVER, (Adnitt & Driver), Gladstone Street, South Normanton, Alfreton. Judge of Cage Birds.
GEO. GARDNER, 11, Haverstock Road, London, N.W. Judge of all kinds of Cage Birds.
C. A. HOUSE, 82, Upper Walthamstow Road, Walthamstow. Judge of Canaries, Mules, British and Foreign Birds.
E. A. LOVELL, 19, Islington Road, Southville, Bristol. Judge of Cage Birds (all varieties). Life experience.
F. MARWOOD, 1, Barnard Street, Thornaby-on-Tees, Mules, British and Foreign, a Speciality. 17 years exhibitor. Terms moderate.
W. R. MILES, The Aviaries, Chichester, Judge of Canaries and Cage Birds. Life experience.
W. MUNDELL, 6, Carlisle Place, Bradford. Judge of Canaries and Cage Birds.
J. NORTH, 435, Oxford Road, Reading. Canaries, British and Foreign Birds. Author of "The Common Sense of Canary Rearing."
J. PATTERSON, Chirnside. Judge of Cage Birds All varieties. Wide practical experience. Specialist Border Fancy Judge.
J. H. PAYNE, 17, Northgate Street, Gloucester. Judge of Canaries, British and Foreign Cage Birds.
PARKER ROBINSON, N.B.B. & M. Club, 1, Back Hartington Street South, Barrow-in-Furness. Cage Birds, all Varieties.
J. H. ROE, 167, Clarence Rd., Derby. Judge of Canaries and Cage Birds. Twenty years' practical experience.
WILLIAM J. ROSS, 19, Haulgh Road, Inverness, N.B. Judge of Pigeons, Canaries and Cage Birds. All varieties. Life experience.
C. E. SILK, The Aviaries, Emsworth, Hants. Judge of Canaries and all Cage Birds. Life experience.
HENRY TAMS, Orchard Place, Longton, Staffs. Judge of Canaries, British and Foreign Birds. Twenty-five years Breeder and Exhibitor.
R. B. TOPE, Hoe Street, Plymouth. Judge of Cage Birds, Rabbits, Cats, and Cavies. Twenty-five years' experience.
J. WILCOCK, 14, Chapel Street, Eccleshill, near Bradford, Yorkshire. Judge of Canaries and Cage Birds. 25 years Breeder and Exhibitor leading shows.
J. C. WILMOT, 17, Sandhurst Road, Bedford. Judge of Canaries & British Birds. Thirty years' experience.

OUR CANARY BREEDING COMPETITION.

Great Inrush of Novices.

T. Bishop (Sheffield Cage Bird Society) writes:—I have had several enquiries re competition already, and think good will result from it.

Sir,—I have found that the Breeding Competition is a great benefit to our society, we have four or five new members to join at next meeting. Your Breeding Register is a splendid book, and the information it contains is extra good.—J. T. Carrick, Hon. Sec. Jarrow C.B.S.

H. Foden, Secretary Ashton-under-Lyne O.S., writes:—I am glad to say that we enrolled four new novice members at our meeting held May 18th. This speaks well for Cage Birds Breeding Competition, as the above members came for particulars and forms for the Competition.

What shall I do as to time for getting the form filled up? I have been told it was not until August the 21st, when the birds had to be on the perches. It says in Cage Birds entry forms to be sent in May 27th. One of the Cage Bird Club members told me that I could not enter the competition because I was not also a member. Can I or can I not?—W. H. Baker.

Our correspondent is confusing the two schemes—the Breeding Competition and the "Tell Six" plan. The nomination (not "entry") forms in the latter have to be sent in by May 27th. The breeding competition (in which alone, presumably, our correspondent is interested) does not close until August 17th, vide rules. Anyone is eligible to enter this competition, whether members of a cage bird club or not.—Editor.

I never had a fancy for bird keeping until I had a present made of a cock Canary bird, and thinking he would be lonely with himself I bought a mate for him, not caring whether they bred or not. I have always had a feeling against birds in cages, and thought it a shame to keep them in prison, so I have taken a great interest in them. I have three young birds, seven weeks old. Hen only laid three eggs. Hen now sitting on four eggs. Have made my own cages, and got all information from Cage Birds, which I have taken since last February. I think it a very valuable paper for novices. Will you advise me about some person to see my birds right?—A. Hodgson, 11, Waerth-street, Leeds.

[Will the secretary of Leeds C.B.S. kindly communicate with Mr. Hodgson?]

THE CAGE BIRD UNION.

The Question of the Hour.

SIR,—At our last meeting held May 8th a letter was read from Mr. Lythgoe, Secretary of the Cage Bird Union, the first part of which deals with a resolution carried at the delegates' meeting held at the Crystal Palace, February 16th, 1907, re Rule 17. From your report (CAGE BIRDS, February 23rd) I learn that "On the vote being taken Mr. Bradshaw's motion was carried, and it was further agreed to submit the altered Rule 17 to the various affiliated clubs for their opinion upon it." Mr. Lythgoe in his letter says: "I also enclose you a voting paper for your Society's vote as to whether the latter part of Rule 17 shall be deleted." I should be glad if you will say whether your report is correct. If so I think Mr. Lythgoe is overstepping the line, in fact, if your readers will refer to the letter, I think the majority of them will agree that he is. Of course I can quite understand why Mr. Lythgoe and his Council are doing their best to keep Rule 17 alive, seeing they were present when this famous Rule was hatched. In his letter Mr. Lythgoe also gives his Council's opinion regarding this Rule—which I am sure is very much out of place. All the affiliated societies are getting tired; they have had enough discussion of Rule 17 without having the old arguments brought up again. What are our delegates fit for if this Council is to be allowed to thwart their purposes by appealing to all members of the Union through Mr. Lythgoe. I should like to know what the duties of our delegates are? Has the Council power to veto the decisions arrived at by our representatives? The whole of the letter indicates that the only brains connected with the Canary World lie in or near Manchester. I should like to advise Mr. Lythgoe and his Council to take the reins over altogether, stop this farce, govern all the affiliated societies with firm hands, force Rule 17 whether it is wanted or not, or be satisfied with the decisions arrived at by the delegates, who attend the meetings on behalf of their societies. I believe the Union from its birth is a farce. As far as I know the Council is self-appointed, the rules were made before any society was asked to send a delegate, everything was cut and dried, and this Council expects that all societies are prepared to accept their ruling without objecting to them.

J. W. VERNON.

Inveravon, Altrincham.

SIR,—Mr. Tyson writes on the injustice of voting on this question being by the elected delegates only. The injustice is quite imaginary on Mr. Tyson's part. The delegates are not asked to vote, the circulars being addressed to the secretaries of societies, not to the delegates, and distinctly ask for the society's vote, with a request to call a meeting to discuss the matter. Your correspondents, Messrs. Ogilvie Stevenson and Taylor, are in some doubt as to the payment of delegates' expenses. It was announced after the Council meeting held at Nottingham that the railways fares of delegates attending meetings or shows on Union business would be paid if applied for if the distance was over five miles.

GEO. W. F. LYTHGOE.

P.S.—To meet the wishes of a few societies who hold monthly meetings only the date for sending in voting papers on Rule 17 is extended to June 8th. Will other societies kindly send their papers in at once?—G.W.L.

A special general meeting of the City of Birmingham C.B.S. was held at the club room on the 15th inst. to consider proposed alteration of rule 17 of the C.B.U. I regret to say that out of 56 members warned, only 10, including myself, turned up. A letter was received from the President expressing his regret at being unable to attend, and stating that, in his opinion, it was desirable in the best interests of the Union that rule 17 should stand as at present. The rule in question was fully discussed by the members present. When the vote was taken, four voted for the rule to stand as now and four for the latter portion to be deleted, the chairman giving his vote in favour of the rule standing as at present. The society has, therefore, recorded its vote against the proposed alteration.

H. C. WILKINS, Hon. Sec.

SIR,—Mr. Tyson wishes to point out the injustice of voting by elected delegates only. There seems to me to be something misleading in this. I am under the impression that all members are asked, through their respective societies, to vote, at any rate it was laid before our last meeting and a vote taken on it. Mr. Tyson is calling a meeting of the L.C.B.A. to discuss Rule 17, also definition of a novice. I presume they intend coming to some decision on the matter, and voting on it. I don't think the delegates have the power of voting on any matter of importance, and certainly not on the making or altering of rules without first obtaining the opinion of their particular society, and I should think all delegates drop their private opinions and vote on instructions received from societies. I mean only important business. I quite understand matters will crop up on which they will have to use their own judgment. The question of a delegate having one or more votes was thoroughly thrashed out at the first meeting called to discuss the formation of the Union, and I should say it is open to any society to forward, at the proper time, through their own delegate any resolution they care to pass that they think will be of benefit to the Union in regard to altering or adding new rules. Mr. Tyson feels insulted that the Executive Council should issue instructions on Rule 17. Surely it is not unreasonable for any society or union who have been attacked for doing a certain thing to give their reasons, and, if possible, justify themselves for so doing? Let me take Mr. Tyson back to the meeting at Manchester. He attended full of enthusiasm, and had thought of nothing else all the way from London, and arrived at Manchester with his pockets bulging with notes about the good things the Union, if formed, was going to accomplish. How we were going to make the railway companies give us a little more respect, how we were to get cheaper tickets, cheaper carriage and better attention to our birds; how, in fact, everything in the garden was to be lovely. He had so many notes he could not give them all to the meeting in the time at his disposal, and left part of them with a Press representative. Are all these things more difficult to obtain now than they were twelve months ago? It is certain if fanciers keep on picking little bits out with which they don't agree, and like school children say "I shan't play," the Union won't do much good. No matter how perfect we get the rules there will be something someone will not agree with, but if they are fanciers they will work and try to get it altered, not by showing their superior intelligence in the Fancy Press, but by getting their society to adopt their views, and their delegate to push them, and getting sufficient power behind to have a general vote. Mr. Tyson seems to have cooled down in Union matters considerably during the last few months. Have we to think him one of the disappointed place seekers?

C. R. STEPHENSON.

SIR,—Fanciers! you can surely see through all this writing against the Union. Who is it that is so opposed to the Union but one who sought an official position on it, and because you would not have him as secretary is now tooth and nail against it? Are we to be led by one who is so ambitious, yet when his ambitions are checked rises against that which he wished to control? If London were to rule the Union it would be extinct within twelve months. Why all this opposition? The chief reason is that the Londoners are not at the forefront. They have tried in years gone by to rule the Fancy, but fanciers would not have them. Now that we have a true Union, acceptable to the great majority, they try to thwart it. And why should such a majority work to attain desirable objects and allow the minority to stand comfortably by and reap the results of their work which they will do if you drop Rule 17. I say retain the rule as it has stood this last year. It has been a power for good, and a terror to the evil doers. It may entail a slight hardship on the members for a year or two, but, brother fanciers, what of that if by a little sacrifice we can benefit the whole body of Cage Bird fanciers. Never before has such a measure of success attended the efforts to form a Union. We have now to keep it alive that the good work begun may flourish. Your votes will do it. See the examples of Blaydon and Hartlepool. Plump then for Rule 17.

T. C. CRAWHALL.

CLUB NOTICES.

No charge is made for notices of forthcoming meetings, but they can only be inserted once. Should secretaries desire to secure immediate insertion of their announcements **exactly as written** they can do so by prepayment at the rate of three words a penny.

Blackburn and Dis. C.B.S.—May 30th, at Meliona Restaurant, 8 p.m. Rule 17 C.B.U.; Members' Show business.—J. W. Marsden, sec.

Blaydon-on-Tyne and Dis. C.B.S.—June 1st, at Co-op. Hall, Blaydon, 7.30 p.m. Consideration of schedule.—D. A. Ogilvie, sec.

Bradford (East) O.S.—June 1st, at Park Chapel Schools. First Feather Show; judge, Mr. W. A. Cowgill (Girlington); all birds to be staged by 2.30. —H. Hill, sec.

Bramley O.S. (Leeds).—May 25th, at Headquarters, 7.30. Classification for First Feather Show; voting on the novice question for C.B.U.—J. Metcalfe, sec.

Chester and Dis. C.B.S.—May 28th, at Nag's Head Cocoa House, 8 o'clock. Special general meeting.—A. J. Red, sec.

Cinnamon-Marked Y.C.C.—Committee meeting, May 25th, at Market Tavern, Bradford, 5.30 p.m.—R. Garnett, sec.

City of Bradford O.S.—Arrangements for ramble. Meet June 2nd, at Midland Station, 10 o'clock, to proceed by 10.15 train for Menston, en route for Otley, Denton Park, Askwith, etc. Fanciers or friends are assured of a cordial welcome.—P. Stansfield, sec.

Coventry O.S.—May 29th, at Sydenham Palace, Ford Street, 8.30 p.m. Mr. F. W. Harris will lecture on "Colouring Agents"; faneiers invited.—G. Turrell, see.

Crook Original C.B.P. and R.S.—Special meeting, June 1st. Members kindly attend, business important.—A. Bowes, sec.

Darlington C.B.S.—May 29th, at Half Moon, 7.30 p.m. Leeture, at 8 p.m., by A. Brown, Esq. (Gateshead), on "Colour Feeding and Moulting"; open to all interested.—E. Brunskill, sec.

Gateshead and Dis. C.B.S.—May 29th, at Lockhart's Cafe, High Street, 7.30 p.m. Rule 17 of the C.B.U. and what constitutes a novice; also correspondence.—T. Taylor, sec.

Glasgow and Western Counties N.M.B. and F.B.C.—May 25th, at 122, Ingram Street, Glasgow, 6 p.m. Monthly Show; classes—Yellowhammer, A.O.V. Bunting, Lesser Redpoll, A.O.V. Small British; classification, etc.—Adam and Jack, secs.

"Impossible to equal for clearness, utility, completeness and money's worth."

That is the Universal Verdict on

THE STOCK BOOK.

The Latest Publication for the benefit of keepers of cage birds. Is framed on novel lines and contains many entirely new departures. Is absolutely indispensable to everyone interested in the hobby.

To meet the need for a substantial book designed to hold a permanent record of the progress made by any Fancier in the hobby, we have had compiled by Mr. G. E. WESTON, our

BREEDING ROOM REGISTER

AND

BIRD KEEPER'S ACCOUNT BOOK.

(COPYRIGHT.)

Which offers in a handy form a means of keeping—

The complete pedigree and description of every bird in one's room.
A full record of the season's breeding experiences.
An account of every young bird reared, and how it was disposed of.
A register of one's doings at the shows (the most complete and useful yet devised).
A cash account for the year.
A profit and loss account of the season's proceedings, and a balance sheet showing how much one has invested in the hobby.

A series of Registers will thus furnish a concise record of the career of a fancier as a breeder and an exhibitor from year to year, or over any number of years.

Many useful Emergency and other Hints will also be found in its pages.

A Few Tributes.

Your Breeding Register must prove a boon to breeders of pedigree stock.—A. MUIR, Hon. See. City of Glasgow O.S.

Your Register is very handy and complete, and no room for improvement.—HY. EMERSON, Grimsby C.B.S.

I don't see where I could suggest any improvement or alteration in your register. It is the most up-to-date register published. I will push the sale as much as I can.—JAS. A. IRVINE.

Your Register is beautiful. I shall do all I can towards furthering its undoubted usefulness to bird breeders.—F. EASTERLING (Battersea and District C.B.A.).

Register is remarkably well got up, and as near perfection as possible. I will push it when possible. It should find a ready sale.—E. L. A. CROW, Hon. Sec. Lowestoft F.S.

Register should be in every breeder's room. I fail to see where any improvement can be made. It should be a boon to every faneier.—JOSEPH SMITH, Sec. Sutton-in-Ashfield O.S.

Breeding Room Register is grand, no breeder should be without one. I recommend it to all fanciers.—W. HOWE, Sec. Wellingborough C.B.S.

Breeding Room Register is the most compact article of its kind I've seen. It will certainly be a most difficult job to improve it. It is simple and comprehensive.—J. M. NICHOLSON, Hon. See. Seaham Harbour C.B.B.A.

Your Breeding Register is far in advance of anything I have yet seen, and reflects great credit on your Mr. Weston. It should prove a very useful article in any room.—J. LAIDLAW, Hon Sec. Hawick O.S.

H. Foden (Ashton-under-Lyne and Dis. O.S.) says:—Your Breeding Register is one of the best I have ever seen. It is quite up-to-date, and I am sure no bird room can be complete without it.

Your Breeding-room Register to hand. It is about as complete as it is possible to make it, and certainly more so than anything I have previously seen. It's a credit to "C.B." and Mr. Weston, the compiler.—D. A. OGILVIE, 15, Theresa Street, Blaydon-on-Tyne.

The Breeding-room Register is just the thing that is required in a fancier's room, and is compiled in quite an unique manner, handy and simple. Trusting it will be received in a manner which it thoroughly deserves.—T. H. TIFFIN, Hon. Sec. Ormskirk C.B.S.

The Register and Stud Book should be in every bird-keeper's room. It is the best I have ever seen, so beautifully finished, and should prove very useful to those who wish to keep a record of their stock.—G. H. BARNWELL, Hon. Sec. Harrogate C.B.S.

Your Breeding-room Register to hand. I must say you have set me a very difficult task to suggest any improvement in it. I thiuk it a splendid register, and predict a great sale for it.—A. J. HEAD, Hon. Sec. Met. A.C.M. and H. Breeders.

The pedigree part of Breeding Register is well thought out, and will be a great boon to careful breeders; the breeding part is neat and well planned. The young bird register is also well adapted; the whole book clearly shows the work of a careful and competent breeder.—W. B. MACKIE (Aberdeen).

Breeding Room Register is a really up-to-date book, the very thing to help the novice. After he has won your breeding record competition for quantity, he will then, by using the pedigree register, be able to breed quality as well.—F. HOWES, Hon. Sec. Wolverhampton C.B.S.

Your Breeding Record is a worthy addition to your marvellous collection of books, which have done so much good for the Fancy. Every breeder ought to be provided with one and a copy of CAGE BIRDS ANNUAL; they will then have two valuable assets to fall back upon, either in success or adversity.—H. HILL, Sec. Bradford East O.S.

The Breeding Room Register is just the thing that was wanted; it is well worth double the money. The information it contains I would have given shillings for a few years ago. Then there is the register, which is the best of any I have ever seen. It is useful for the old faneiers as well as the novice. I ean recommend it to all my friends.—ALEX. DONNELLY, Shaw.

QUESTIONS & ANSWERS

DOUBTS AND DIFFICULTIES SOLVED BY SPECIALISTS.

Queries will be answered under the following conditions:—

(1)—*All questions must be clearly written in ink (or typewritten) on one side only of poper, and must conclude with either the correct name of querist, or a pseudonym, or initials.*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper and enclosed with the query. In no case must the address appear on the query.*

(3)—*Queries intended for different specialists must not be written on the some sheet of paper.*

(4)—**Queries must not include** *or be included in orders for books, instructions re advertisements, or any other matter for publication.*

(5)—*The department to which the queries refer must be stated in bold letters on the left-hand corner of the query.*

(6)—*If an answer in the same week's issue is desired, queries must be posted to reach us by* **Monday's first post** *at latest. Querics will be dealt with in the order in which they are received, and only os space permits. The earlier queries are received the better attention they are likely to have.*

(7)—*Queries relating to illnesses of birds, except enquiries os to couse of death (for which see Post Mortems) will be answered by return of post on receipt of a postal order for sixpence and an addressed stampcd envelope. Qucries of an ordinary nature will be answered by post, if desired, on receipt of a postal order for one shilling and a stamped addressed envelope.*

(8)—*All who require letters of complaint written to advertisers must state grounds for doing so cleorly and fully, and enclose a fee of sixpence to pay postage expenses, &c., otherwise their letters will not receive attention.*

(9)—*All queries must be oddressed* **the Editor, "Cage Birds,"** *154, Fleet Street, London, E.C. Only queries so sent will be answered. Postcards are not admissible.*

NOTE.—Readers are requested to carefully study past numbers and current issue before submitting questions. By doing so they may save trouble and unnecessary repetition.

THE following gentlemen represent CAGE BIRDS staff of **ADVISORY EXPERTS.** Queries must in no case be addressed to any of them individually, but to the Editor.

Norwich Plainheads.—**J. H. Payne.** Yorkshires.—**H. W. Battye.** Crests & Crestbreds—**W. E. Greeves.** Cinnamons—**J. North.** Miscell.—**"Old Judge."** Border Fancies—**J. CANARIES.

NORWICH PLAINHEADS.

Answered by J. H. PAYNE.

Eggs Cold.

K.D.F.—(1) By all means let the hen sit her time out, notwithstanding the fact that she remained off the eggs long enough for them to get cold, especially as you say she is not sitting well. You will probably have youngsters hateh out if the eggs were fertilised. (2) If your cock bird feeds the hen and the young birds do not think of taking him away. Let well alone.

Young Birds and Green Food.

T.E.R.—The probability is that the hen would have fed the three young ones that died had you put green food to her at the commeneement. The fact of her feeding the remaining one as soon as you gave her some dandelion leaves, points unmistakably to such a conelusion. If the young one is going on well you might let it remain. Let the hen have plenty of green food the next nest, chickweed if you can procure it, also plenty of hemp seed. Give the green food fresh two or three times a day. As you say the cock bird has the reputation of being a good feeder, by all means let him stop with the hen, as a good reliable feeding cock is a valuable asset to a breeder.

YORKSHIRES.

Answered by H. W. BATTYE.

Matrimonial Infelicity.

Ellis Dean.—The bird that is always fighting with the cock I am inclined to think is a cock, though some hens are very pugnacious, and require a partner who is determined to be master. Have you examined her? If you are not able to distinguish the sexes, get some practical local fancier to examine her, and he will probably be able to tell you whether it is a hen or a cock. You might try it a few days in a cage by itself, putting the cage where it can see the other birds, and where you can see it, but where it cannot see you, when very likely it will sing if it is, as I suspect, a cock bird. In any case, it will be the best thing to do, as if really a hen it will perhaps be the means of causing it to go to nest straight off. When you pair it up again, say in about a week's time, give egg food daily, sprinkling a little maw seed over it, and for green food give two or three leaves of young, tender dandelion.

Is She a Suffragette?

Not Downhearted.—Some hens are past understanding. I had a young hen myself this time that laid her first clutch of eggs on the cage bottom, and I tried all I knew to drive her to lay in the nest. She also laid the three first eggs of her second clutch the same, then on the fourth morning I was agreeably surprised on going into my bird room to see her on the nest, and she had laid her fourth egg in the nest. I gave her the other three eggs, she laid a fifth, and then went on with her sitting as well as could be wished. I may say until she had laid her fourth egg of her second clutch I had never seen her in the nest, so you need not be surprised at what a Canary hen will or will not do. As to your hen not building, I never give my hens enough material to build a nest, but just a little to play with, as I always line my nests to begin with, any kind of soft thick cloth or felt will do for the purpose. I use a soft felt-like material that tailors use for padding the shoulders in making coats, and this answers better than I have previously tried. Cut it round about the size of your nests, and then clip four V shaped bits out of all four sides, so that it will fit nicely in the nest pan, then give the nests a thin coat of starch or paste, fit in the lining; press it well to the sides, and put in a warm place. When dry they will be ready for use; do this with as many spare nests as you have, so that you will only have the trouble once now and again. If you have been leaving the cock with the hen whilst sitting, try taking him away on the evening of the day the hen lays her third egg, and if you have been doing this, try leaving the cock with her. Some will not sit without the cock, and others will not sit when the cock is with them. A Canary breeder needs to act up to your nom de plume, and not be downhearted; he also should have the patience Job was credited with, for he needs it sometimes.

CRESTS AND CRESTBREDS.

Answered by W. E. GREEVES.

Crested Hen Drowsy.

Constant Reader.—To advise you as to treatment of your hen, I must first know the age of your bird. If you bred it, has it always been in this condition, or has this drowsiness recently developed? I have occasionally had birds of this class, and generally they have been bred from my best; I have one, in fact, at the present time. They have been put under every kind of treatment, but without success, and the conclusion that I have come to is that they are no use, but a nuisance even to see about. If the trouble has been recently developed, I should advise you to keep it on a seed diet: Canary seed daily, German rape every other day, and millet seed in between, with no egg food, and neither hemp nor maw seed. Give a small dandelion leaf every other day, and put a few drops of Parrish's Chemical Food in the drinking water daily for a week. On bright sunny days dip the bird in a bucket of water, which must be the same temperature as the room in which the bird is; do this in the morning between 10 and 1 o'clock.

Blister under Wing.

A. Brawn.—Take a clean needle and just prick the blister, which you say has just formed under the wing; there will be no need to do anything further. These blisters more often than not come on the neck, and if so I have generally found them fatal. Of course, as in everything, there are exceptions. Yours is not in a dangerous place, and the young bird should be all right in a few days.

BORDERS.

Answered by J. PATTERSON.

Contrary Hen.

Novice.—I am rather afraid that you have been too long in putting nest beside the hen, and I expect she has had the seed box chosen as her nesting place. You cannot do more for her with this round. Let her have a nest at once, with plenty of building material such as is sold by dealers in penny bags, or if you are in the country, give her plenty of dried moss and grass, and a little hair to line it with. You will notice if she intends building in the nest, or in the seed box as formerly. If in the nest all is well, but if she insists on the latter you must take seed box out, turn it upside down, and put back again; also place a few spars of wood across in the same direction on the top of seed box, so as she is entirely blocked out, and I have no doubt she will take to the nest afterwards. You must feed her in small tins hung on wire of cage until she has laid in the nest. You can then remove the wood and feed as usual. (2) Your feeding is all right, but don't use any hemp now until the young are hatched, and your birds will derive great benefit from a teaspoonful of egg food twice a week from now onwards till the young are hatched, when you must give it fresh thrice daily, along with green food twice daily.

Sickly Hens.

C.P.M.—There are many causes for hens turning sick when the young are from three to ten days old, and seeing that yours were attending to their duties and feeding well until the sickness came on, I expect it would be nesting diarrhœa; if so, you will notice by the excreta. Let her have milk sop morning and night, with a little arrowroot sprinkled over it, and a dessert spoonful of lime water added to an ordinary sized drinker. Give little or no egg or green food till you see an improvement. Are you sure you were not giving your green food stale? See it is fresh, and if you have any suspicions wash it in a weak solution of permanganate of potash, and dry thoroughly before giving. Another cause of sickly hens is that many fanciers dust the nest over with insect powder when either prior to the young hatching out or immediately they are hatched. You must remember that a hen uses up all excreta passed from the young, some for seven days, others longer. When the young discharge their excreta upon side of nest, it gets mixed with insect powder, and one no longer wonders at a hen turning sick and giving over feeding.

LIZARDS.

Answered by BARKER CLEGG.

Four Silvers in a Nest.

Beginner.—Yes, it often happens there are four Silvers in a nest. I have on several occasions experienced the same in my own room. It is quite likely that in the following nest you may have a Gold or two from the same pair. Of course, you may be mistaken, because I have known amateurs who have been surprised when what they had at first thought were Silvers have moulted out Golds; An experienced fancier, however, can pick them out in the nest. No doubt you will pay more attention to these points of colour, whereby you will get more capable of deciding. The answer to your second question is yes. The lines which you say are clear and distinct are indicative of a prospective good and well spangled bird.

ROLLERS.

Answered by "SCHOOLMASTER."

Makes a "Hissing" Noise.

Rifleman.—I do not think there can be much the matter with your Roller cock, perhaps only a little cold or hoarseness acquired during the recent changeable weather. Keep him out of draughts, and in not too cold a room, throwing a light cover over him at night. Give a little egg food, or canary bread bought from the bird shop, every day. If you dissolve a little sugar candy in its drinking water for a few days, I think you will find the hoarseness disappear—a lump as big as a sixpence would do, fresh daily. Put a piece of mutton suet between the cage wires for him to peck at. If he is no better at the end of a week, well mix a tablespoonful of glycerine with two tablespoonfuls of honey, and stir a small teaspoonful of the mixture into the drinking water every day.

Hen Moulting Again.

Bad Luck.—You are right; it is bad luck to get a hen drop into moult at this time of the year. I should think you must have had her in an uneven temperature, or else a draught. You must separate her from the cock (they can do no good together) and keep her in a box cage in a snug position. Give her the canary and rape, as you are now doing, and, on every second day, give a teaspoonful of egg food, with a sprinkle of maw seed over it. On the days you are not giving the latter give a small teaspoonful of linseed. Get 1 oz. of crystals of citrate of iron and quinine from a chemist, and dissolve as much as will cover a three-penny-bit in two tablespoonfuls of drinking water, changing it every day, and not giving it in tin or zinc vessels, but glass or pot. You may pull her round in time to get a last nest, but it is no use trying until she is in full condition.

No Result Yet.

Sailor.—Perhaps your cock bird is not in condition. It looks like it, seeing that the hen laid one egg a month ago, and has laid no more since; he doesn't drive her to nest, as fanciers say. Is he in full song? It looks as though the hen was in forward condition, else she would not have laid. I note that the temperature of her room was changed, and this might have thrown her back, though it is not clear from your letter whether the change took place before or after the laying of the egg. Her feeding seems to be all right. You should give her a little (small teaspoonful) of egg food every day, letting fall among it not more than four or five spots of chemical food. You say she sometimes seems a little sluggish; this might be due to her being over-fat, perhaps, or because of her liver. Put half a teaspoonful of dandelion juice, from the chemist's, into two tablespoonfuls of drinking water every day for five or six days, it being very good for sluggish liver and "drowsy" hens. She will probably do all right when we get some warm weather. But be sure the cock bird is in form.

Singing and Bathing.

Markham.—It will not do to let the young Rollers hear the song of the Norwich, as they will at once pick it up. Birds being bred for singing purposes must be bred in a room to themselves—Rollers can't be mixed with other breeds. It is not nice to have to move breeding birds about, as it might tend to put them off their duties. Still, if you want the youngsters for contest purposes you'll have to do it, and I think your best plan will be to carry out the removal when they are six days old. (2) Letting the old birds have a bath will not hurt the young. In hot weather it is very beneficial to both, and can be offered freely; in cold weather use discretion, and let the young be a few days old before hanging it on. A little quassia in is good.

Owing to the Whitsuntide Holidays many Queries have necessarily had to remain unanswered until onr next issue.—Editor.

Feet Badly Clogged.

J. G.—You are not using the right kind of sand. It wants to be pure grit, and not contain any dust or dirt, which goes like mud when the excreta falls on it, and clogs round the toes if the birds happen to hop amongst it. Get some pure grit from a good advertiser in CAGE BIRDS (or a sample or two from different ones), and compare it with what you are using, and I think you'll see a difference. You want to wash the toes well with good soap and warm water (a tooth-brush is a good thing to do it with), afterwards drying them and rubbing a little vaseline in, or you might try the Zam Buk now so often recommended.

A Difficulty; and a "Cocky" Hen.

W.R.—(1) I don't know any reason why this hen should not yet do good this season, but you don't want to pair her up yet awhile, but give her a week or two's rest. Let her have egg bread every other day, just a small teaspoonful, with four spots of chemical food mixed amongst it. Put in her drinking water every day, for three days, a half teasponful of dandelion juice, bought from a chemist; then give two more doses, but with a day's interval between them. (2) You made me laugh a bit here. You say you "bought a Seifert hen from a dealer, which has bothered with nesting, but never gets anything into the pan. Worst of all, it has spoilt the song of the cock bird, which was a splendid singer, without a faulty note, for the hen is always singing and has an awful screech. I have separated them, for though they had mated grandly, one peculiarity was that the hen always seemed to act the part of the cock—you will know what I mean, I think. Is it wise to bother any further with it?" Yes; I know what you mean. I should also like to know what sort of young you are likely to get from pairing up two cocks, for the "hen" the dealer sold you is, of course, really a cock. I should have thought you would have tumbled to that. So you'll see it isn't much use bothering further with this "pair."

MISCELLANEOUS CANARY QUERIES.

Answered by "OLD JUDGE."

Young Birds Dying.

Blivion.—It is quite impossible to say definitely why your birds died, but doubtless the extraordinary changes of temperature which we have had the last few weeks have had much to do with it. You are not alone in your trouble; from all parts of the country the cry is the same, and old experienced breeders are no better off than the novices. I can only express my regret at your ill luck, and encourage you to try again.

Seed Samples.

Seeds.—The samples of each seed seem to be of very fair quality, but the samples sent were so small that it is quite impossible to give a really definite opinion. They are all clean, bright, and sweet both to smell and taste, but the canary is rather small. Whilst not first-class samples, they are up to the general average.

Was it the Thunder?

I paired up on April 1st. First egg May 7th, fourth May 12th. I never tried bird breeding before, but as I had a pair of good birds I thought I would try them. On 12th hen stopped, was in nest at 8 p.m., but at 9.30 p.m. we had a very severe thunderstorm; have never seen her in the nest since. Has the thunder frightened the hen? —T. M. C.

T.M.C.—Your feeding is all right, and everything seems to have been satisfactory until the thunderstorm came. Judging by what you say, I can only imagine that the hen was nervous, and became frightened at the unusual conditions. Try them again, and I hope better luck will attend you.

Soaked Seed.

Would you tell me how to keep soaked seeds so that they do not go sour, also how to remove caked sand, which is quite hard on my bird's feet? —H. A. W.

H. A. W.—Soaked seed should be prepared by mixing in equal quantities, canary, summer rape, and hemp seed, soaking it in cold water for 24 hours, stirring and rinsing well in fresh water, and straining off at least twice during the day; when giving the seed rinse it well in fresh water, strain off and give to the birds. The seed should be set soaking each morning and night. For instance, Monday's supply should be put in water on Sunday morning and evening, and so on day by day. To remove the sand from your bird's feet, catch him, and soak his feet for a few minutes in warm water; this will soften the sand, and you will be able to remove it easily. If his claws are at all overgrown, clip them. Overgrown claws are often the cause of dirt adhering to the feet.

A Non Singer.

A Jones.—I can hardly believe your bird is a cock if it is twelve months of age and has never sung a note. Have you tried pairing it? Your feeding is all right, and if a cock the bird should have sung long ere this.

Colour Feeds.

Demain and Briggs.—The samples submitted seem all right, and we see no reason why you should not use them. If we have any preference it would be for No. 1 sample, the colour is so rich and deep.

BRITISH BIRDS, MULES AND HYBRIDS.

Answered by G. E. WESTON.

Hen's Slight Wheezing.

Dock.—Unless the hen seems really ailing, I certainly do not think, under the circumstances, it would be advisable to interfere with her at all. According to your letter, the "wheezing" would seem to be very slight, and to only be noticeable at intervals. If she felt particularly out of sorts she would not continue sitting in the exemplary manner she is now doing, neither would she seem "lively when off the nest." The best and most harmless thing you can give her is the following:—Honey, three tablespoonfuls; glycerine, two tablespoonfuls, well incorporated. Of this mixture, well stir a small teaspoonful into two tablespoonfuls of drinking water, fresh daily, until relief is obtained.

Is it too Late?

Tower.—It is not by any means too late as yet to start Mule breeding. In fact, the present is a very good time to begin, though, of course, one's birds ought to be in ripe condition. It is not often one has much difficulty in mating a Linnet with a hen Canary, for they are kind, tractable little birds. Still, they must be in breeding condition, and I am afraid, from what you say, you own Linnet is not up to concert pitch yet. Feed him on the following stock mixture:—Canary, three parts; teazle, summer rape, charlock, hemp, and linseed, one part each. Also mix niger and maw seeds in equal parts, and give a small teaspoonful daily, in a separate pot. But most important of all, the bird must have a free supply of seeding dandelion, shepherd's purse, chickweed, and groundsel (the two first-mentioned in particular), and also the young leaves and flowering heads of dandelion. A week on this regimen should suffice to fit him for breeding, providing he is at present in song. A Linnet's beak turns a deep slaty-blue colour when the bird is in ripe breeding condition.

About a Thrush.

Postal.—You will find a reply in this issue, given an inquirer concerning a Blackbird, which is in pretty much the same condition as your own Thrush. Possibly the remarks made therein will apply to your case also. Are you sure no parasites infest the cage? And do you give a sufficiency of green food? As regards the song, do you mean to convey that the bird has never, all the time you have had it, uttered other than one solitary kind of note? If so, then I expect it is merely a call note, and that the specimen you have is unfortunately a hen. If the latter really be the case, then you have an all-sufficient explanation of the failure of the Thrush to "burst into full song."

A Match; also an Aviary.

K.D.F.—(1) I fancy you have wrongly summed up the situation. The fact that your Greenfinch and hen Canary do not fight I consider most promising. If a Greenfinch is on bad terms with his partner, or does not "fancy her," he soon lets all parties concerned have unmistakable proof of his displeasure. I counsel you to let the couple go ahead. If you can put a wired slide between them for a few hours, I imagine you will find the Greenie exhibit anxiety to get back alongside his mate, and probably he would feed her through the wires. It might be well to try. (2) Your aviary, 18 ft. long by 8 ft. high by 9 ft. wide, with a stream running through and a piece of rocky ground in it, reads very promising, and I should think it will make a beautiful place. If you care to go in for a few Softbills (the expense and trouble of providing suitable food being no object), you could have a delightful collection of birds therein. One or two of the smaller Waders, etc., would lend distinction to the place—say, selected from the Sandpiper, Redshank, Knot, Ruff, Little Stint, Dotterel, and Dunlin, and not overlooking the Dipper (no relation, of course, but fond of water). You would need to run a piece of coarse-mesh wire netting down to the bed of the stream, to prevent escapes that way. For seed-eaters you can select any species you like from among the Finches and Buntings. For the other Softbills, choose from amongst the Grey and Yellow Wagtails, Wheatear, Whinchat, Stonechat, and Redstarts, Blackcap and Garden Warblers, Bearded and Long-tailed Tits, Waxwing, and Tree, Meadow, and Rock Pipits. Don't overcrowd the aviary, of course. Any birds which prove unduly aggressively disposed should be removed. Some of the above (Yellow Wagtail and Redstart, for instance) are summer migrants, but if your aviary faces south and is well sheltered, I fancy they would winter in it all right. I know cases where they have done so.

A Hand-rearing Trouble.

A. P. Abbeywood.—I am of the opinion that your trouble arises through you relying too exclusively on the soft food when the birds are growing. Young Thrushes and Blackbirds should have given them plenty of cut-up mealworms and garden worms (small). Put a pinch of gritty sand once a day amongst the soft food. If they seem at any time to have a touch of the diarrhœa, a pinch of prepared chalk (from any chemist), well mixed amongst the food, would doubtless put that right. You should certainly also give the nestlings any smooth caterpillars and flies and grubs you come across.

Concerning Young Thrushes.

A. Rushen.—Pleased to know you have been so successful in your hand-rearing experiences when following my advice. Young Thrushes can be caged off separately as soon as they are feeding themselves. It does not matter, however, if you keep all four together for a few weeks, though the cage, to properly accommodate them, will need to he a large one. In fact, the larger a cage is for a single Thrush, the better will he keep in condition and thrive and sing. A box cage, 30 to 36 in. long by 16 to 18 in. high and 12 in. deep, makes an admirable stock cage for Thrushes and similar large Softbills. For outdoor use it should have either a span roof or one sloping from back to front, covered with some waterproof material to keep it dry during showers. It is never advisable to keep two Thrushes in the same cage for singing purposes. The food given young Thrushes, etc., when they are commencing to feed themselves, should be prepared from the first with a little of some vegetable ingredient—cold boiled potato, finely-minced lettuce, grated raw carrot, etc. (note a reply given last week on the preparation of Thrush food). A little scraped raw meat, or a very little grated cheese, occasionally given, will do no harm. I have certainly found it best not to let young birds have a free run at water when commencing to fend for themselves. Still, it is not always easy to manage to let them have a drink at intervals only. The food will be made somewhat moist at first, of course, and milk be replaced by water as the moistening agent; the latter should he gradually brought about in the course of the rearing.

"Toes Doubled Up."

A. T. Allen.—It is difficult to gather the exact nature of the trouble from the meagre particulars you give. I presume, however, the back claw has been damaged in some way, and so slipped forward amongst the front toes. If this is so, get from a chemist a small piece of india-rubber tubing, such as is used on infants' feeding bottles. Cut off a piece about ⅜ to ½ in. long. Anoint the toes with a little vaseline or lanoline (butter will do at a pinch) and pass the piece of tubing over the three front ones, taking the back claw up the leg (inside the tubing). Leave the rubber on for ten to fourtcen days, then cut it off, when the toe should remain in its correct position. Let the hird have narrow perches only for a time—one just under and one just over ⅜ in. wide. If the ahove advice does not seem to hit the trouhle on the head, so to speak, send me a fuller explanation of the matter, accompanied, if possible, by a rough sketch showing how the foot looks.

An Aviary Matter.

H. C. Anxious.—Your aviary, 8 ft. long, 5 ft. wide, and 5 ft. 6 in. high, would accommodate up to two dozen small birds with comfort—I am assuming it is, as it ought to be, roofed in all over. The introduction of female birds often makes the males take up a quarrelsome attitude towards other inmates of an aviary, especially a small one like yours. This may account for your Greenfinch quarreling, though, truth to tell, this species often makes itselt disagreeable when kept in mixed collections. The species you have together ought to go along all right—though, as regards the Weavers, etc., you should consult our Mr. Page, those heing foreign birds, and so outside my own department. You could intodnce a Meadow (or a Tree) Pipit and a Grey (or Pied) Wagtail, which would feed on the same insectivorous and live foods as the Skylark you already have in the place. Other seed-eaters you could safely accommodate are Goldfinch, Bullfinch, Twite, Lesser and Mealy Redpolls, and Siskin, Reed, Corn, Yellow and Cirl Buntings, and Tree Sparrow. The Softbills you must feed on insectivorous food, prepared as recommended in this column; also live foods (note many replies given during the last two or three weeks). The seed-eaters should have teazle, hemp, canary, sunflower, summer rape, and millet seeds, supplied in separate dishes: the other seeds (maw, niger, etc.) should be given occasionally. For green tood, supply any or all of the kinds I recommend, according to the season—chickweed, shepherd's purse, dandelion, groundsel, lettuce, watercress, rape seedlings, etc.

A Trio Concerning Mules.

W.J.S.—(1) Give the Mule, for one day, a dose of saline medicine, as much sulphate of soda as will lie on a shilling, dissolved in two tablespoonfuls of drinking water. The next day give plain water, but the following day repeat the saline, using, however, only half the quantity of the sulphate. Give the bird milk sop, liberally sprinkled with maw seed, to eat. You were very foolish to let the bird go for a fortnight without treatment, although palpably ailing and you will be distinctly fortunate if you succeed in pulling it round. Ailing birds need immediate treatment. (2) There are very few Goldfinches that will not toneh niger, maw, and teazle seeds, and very, very few Greenfinches that do not revel in sunflower seed. Have you offered your hirds these? The hemp seed will do them no harm, providing their cage is large enough to allow of wing exercise being taken. (3) I should certainly think a healthy hen, which gave no sign of desiring to build and breed last season, and which has made no sign this, up to the present, is a barren hen. Such are not common, but crop up occasionally.

About a Mealworm Box.

E.P.—If you could cover the outside edges of the wooden box with tin (bent over) you would probably find it act quite satisfactorily. Still, you can change the mealworms into a tin hox, if you choose, with perfect safety. Remember always that the more room you can give the worms the hetter will they thrive. If you make the change, transfer all the pieces of sacking from the old to the new box. Get a fine wire sieve, and riddle the rest of the contents, throwing away all the "dust" which percolates through the sieve, and transferring the remainder to the new home. It will be found a rare dusty job, I can assure you. I don't know what you mean by "clots . . . laid on their hacks and dead." Do you mean the dead beetles, or what? If so, these are only "shells," and can be removed or left, just as you please. There is no object in leaving them hehind, bowever.

Lark Food going Sour; also Wasps.

J. H. Beaumont.—I don't know what Lark food it is you use which goes sour in a day in the food pot. but I can assure you that no really good food ought to do so. I certainly do not think that the "dry chick food sold at most corn dealers, if soaked in lard and made up into a paste," would be a satisfactory food for any cage bird, much more a Lark. I wouldn't feed any bird of mine on it. Besides, such chick food usually contains a percentage of grit and calcined shell, and I very much question whether it is wise and proper to force these things on birds such as Larks—that is, grit with every meal, whether they like it, and want it, or not. There are plenty of good Lark foods advertised in our columns, and which will, I'll warrant, not turn scur. In our issue of May 4th last, I dealt at length with the feeding and management of Larks. Why not try the food therein recommended? As regards giving dead wasps, "drowned in syrup," to young Thrushes and Blackbirds, I can offer no opinion on the point, never having tried such an experiment. Possibly some kind reader may be able to give both of us some information on the subject.

Blackbird in Poor Plumage.

Rifleman.—Possibly your bird and its cage may be infested with hird lice; this frequently happens where they are kept in a warm room. Or the complaint may be due to poor feeding on your part; if these birds are not given a proportion of vegetable matter amongst their daily food, and some fruit now and again, they soon go off in condition. Read the reply to "T.N." in last week's issue, and follow the advice therein, should your method of feeding be at fault. Leave off the sulphate of soda, but you could continue the flowers of sulphur for a time, mixing as much as just covers a shilling amongst its soft food daily. If parasites are worrying the bird, then its cage must be scalded out with hoiling soda and water, and, when dry, given a coat of sanitary washable distemper. The bird itself (you appear to be able to handle it well) should be well sprinkled with Keating's insect powder, or pyrethrum powder, especially in the region of the neck, under the wings, and at root of tail, seeing the powder gets well down among the plumage. Put a small teaspoonful of quassia extract (from chemist) into its bath every day. Queries for different specialists must be written on separate sheets of paper; read rules. See our Roller Canary specialist's column for further reply.

A Varied Trio.

F.E.H.—(1) All the birds you specify moult at the usual season, viz., during July and August (normally). Some (the Chaffinch and Reed Bunting, for instance) undergo a partial moult during the spring, which, however, does not necessarily indicate the shedding of plumage, but merely a change of colour due to the dropping off of the fringe of the feathers or some other cause. Some species, however, do actually shed portions of their plumage twice a year (usually accompanied hy some colour change), but not the primary and tail feathers, as a rule. The Lesser Whitethroat is a case in point. (2) At present I don't think a Dotterel would stand any chance of gaining recognition on the show bench. Whether the forthcoming additions to the list of the N.B.B and M.C. will include this lovely member of the Plover family I cannot, of course, say. It would make a handsome exhibit, and, curiously enough, the female is more richly coloured and somewhat larger than the male. In a wild state it feeds on worms, snails, gruhs and a variety of insect life, and probably various grasses and the buds and shoots of various plants. In captivity you would need to supply these things, and get it on to the usual soft food mixture of game or partridge meal (or melox), etc., while probably various table scraps would be relished. A run on a lawn or grass-plot would no doubt be essential to the keeping of the bird in first-class condition. (3) There can be no gainsaying the fact that the majority of the winning Greenfinches of to-day have had some (more or less) colour feed. At the same time, if you can lay hands on a bright grass-green specimen, very rich and heavy in yellow at wings and tail, and large in size, then you need not trouble about colour feeding it.

Some Brevities.

Canary Rejecting Young Linnets (J. B. Mills).—There can be no doubt whatever that the hen Canary recognises the two young Linnets to be interlopers—aliens—and will have no truck with them, consequently fires them out of the nest as fast as you put them into it. If you have no other hen you can try them under, I am afraid the ecuple are doomed. Some hens won't even take kindly to strange young Canaries introduced amongst their own brood; some, on the other hand, make no fuss over such trifles, providing the discrepency in size (if any) be not too great. You could try hand-feeding, of course.

Hand-rearing Linnets (W.M.H.F.).—Feed your young Linnets exactly as advised "Bird Lover" in last week's issue, and you should have no difficulty in bringing them up. Use the soaked rape freely as the birds begin to get well feathered.

Linnet Off in Feather (A.E.L.).—The "bald patches" are not easy to get covered with fresh plumage. Are you sure the bird is not troubled with red-mite? If so, get a little mild sulphur ointment (any chemist will supply it, if you explain your purpose), and anoint the spot gently with it every day for a time, discontinuing it at once should new quills seem to be coming through. Don't use much at a time, and don't rub the reverse way of the feather, upwards, but downwards. If red-mite worry him, though, you will need to be rid of them ere you can expect improvement. Several queries in last week's issue (Canary columns) deal with red-mite.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S., M.B.N.H.S.

Breeding Grassfinches.

My Zebra Finches continually desert their eggs. How can I remedy this? What kind of nest boxes and material do Gouldian and other Grass Finches require?—L. A. FOOT.

L. A. Foot.—I am of the opinion that the Zebra Finches are being disturbed by the other birds; these confiding little creatures will usually nest under almost any conditions. Do mice get into their nesting receptacles? Let them have plenty of grass in flower, and well hide some of the nest boxes and husks behind some twiggy branches, and put one or two husks in some position which the mice cannot reach—that is, if you are troubled with these pests; if so, get a tube of Danysz Virus and use as per directions. In addition to the nests you have already up get some Hartz Canary travelling cages, remove the fitting, cut out two of the bars to give the birds access to the interior, stuff in a little hay, and hang them up. Supply hay and long grass for nesting material, and they will make use of any kind of dried green food you supply them with. You must give soft food when they are feeding young, and as much grass in flower as you can get. Blighty sprays from rose and fruit trees will be much appreciated by the birds, and will help to bring them into breeding condition.

Out-door Aviary Queries.

(1) In my outdoor aviary, 12 by 12 by 6 ft. high, I have 34 Weavers, Finches, and Waxbills. Have I too many? (2) I found a smallish but long white egg in one of the husks; it has disappeared; do you think any of the other birds have taken it? I have not lost any of my birds since they have been outside.—C.L.M.E.G.C.

C.L.M.E.G.C.—(1) The birds you have are certainly not too many for your aviary, and in such space they should not materially interfere with one another. I should say the cold weather we have been experieneing recently has had most to do with your failures so far, but most Finches certainly need soft food when feeding young. I have found ants' eggs scattered on the ground very useful at this time. I have had very healthy broods of Cutthroats reared on nothing else. (2) It is impossible to say which of your birds the egg belonged to, or as to the way it disappeared. I do not think the Weavers are the culprits, more likely the Whitethroated Finches. Surround your nest boxes with plenty of twiggy branches. Frequently the eggs become attached to the hen's breast feathers, and are carried out so, fall to the ground, are broken, and then soon eaten up. You are to be congratulated on the possession of two pairs of acclimatised Lavender Finches; these are decidedly delicate birds when first imported. Such a case as yours helps to prove my contention that even the so-called delicate species, when they have once got over the effects of voyage and confinement in dealers' shops, are both better and healthier, in suitably constructed outdoor aviaries, than they are indoors. I am of the opinion that your next broods will be successfully reared. Cutthroats are somewhat erratic, will simply play at nesting during almost all the year, and then rear a brood or two in the fall of the year.

Grey Parrot and Sulphur-crested Cockatoo.

(1) Is the Grey Parrot the best talker and best screamer among Parrots, and does either sex speak equally well? (2) Are Sulphur-crested Cockatoos good talkers? My bird (a young one) has so far made no attempt to do so, though in good health and plumage.—WHITE COCKIE.

White Cockie.—(1) The Grey Parrot is undoubtedly the best and clearest talker, though the Blue-fronted Amazon runs it very close. Once a Grey Parrot has been properly trained it only screams occasionally, and most when scared or excited. Opinions differ as to which sex is the better talker. For myself, I prefer the male. (2) I have come across many quite accomplished Sulphur-crested Cockatoos, and most individuals speak a few words. Keep your bird where it will hear plenty of conversation, and also try the constant repetition of words and short phrases, and it should soon pick up a few words. The crest should become fuller as the bird matures. For the next month make its drinking water the colour of pale port, every other day, with Parrish's Chemical Food.

Senegal Marabou Parrakeet, etc.

Please give me a description of the Senegal Marabou Parrakeet and the Bare-eyed Conure.—SENGAL.

Sengal.—I do not know what species these dealers or trivial names refer to, but presume Senegal Marabou Parrakeet must either refer to the Senegal Parrot (*Pœocephalus senegalus*) or the Rose-ringed Parrakeet (*Palæornis docilis*). The first-named has a black head, green upper surface, and the greater part of under surface orange yellow; the latter is very similar to the Indian Ring-necked Parrakeet, hut slightly smaller. Neither do I know the species to which the term Bare-eyed Conure is given, nor can I trace it in the fairly numerous works on my hookshelves. I must confess that in the past I have paid little or no attention to the trivial names; they are so unreliable and loosely applied as to make it very doubtful what species a given name belongs to in most instances.

Grey Parrot Weak on its Legs.

I have treated the bird as advised, but it is still weak and mopish. It is ahout six years old, and previously had always heen healthy. How can I treat it?—H. TAGG.

H. Tagg.—I can only advise warmth and quiet for the bird; continue to treat and diet as directed in my previous reply. Keep the bird's bowels moving freely, but not watery loose, by the use of either Dinneford's magnesia or Epsom salts; with the first-named add one teaspoonful to each ounce of the drinking water, and, as to the latter, make the drinking water just saline with same. Continue the chemical food regularly; this is all you can do, and hope for the best. The details you supply all point to this being a case of partial paralysis; if so, I fear the bird will gradually get worse until the end comes, though it will probahly linger some time. Of course, I am premising that there has heen no injury, such as strained leg, etc., in which case, after this interval, you can only leave Nature to recuperate. Keep it in your warmest room, and in a position quite free from draught. I shall be interested to hear how the bird progresses.

Rock Parrot with Diarrhœa, etc.

The bird has been in England a fortnight, and has been fed on bread soaked in tea, ripe fruit, and nuts. It is suffering from diarrhœa and sickness. How must I treat?—M. RILEY.

M. Riley.—It is the sloppy, unwholesome diet that is responsible for your bird's ill health. Do not give tea, coffee, or milk slops, table scraps, or any kind of animal food whatever. Diet: Canary, hemp, dari, wheat, and maize; well mix, and always keep a supply in the cage; green food, grit, cuttlefish, and water must be regularly supplied; also, to vary the diet, give ripe fruit, nuts, plain biscuits, dry crust household, and a little boiled potato (dry). Make its drinking water quite saline with Epsom salts, and let it have only this to drink for one day; for the next two days stir into the drinking water three drops of laudanum, and let it have as much cuttlefish as it will eat. Follow this treatment by a course of Parrish's Chemical Food for two or three weeks; make the drinking water the colour of pale port with the chemical food. Only use a glass or crock drinking vessel while giving drugs. While the diarrhœa continues its cage should be cleaned out twice daily, or the better plan would be to remove the excreta at once. The bird should soon improve under the above treatment, and, if fed as directed, there should be no recurrence of the trouble.

Rock Mynah.

The bird is larger than a Blackbird; its plumage is black with a little white in wings, legs, and lobes on face, yellow. How must I feed and treat?—P. RUSSELL.

P. Russell.—From your description you have the Greater Hill Mynah (*Mainatus intermedius*), which is found on the lower ranges of the Himalayas, to Assam and Burmah. This bird makes a most interesting pet, providing it has a roomy cage which receives a daily clean. A well trained specimen is really a talented bird; it has a full, rich song, marred by one or two harsh notes, is a good and clear talker, and is an admirable mimic. The temperature of any living room will suffice, but like all birds it must not be subjected to draught. It should be given the opportunity to bathe daily. Diet: It must have for its staple food some good soft food mixture (see advertisement columns), or the following is one of the best—game meal, ants' eggs (best), dried flies, dried pupæ, and crushed Osborne biscuits; all the above will keep dry indefinitely. For use, take a portion of the game meal, pour over it as much boiling water as it will absorb, and then knead in equal parts of the other items, when it should be just crumbly moist. For a change, boiled potato or raw carrot may be added to the mixture with advantage. Give it as much ripe fruit as it will eat, and supply some live insects, such as mealworms, beetles, spiders—in fact, almost anything that creeps or flies that you can capture for it. They have one of the most talented birds at the London Zoo I ever met; it articulates very clearly and in a very human voice, "Who are you?"—"What are you talking about?"—"I'm surprised at you!"—"Come a bit closer," and many other phrases, the result of careful and patient training.

Red-crested and Pope Cardinals Interbreeding.

The birds have built in a German travelling cage, and are sitting on two eggs. Is this a rare cross? Would the young be of any value? They have done considerable damage to other birds.—M. ARMSTEIN.

M. Armstein.—I had in my aviary, last year, one pair each Red-crested and Pope Cardinals; the hen Pope died, and this year the Red-crest has paired up with the Pope, torsaking her own mate, and, so far, though they have built (no eggs yet), they have done no harm whatever, though they have for companions a mixed series of birds, varying in size from Waxbills up to Tanagers and Starlings. I should say the Hybrids would not have much more value than the pure birds. They could not fail to be handsome, whichever parent they most favoured, as both parents are certainly heautiful birds. You will have to supply quite a large number of insects if any young are hatched, such as mealworms, live ants' cocoons, beetles, spiders, earwigs—in fact, almost anything that creeps and flies that you can capture; supply these at intervals during daylight. I certainly consider them worth rearing. I don't know of any record of the cross having heen reared up to the present, and it would be an achievement worth trying for. It is very probable that the young of such closely related species would be fertile. Hope you will have luck with them.

Alexandrine Parrakeet Out of Order.

It is very thin, mopish, and breathes heavily. It has been fed on Parrot mixture, ripe fruit, table scraps, and tea sops. What is the remedy?—D. WOOD.

D. Wood.—Your diet is at fault. Do not give tea, coffee, or milk slops, table scraps, or any kind of animal food whatever. Get from your corn dealer a quart each canary, hemp, wheat, dari, oats, maize, and sunflower seeds; well mix and let this be your staple diet. In addition, supply daily, ripe fruit, green food, grit, cuttlefish, and water. Give as extras, to vary the diet, plain biscuit (dry), nuts, boiled potato (dry), and a dry crust of stale household bread. For one day, put one teaspoonful of Dinneford's magnesia in its drinking water, and repeat this as necessary to keep its bowels moving freely, but not watery loose. On other days, that is, when not giving the magnesia, make its drinking water the colour of pale port with Parrish's Chemical Food. Continue this treatment till the bird is in condition again. The diet, as given above, must be a permanent one; the bird will simply get worse and finally die if present diet is continued. Moving the bird from room to room should have no ill effect, providing its cage is not stood in a draught, which no species of bird can stand. The temperature of any living room will be ample for this species.

Foreign Seed-eaters for Indoor Aviary.

The aviary is 7 hy 4 hy 4 ft. and contains six British birds. What foreign birds, and how many, could I keep with these?—"HOPPY."

"Hoppy."—You have accommodatiou for about 18 birds. I hope you have not Chaffinch, Greenfinch or Yellowhammer among your British; if so, I fear you will have trouble later. Choose from the following: Zebra Finches (4/6), Gouldian Finches (17/6), Ribbon Finches (3/6), Ruficauda Finches (10/-), Pectoral Finches (10/-), Long-tail Grassfinches (10/-), Zebra Waxbills (4/6), St. Helena, Grey, and Orange-cheek Waxbills (2/6 to 4/6), Bengalese (4/6, white 10/-), Java Sparrows (3/6, white 10/-); Mannikins in variety (3/6 to 4/6), all per pair. The small Waxbills you could put in half as many again as the other birds—that is, those about the size of a Canary. All those named are handsome birds, the Mannikins heing more sombrely clad than the others.

Foreign Bird Queries continued on p. 469.

POST MORTEMS.

Mr. J. North, 435, Oxford Road, Reading, will examine cage birds for a fee of 1s. 6d. each bird; for a reply direct, 2s. 6d.; analysis, 21s. Subjects for post-mortem examination must be sent packed in a box direct to J. North, with fee. Any sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.

Canary (W. Connor).—Softening of liver, scrofulous lungs, feverishness, and apoplexy caused death of your bird.

Yorkshire Canary (M. F., Jun., Ligoneil).—Enlargement and softening of liver, then inflammation (involving the lungs), ending with apoplexy. I consider this condition to be infectious.

GENERAL.

Answered by the EDITOR.

Names (Geo. Roberts).—Thanks; send the names by all means.

In the Country (T.S.).—Glad to know your holiday was so pleasant.

Bird Publications (Magazine).—You will find one of these magazines advertised in our columns. We can give you no information regarding the other.

Not a Breeder (D. K. Wilson).—We are glad to know that, although not a breeder, you find "C.B." so interesting. That being so, may we ask you to kindly bring it to the notice of all your friends?

Young Nats. (C. Harrison).—Sorry we can't consider your proposal favourably. You might be interested to know that the average number of letters received weekly about this feature is very little short of a hundred.

Colour Feed (E. Brady).—Some of the samples you send are very good, being rich, deep, and bright in colour. It would be somewhat difficult to place them in order of merit, but from appearances we incline to C and B in the order named.

Supplements and Cases (H. P. Johnson).—We published four numbers with supplements prior to 1905, and shall be pleased to send you same for 1/6, post free. Cases for Vol. 10, complete, are now ready, price 1/6, and cases and index for Vol. 1 of the "Bird World" will be ready shortly.

Suggestions (J. Kay).—Most certainly your suggestions are not offensive to us. On the contrary, some of them appear worthy of every consideration, and you can rest assured they shall receive it, and be carried into effect if at all possible. We will see into the distribution matter at once.

THE WICKEDNESS OF COLOUR FEEDING.

SIR,—No, no, Mr. Claude St. John, there is no analogy whatever, but just the contrary. Plants take soda, ammonia, etc., as their natural food—plant life, in fact. Birds are compelled to swallow colour food to gratify the depraved taste of their owners. Now have another smile—or, rather, a good laugh, this time—at your own knowledge.

PINK AND GREEN-STRIPED ELEPHANT.

AN OUTDOOR AVIARY.

SIR,—In last week's issue, page 460, W. S. Brewster is seeking advice on an outdoor bird place. I would refer him to CAGE BIRDS, March 23rd, page 283, as perhaps the bird place therein depicted would suit and the letterpress give him details, especially if he lives in the South of England. If in the North I should say double board it. Size, quality, etc., he could vary to suit his position and space. I have four pairs in my own now, and two are sitting. The "Cabin" still suits me.—J. KAY.

WONDERFUL TAMENESS OF ROBINS.

SIR,—Reading a few notes recently of the exceptional tameness of the Robin when nesting, I would like to record an instance to verify this statement. We have a Robin that has built a nest, and now incubating three eggs, in a futlock hole (a hole for building scaffolding into), which is about 5 ft. above the ground, and we are unloading tons of steel, bricks, timber, and other materials past the spot continually. The ben seems to take an unusual interest in our operations, and the cock gives us a chirp each time we peep into the nest, and has got hold of the idea that our work is being carried on especially for their sole benefit.

F. BOXALL.

East Grinstead.

IS A £5 LIMIT CLASS AN OPEN CLASS?

SIR,—I shall be much obliged if you can help me, through your valuable columns, to settle a small dispute that I feel sure must often have caused considerable trouble. Is a £5 limit class an open class? At first sight, of course, that query seems absurd. But I contend that, although the price is limited, yet any bird one may feel disposed to enter in such a class is eligible, and no bird is debarred from entering; therefore I consider that a man who wins a first in such a class should be classed the same as a man who wins a first in the acknowledged open classes, and not be eligible to any longer compete in novice classes.

H. EMERSON.

[This appears to resolve itself into the eternal question, What constitutes a novice? The point raised is an interesting one, but we hardly see how a £5 limit class can be held to be synonymous with an open class, though, true enough, it is very "close to the wind." Many societies differ considerably as to what does and what does not take a fancier out of the novice section.—EDITOR.]

CONCERNING WAGTAILS.

SIR,—I have been watching the Wagtails lately. Some few Pied and Grey have been with us all the winter. The Yellow has not yet come to my knowledge. Some years since either the Blue-headed or the Grey-headed was reported for our district by no less a person than the Curator of the Halifax Museum. I forget now whether it was *M. flava* or *M. viridis*. So I have been on the watch lately. I had a suspicion that we had the White Wagtail (*M. alba*) too, but my observations have not yielded anything certain yet. I think it a very bad thing that scarcely any book on birds that I have seen gives a good description of the hens. I felt almost certain that I had discovered the White, but on consulting a well-known authority I am inclined to think it was the hen Pied, though the bird had far from a "henny" appearance. Then, again, on Sunday morning I saw what I took to be a Grey Wagtail, with very little yellow on it, and certainly minus the black bib. Only a few days previously I had seen one which had a breast and under parts as yellow as any Canary which has not been fed. I should like to know through CAGE BIRDS if all hen Grey Wagtails are minus the black bib at this time of year, and if there is any other means of distinction between the White and the Pied than by comparing the rumps, which is impossible unless the bird is in the hand. I presume some of your readers will know both the Grey-headed and the Blue-headed, so perhaps they will say if they resemble the Grey very much. A short time ago I was looking at a case of birds that had been shot in our district 50 years ago, and there was one that I can't find mentioned in the British list. It appeared to be of the Warbler tribe, judging by its bill, which was about 4½ in. long, had a sort of brownish beak, a black cap, which came right round the neck and extended some way down the breast—something like the cut of a Pied Wagtail; whilst its face was a deep jonque yellow. The outer tail feathers were edged with white, whilst the centre ones had no traces of white on them at all. Have you any idea what this could be? W.

CHAMPION LAYERS.

SIR,—I have a Norwich Buff hen sitting on nine of her own eggs. Following are the particulars:—She laid five eggs six weeks ago, and hatched four. The second nest she laid four eggs right off, rested a day, and then laid five more right off. I am expecting the eggs to be hatched about Thursday this week. The cock bird is a Yorkshire Green. I have been a breeder for many years, but never had more than six at a time.

HENRY BABER.

PROPOSED LINNET CLUB FOR SPRINGBURN.

SIR,—Kindly allow me to ask some of our Linnet fanciers in Springburn why cannot we in Springburn have a Linnet club, and arrange for meetings, singing contests, lectures, table shows, etc., the same as they have in other places? Surely there are enough Linnet fanciers in Springburn to form a decent club of this sort? I hope some gentleman will take the matter in hand and call a meeting, also let us have the opinion of other Springburn and district Linnet fanciers on the matter in CAGE BIRDS. Wake up, noo, Springburn!

A LINNET FANCIER.

THE LANCASHIRE CANARY.

SIR,—I have been repeatedly asked what I think about Mr. House's lecture on "The Lancashire." In these days one has to be very careful what he writes or says, or he is pounced upon and charged with having some ulterior motive, and, if that charge cannot be made to work, he is declared to be a member of a mutual admiration society, and is simply endorsing all his fellow-members say. The London fanciers were fortunate in having "The Lancashire" for the subject, and a better choice could not have been made in selecting a lecturer. Mr. House's description of the Lancashire is almost as near what a Lancashire should be as it is possible for one man to find words to picture it. Every breeder in the North will be pleased to find that more are taking to breeding this grand variety in the South, and many will be glad to give them every assistance possible. Lancashires are prolific breeders, easy to rear, one of the oldest varieties, and certainly the noblest looking Canary in the show cage. As I have promised to lecture on "The Lancashire" at Glossop on June 2nd, I shall have an opportunity of going into more detail, and should be highly pleased to see a large number of visitors. The members of the Lancashire and Lizard Fanciers' Association would give them a hearty welcome. I shall have something to say about mating, and also about the show cages.

S. R. COMPSTON.

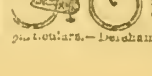
SIR,—In thanking Mr. Fuller for his appreciative remarks anent my lecture on the Lancashire, it gives me much pleasure to answer his question about the length of the Coppy and Plainhead. In life, birds vary in length and width of head and length and stoutness of body, therefore if true to Nature, an artist would make a difference between two individual birds; but in sketching two ideal birds, then the heads and bodies should be in exact proportion to each other, the Coppy being the counterpart of the Plainhead, with the exception of its headgear.

C. A. HOUSE.

THE DEFINITION OF A NOVICE.

SIR,—The reason given by the Hartlepools C.B.S. for adopting suggestion No. 3 issued by the C.B.U. is certainly interesting, viz., because it got rid of the most successful exhibitor in the least possible time, and if this suggestion is adopted by the majority of those voting I am of the opinion that the Fancy will not continue to increase as latterly, and would respectfully point out that if a novice acts on the advice of almost every authority and buys the best he possibly can it is likely he may win his three first prizes at the first show at which he exhibits, and thus be compelled to exhibit as a champion without even having experienced a breeding season. While it is not desirable to prolong to any extent the reign of a novice I feel it is not the desire of the Fancy to get rid of him, but rather allow him a reasonable time to gain experience which will enable him to retain his position when promoted, and trust to further that end the majority will plump for suggestion No. 4. Fanciers who have experienced the effect immediate promotion even to an amateur section, will, I feel, support me in stating the bad effect it has had on their particular societies. A novice promoted by suggestion No. 3 is hardly likely to gain sufficient experience to hold his own with the champions, and it will only require a few rebuffs such as entry fees, carriage to and from shows, etc., without even the sign of a prize to determine such an one to give it up, and thus those so frequently termed the backbone of the Fancy are driven out. Allow them a reasonable time and you will stand a much better chance of retaining them.

JOHN TYSON.



M'thly. £3 10s. GIGANTIC FACTORY SA... Off-rd. (500 new "Clincher Tyred" F.W. Cycles for £3 15s. by instalments; or, cash with order, £3 10s. Wonderful double. Free on rails Norwich; approval. Send no money. Send Post Card for ... particulars.—Dereham Cycle Co., Norwich.

THE USE OF HEMP SEED.

SIR,—I notice, in giving the results of his examination of the dead bodies sent to him, that Mr. North, in a large majority of cases, gives "softening of the liver," or "liver disease," as the cause of death. May I ask him through your columns if the too generous use of hemp seed is conducive to the state of things described? I have heard it said that hemp seed causes softening of the liver in birds, and for that reason should not be used in large quantities—in fact, only as a pick-me-up when birds are run down, or as a stimulant to get them into breeding condition.

INQUIRER.

PROPOSED SOCIETY FOR BURTON.

SIR,—Referring to Jumbo's letter, I should like to say a society was formed in Burton a year or so ago, but owing to bad luck and fanciers getting disheartened it was decided to let it lie dormant for a time. No doubt, had fanciers stuck together, it would have carried on all right. There is a mixed society in the town, and if they would, as Jumbo says, arrange for lectures, table shows, etc., I think their membership would increase. Otherwise, I for one am in favour of a C.B.S., as there must be something to attract members to the meetings.

TRY AGAIN.

NORTHERN YORKSHIRE C.C.

SIR,—The committee have decided to grant three medals, or value, at each show they give their patronage to, one for the best old bird, one for the best young bird, and one for the best bird shown by a novice; also, in addition to the above, a special for most points gained by three nominated birds over all the shows where patronage is given. This is in addition to the cup for best young bird bred by a member, for which we are asking subscriptions. I have only £3 promised towards this cup. We would like it to be at least £5 value, so that if any of your readers who feel generously disposed will send me a small donation, it will be very gratefully acknowledged. We have now 31 members on our books, which is considered very good for our first year's working, especially as the Yorkshire has previously been so neglected in the district. Will those members whose subscription has not yet been paid please note that, according to rule, it must be paid before June? Those of our members whom I have seen are having very indifferent results this breeding season. One member has had over 60 eggs, and not a single young bird alive.

T. C. CRAWHALL, Hon. Sec.

A NOVICE'S EXPERIENCES IN CANARY BREEDING.

SIR,—After reading the excellent articles and reports of lectures and papers read before cage bird societies in various parts of the country which have recently appeared in your columns, I thought possibly my experience as a Canary breeder would be interesting to some of your readers, if not exactly instructive. This experience, I may add, is of a very limited nature, for although my father had one Canary which he kept for about 15 years, this veteran never, to my knowledge, sang a note, though we continually hoped that some day he would reward our patience. But he died instead. About 18 months ago I saw an advertisement in one of the Sunday papers offering beautiful singing Canaries (day or gaslight, though why they did not add oil and electric, must, I suppose, be due to an oversight on the part of the writer of the advertisement) at 3s. 9d. each or 21s. a stick. The stick business I did not understand, but the 3s. 9d. each was quite clear, and I sent for one. This duly arrived, although in the meantime I had been called on to pay another 3d. for packing or travelling cage, I forget which, and also 10d. for carriage. However, I concluded this was not expensive if I got a good songster. I caged and hung him in the position specially selected, which would allow his song to be heard in every part of the house. For a few days we made many and varied excuses for him not singing, but as time went on, and still no song, a family conference was called, and the matter thoroughly discussed, the final decision being that his food was unsuitable, and must be immediately changed. The variety of seed I obtained from the local seedsman caused that gentleman, I really believe, to imagine I had purchased a Zoo, and kept it in the garden or elsewhere. About this time I came across CAGE BIRDS, and obtained from it all the information I could re singing Canaries. We continued our treatment for some time longer, and supplemented the seed diet with egg food and biscuit, fat bacon in the wires, apple (sliced), boiled carrot, raw onions, and watercress, adding to his drinking water the mixture recommended by your Mr. Lester, and in which one of the component parts was whisky. I am not sure we did not have serious thoughts of giving him champagne, but it was all to no purpose—sing he would not! But he was a capital trencherman, and enjoyed it all immensely. After further endeavours to fathom the mystery, we thought perhaps he would sing if he had a mate, for had I not seen one of your specialists' replies to a correspondent in which he said, "the cock by this time ought to be singing her (meaning the hen) round the cage"? I bought a hen and put them together, they apparently agreeing fairly well. That went on for a time, when I noticed the cock wanted to make a nest, as he was continually carrying feathers about in his beak. I then got a breeding cage, and turned them in. They soon made a nest, after fighting, re-arranging, and fussing about generally. A few days afterwards I found an egg, the only drawback to my pleasure being still without song. Never mind, he would sing later on. The eggs continued to arrive—one, two, three, four, five, six (Good gracious, how many eggs do Canaries lay?), seven, eight! A reference to my literature on the subject showed that they usually lay four. This hen must be an exception to the general rule, or else I was about to become famous as the owner of a remarkable laying strain of Canaries. I could not make it out at all, but eventually I was cruelly told I must have paired two hens together. This was a heavy blow to me, but the loss of dignity amongst my friends was the worst of all. I determined I would return the "fraud" personally, and would insist on a cock bird songster (day or gaslight) being given in exchange. Well, they gave me another, and assured me that this one was just coming into full song. By this time I had undoubtedly got an attack of bird fever, and I therefore made up my mind to immediately pair these two, and see if I could not breed some songsters. I then should be able to show my friends that there is nothing like perseverance, even if you have trifling mishaps by the way. I started off again with the egg food, which they could eat in champion style, Parrish's Food seemed to be relished as a digestive, until they danced along the perches in real athletic form. They started building, but after a couple of days had a disagreement as to what a nest should be made of, the hen plucking the feathers out of the cock till he had the appearance of a badly picked Christmas goose. But, dear sir, I feel certain your sympathy will be extended to me when I tell you that I had a repetition of my previous experience, viz., eight eggs—sixteen eggs in two nests. People talk of the physical deterioration of the Britisher, our lack of backbone, and general want of stamina, but if an experience of this character was not enough to put any Englishman on his mettle, now what would be? I there and then made a vow that I would breed Canaries, whether from two cocks, two hens, or anything else I cared not a rap, but Canaries I would breed. I have this spring purchased two Rollers, sex unknown, though they are supposed to be cocks, and they certainly sing. I put them with the two hens (sex certain), and last week one of them laid five eggs. I will leave you to imagine my feelings when I approached the cage on the sixth morning. I believe something terrible would have happened if there had been any further addition to the egg basket. Fortunately for all concerned, they stopped at five, which, at all events, is more promising. I am hoping for the best, and should I ever be able to advertise any songsters for sale, I intend, although I have not registered the name, to call them real good "one-lighters." They are quite good enough for me now. With best wishes to CAGE BIRDS.

C.

NORWICH PLAINHEAD CLUB FOR NEWCASTLE.

SIR,—Referring to Mr. Stone's letter, perhaps he will be able to inform me if the three flourishing clubs in Newcastle are confined to City of Newcastle members, or open to the Northern Counties; also if the suggested N.P. Club is to be confined to City or open to the Borders? If the latter, would it not be better, in the interests of catering on a larger scale for the N.P., not only in Newcastle, but on the Borders, if these enthusiastic fanciers would join hands and work in conjunction with the already existing B.C.N. and C. Club? This club holds its meetings in Newcastle, and gives most of its patronage to shows around Newcastle. At our annual meeting in Newcastle six weeks ago, a hearty invitation was given to all, whether members or not. Surely some of these fanciers might have attended. Any suggestions in the way of improving or developing the B.C.N.C.C. would have been welcomely received. Hoping Mr. Stone and his fellow-fanciers will co-operate with us and make one great society.

A. HAY, Sec. B.C.N.C.C.

ERIN-GO-BRAGH.

SIR,—I predict a bright future for the cage bird Fancy in Ireland. With the addition of another specialist club things are commencing to look up. Norwich Plainhead and Crest exhibitors are going to be well catered for next season; the officers in connection with the club will leave no stone unturned to make it a success. From the rule book of the club to hand, I notice it will be run on the same lines as the Y.C.C. of Ireland. Those who have not as yet joined would do well to send on their names to the hon. sec. as soon as possible.

Fanciers in Ireland will be sorry to hear of the departure of Mr. W. Fortune, one of the vice-presidents of the Y.C.C. He has gone to Scotland, but I am glad to say he will still endeavour to send us across some exhibits. I hope he will make the bird of the "Broad Acres" popular over there.

I see that Lifford Ennis, Co. Clare, intend having a cage bird show in connection with their annual flower show, but the hon. sec., Mr. H. Bill informs me that it will be confined to Co. Clare for the first season.

I hear it rumoured that Mr. J. D. Rowe, of Dundalk, is giving up Canaries; I hope it is not going to happen, as the retirement of such a man as Mr. Rowe would be a great loss, especially to the Y.C.C., as his sound advice is always needed and looked for.

Breeding operations are going on fairly well considering the wintry weather. I hear from some fanciers around Dublin that they have several promising youngsters on the perches.

CAGE BIRDS' Breeding Competition is looked forward to with great interest.

A capital idea for Irish cage bird fanciers would be to approach the committee of the International exhibition to have a cage birds' show about the end of October, in connection with the exhibition.

C. J. MULLIGAN.

THE LATE G. LAWSON.

SIR,—It was with surprise and regret I read of the death of Mr. Geo. Lawson, late of Culross, whom I knew well. It was in 1891, when he was taking almost everything before him, that I made his acquaintance. Owing to business I visited Culross from my home, Kincardine, once a week. It was then I commenced this most interesting and instructive hobby, he kindly showing me through his lovely and well-kept collection of birds, in his usual good-natured way. Seeing I was struck with them, he offered me a pair cheap; and, knowing the value of them to-day, they were cheap. From thence I have been a lover of the pets ever since, and for years after, when in touch with him, he was always open to have a talk about the birds. I may say the advice I had from him has been most valuable, he being of a kindly disposition and respected by all who had the pleasure of coming in contact with him. I would not have known of the sad news had it not been for CAGE BIRDS, and it surprised me to think it found its way to the little village of Oakley. If I may be permitted the pleasure, I will give Mr. Hogg a call about August, when I am visiting Kincardine, where, I believe, this paper has also found its way. Kindly convey my deepest sympathy to the bereaved family. J. A. SIMPSON.

London, W.

BORDER COUNTIES NORWICH AND CINNAMON CLUB.

SIR,—It gives me great pleasure to intimate to the members of above club that Mr. Sandiford has granted us one of his two guinea challenge cups for competition this next show season in colour-fed classes. The member gaining most points over all shows under our patronage to be the winner, providing his birds were colour-fed on Sandiford's colour feed. Members should inform me where and when they get their feed, so that I will be able to check their points in due course. I would again impress upon secretaries whose societies are getting our patronage to see that their judge becomes a member, as, if not, patronage will be withdrawn and given to some other show that has a member judging. A full list of shows receiving our patronage appeared in CAGE BIRDS for April 12th. Any member having his subscription still unpaid will do me a great favour in remitting same at once, so that I may be able to draw up a list of specials for show season. Fanciers wishing to join should do so at once, fee 2s. 6d. Besides Sandiford Cup, the club's solid silver Bowl will be competed for at five shows, for most points; also at same five shows a gold medal will be given to the novice gaining most points. The following new members have been enrolled:—Messrs. O'Neal (Sunderland), Buck (Gateshead), Lowthian (Penrith), Lawcon (Carlisle).

A. HAY, Sec.

30, Main Road. Tweedmouth.

THE POINTS OF AN EXHIBITION LINNET.

SIR,—I should like to point out to Mr. Houlton that I did not quote him as an authority on the exhibition Linnet. I believe that I only used his name once, and that was to say that I did not think that he favoured the light throat on an Exhibition Linnet. If I have made a mistake in making the above statement, I should like to suggest to Mr. Houlton that instead of referring Mr. Marwood and myself to a lecture given by him and published in another paper some years ago, that he give, for the benefit of the readers of your interesting and instructive paper, his present ideas of what an ideal exhibition Linnet should be. If Mr. Houlton will kindly refer back to CAGE BIRDS, April 6th, he will there find that I say that my reason for writing was that I thought it was time that a standard of perfection was fixed for the exhibition Linnet, so that both judges and exhibitors would know what was really wanted. Does Mr. H. agree with this statement? Here is an incident which bears out my contention. At one of the most important shows held in England, a certain judge placed three gentleman's Linnets in the money. I will name them Mr. A., Mr. B., and Mr. C. Mr. A. won first, Mr. B. second and fourth, Mr. C. third. Mr. B. purchased the winner. He had, therefore, in his possession the winners of first, second and fourth. Mr. C., being secretary of a show that was to take place the following week (the certain judge again officiating), pressed Mr. B. to send his birds, which he did, with the result that Mr. C. about swept the decks, and Mr. B. did not win a card of any description, and this with birds that stood first, second, and fourth the week before in a strong class and same judge. I think, Mr. Editor, the above incident, also the differences of opinion existing between both judges and exhibitors, goes to prove that it is time that a standard of perfection was drawn up for the exhibition Linnet. F. KING.

RESIGNATIONS AT BARROW.

SIR,—I see in last week's paper that favourite old heading "Resignations at Barrow," and I say that those who put the resignations there were working detrimental to the interests of our society. I told the members so at our last summoned meeting. Now, Mr. Miller, our late secretary, says that since resigning the secretarial duties he has resigned membership, which is quite correct, his excuse being that he was accused of working detrimental to the society's interest, also that his resignation was put into print without his knowledge of it being put there. Now, there is something mysterious about that. But, anyhow, his resignation of membership was read at our last meeting, and it was proposed, seconded and carried unanimously that we accept it. Getting to know this, he rushes into print with this paltry excuse. But the members knew months since the reason why those officers resigned office: simply because one man was made a member of our society whom they did not like, and who knows too much for them. So they threw up their positions (child's play). But I am glad to say the gap has been filled up by other members. Since then we have made about 20 new members—and more to follow. As regards the judge for our Nest Feather Show, it was proposed that our secretary write to four outside judges for their terms. On receiving these, the members thought it would be better to have a local judge, so Mr. Wagstaff (our late president) was elected. Now, at the following meeting the minutes were passed as read, re Bro. Wagstaff judging the Nest Feather Show. Now, it was again proposed that we have an outside judge, and the members, thinking it was going to be too expensive, I myself guaranteed to pay the fee of the outside judge whom the majority of the members were in favour of. I don't know the gentleman, and never saw him in my life; but, strange to say, he is of the same name as myself—viz., Mr. Wynn, of Lancaster—and this is the reason they think I know him. But honesty is my motto, and while I am in the chair I shall see that everything is worked in a straightforward manner to the best of my ability. I wish the Barrow and District Cage Bird Association every success, and I also still remain "a true fancier." F. WYNN (President.)

[We believe the Lancaster fancier and judge referred to spells his name "Winn," and not as given in the above letter.—EDITOR.]

THE CRESTED CANARY CLUB AND THE C.B.U.

SIR,—In your issue of April 27th last I took occasion to examine the contention of Mr. W. E. Greeves that any connection between the C.C.C. and the C.B.U. meant that the former club would be "totally wrecked," become a "nonentity," and that affiliation was "purely a case of give all and take nothing." I pointed out that in my own opinion nothing of the sort would, or could, happen, and gave my reasons at the same time. Now, the expressions made use of by Mr. Greeves cannot be said to be other than strong ones, and if the issue is so plain and so clear, then it should be easy to make clear to all of us exactly how the disastrous state of affairs he predicts is going to be brought about; also, in the course of doing so, to refute the reasons I myself gave for declining to believe that such things could possibly follow. Mr. Greeves remains silent, however. Therefore, I may be allowed to again urge my fellow-members of the Crested Canary Club not to be blinded by mere statements—alarmist statements I might well call them—unsupported by any convincing facts. I wrote: "Neither Mr. Greeves nor anyone else can show in what manner affiliation to the C.B.U. would affect the prosperity of the C.C.C., or interfere with its working methods, or tie the hands of the club in dealing with the interests of the bird it represents." I repeat that challenge. It surely should not be difficult to successfully take up if there is any foundation in fact for the awful pictures C.C.C. members have recently had drawn for them?

In your last issue, however, Mr. John Tyson is pleased to delay my letter "passing into oblivion," while he indulges in a little of that cheap wittieism for which he is distinguished among us—the sort of "witticism" that knows not where wit ends and vulgarity begins. He makes no attempt to refute my own conclusions; he twists much that I wrote to suit his own purposes (a favourite trick with him); and that he is animated solely by animosity towards the C.B.U. is self-evident. Mr. Tyson holds a position under the C.B.U., was recently nominated to hold a higher; now he appeals for someone to compose the epitaph of that body. Is this straightforward procedure? How does he square with his conscience the holding of an official position in a body he is deliberately trying to undermine, and has been practically from the first? How does this attitude and the elevating tone of his communication square with his oft-expressed desire to uplift the Fancy and enlist the best class of people in it? One feels tempted to drag in Burns and quote: "Oh, wad some power the giftie gie us to see oursel's as ithers see us?" One other point, Mr. Editor. You will bear me out that I hold no official position on the C.B.U., so bring nothing more than "ordinary knowledge" to bear on the subject. I, at least, feel sure the C.B.U. (I am not concerned with its officials) is a needed body, and will flourish; also that it is now making progress. What Mr. Tyson's own idea of progress is I am not concerned with, though possibly when the C.B.U. secretary begins to fill page after page of his annual report with gloomy prognostication and wailing and threats of his own resignation, then Mr. T. will admit the C.B.U. is going ahead. A COUNTRY MEMBER.

NON-PAYMENT OF PRIZE MONEY.

SIR,—I should like to ask, through your valuable paper, who is responsible for prize money won in a close club show. I won some prize money at our show held in November. The Secretary called a meeting in December to pay out the prize money, but the treasurer did not turn up. The Secretary had got the door money and the patrons' subscriptions in hand, not having paid it over to the Treasurer. He paid that out as far as it would go, but I and a few more did not get ours. I have asked the Secretary twice to call a meeting, but he takes no notice. It seems to me that as he and most of the committee have got their money they are going to break the Society up, and let the Treasurer keep the money he has, and I and a few more have to lose ours. I should like to know who is liable for the money, as I am only a labouring man, and I can't afford to lose mine. These are things that keep little fanciers from joining Societies.

A. H. D.

[All the members of a show committee are jointly and severally liable for the prize money of any show they organise. The usual course is to sue the Secretary, but in the case of the club becoming bankrupt you yourself are liable for your share of any deficiency.—EDITOR "C.B."]

PARASITES ON CANARIES.

SIR,—Mr. St. John says he can quite believe that the method I put before your readers is, in the hands of an expert, preferable to powder. He doubts whether one wash will remove all the eggs that are on the bird. He seems to have overlooked the fact that I also recommended the use of fluid in same proportion (two teaspoonfuls to a quart of water) to be sprayed on the bird, and surely any novice can do that. In this way it will kill the lice quickly, is preferable to powder, and does away with the necessity of catching the bird, especially if it is paired up and probably on the point of laying. I can recommend this way to anyone who is not capable of washing a bird by hand. I also advise the use of a few drops of fluid in the bath, not much—very little indeed will do—and this will be found more efficient than quassia essence for keeping them free from the attacks of red mite. As for hand-washing not removing eggs of this parasite, it is because I think it does remove them I prefer to hand-wash, as the brush going through the feathers, and the great quantity of water that is used in rinsing will bring the eggs out of the feathers if anything will. Again, he says that birds that are in vigorous health are not generally troubled with grey lice. It is my opinion that if you have them on unhealthy specimens, you are nearly sure to have a few on some of your healthy stock that have been kept near to the cage or cages occupied by unhealthy stock. Often the only reason that a bird is down in condition is because it is infested by these lice. I have found these lice on several healthy birds this season in fanciers' bird rooms, besides on one or two healthy ones of my own. I also find them on any stock that is suffering from what is often called asthma, but I do not recommend anyone to wash any birds that are troubled in this way, as they cannot stand washing. In a case of this sort it is best to use the spray occasionally until bird is cleared. I have received by post a number of letters asking what I should do in cases where these lice have been seen on a nest of young, and here is a copy of one and answer I sent to them. This is from a London fancier:—"I have read with much interest your paragraph in CAGE BIRDS re riddance of lice and red mite. I have a couple of young Crests, 11 days old, and I noticed this morning a red mite on the head of one of them, and I thought a small insect dashing quickly about. My Crests are valuable, and I don't want to do anything rashly. Would it be safe to spray them, or what would you recommend? I shall esteem your early reply a kind favour, as it is awkward washing a bird when they are breeding."——"In no case should I wet a nest of young birds to clear them of insect pests. I should put them into a clean nest; the lining should be soaked in a strong mixture of fluid and water and thoroughly dried; put in fresh hair, and transfer the young to this clean nest. A little common soft soap, just smeared under the ridge of the nest pan and just under the wire as well, will make a nest practically red-mite proof. I should also just lightly spray the old birds occasionally, as if the grey lice are seen on the young I think it safe to say that the old birds have them too." Is there no fancier in or about Bolton open to have a bird that is infested washed at my risk, as per my offer? Then we shall see whether it is efficient or not. My word is not enough on a matter like this. If others will try it, and give their experiences, the whole of the Fancy can then judge whether it is worthy of general adoption or not.

FEATHER PLUCKING IN PARROTS.

SIR,—The title of these few notes is doubtless an intensely interesting one to every keeper of Parrots and Parrakeets, and possibly to many lovers of foreign birds who are not actually Parrot keepers, as there is little doubt the miserable, wretched appearance of a confirmed feather-plucking Parrot—and they are by no means uncommon—deter many a foreign bird lover from going into the Parrot-keeping branch. My intention now is only to just mention a few of the most generally-accepted causes and cures, with some comments and theories based on a variety of cases which have come under my notice. And as many members of the Parrot race go through a partial or complete moult at this season, and are, consequently more liable to begin to form the habit, my remarks may not appear quite inopportune. Idleness, or lack of some occupation to divert the bird's attention away from itself, has long been considered a fertile cause of the habit, and yet it is quite a common thing to find a special family pet Parrot which can scarcely have the least cause for complaint on this score deeply imbued in the habit. Others, again, are to be found which have always been kept well supplied with wood in one form or another to chew up and play with.

Another cause to which the habit is largely attributed is lice. Many of the Parrot race become greatly infested at times with grey lice similar to those which attack poultry. But here, again, it is not every feather-plucker which can owe its habit to this cause, as they are to be found among the very best-cared-for and cleanly-kept birds. Then, some years ago, a very dogmatic assertion was made that sops and other unsuitable articles of diet were accountable not only for feather-plucking, but practically the whole of the tremendous mortality which occurs amongst Grey Parrots, and that a certain prescribed form of diet and treatment should be a panacea for all these ills. However well-grounded the theory might have been, it must have been discounted to some extent when the bird which the originator treated on these new lines became more or less a feather-plucker, and enjoyed a very moderate lease of life in comparison with what acclimatised Parrots of the hardier kinds are supposed to enjoy. Of course, Greys are not worse than other varieties for feather-plucking. I doubt whether they are really as bad as the Amazons and some of the Cockatoos.

In my own opinion I have come to believe that in some cases mechanical causes, so to speak, are at the root of the trouble. When the birds are moulting the larger feathers are very often liable to damage in the quill state by the birds climbing about their cages. Possibly the space may be too confined for these large-bodied birds; the perches, perhaps, badly placed, or the wiring defective, more or less. In any case, the result may be the same. As the bird scrambles about the wires in every imaginable position, it makes use of its tail and wing feathers to aid its movements; and when these feathers are in the quill, and almost ready to burst the quill, a comparatively small amount of pressure upon them bends them at the base and causes them to stick out at an angle.

Unless this displacement is of the most temporary nature, the feather is strangled, as it were, at the base, ceases development, and soon drops out, or is pulled out by the bird. The presence of these damaged quills appear to have a great attraction for the birds, and in many cases I believe they are the first step towards making the bird a feather-plucker. It not only amuses itself by plucking out other quills that are uninjured, but in doing so seems to acquire a taste for the contents, and sucks them with evident delight. Once such a taste is acquired, the cure is almost a forlorn hope. Smearing the feathers or quills where they are being attacked with distasteful substances, spraying the bird with quassia-tainted water, giving soft wood to chew up, or a bit of stout cord to unravel, and placing a cord or thin chain collar on the neck for it to play with, have all been recommended as aids to success; and possibly every method may, singly, or in combination with others, prove of some success.

But it seems to me that every method, to be really a useful aid to cure the habit, should aim at preventing accidental injury to and consequent loss of feathers in the quill state—in a word, to put the greatest temptation to form the habit out of the bird's way. Then its taste for something containing moisture should be gratified by a little sweet fruit every day, such as grape, orange, banana, apple, or even an occasional bit of ripe pear, and any small ripe garden fruits that may happen to be in season, and which it shows a fondness for.

PSITTA.

(Many letters unavoidably held over.)

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. It kills all insects, harmless to everything else.

The Rearing and Management of Insectivorous British Birds.

A Paper by Mr. S. W. Birchley, Gloucester, read before the Sheffield C.B.S. on April 4th, 1907.

(*Continued from p.* 420.)

THE MELODIOUS BLACKBIRD AND THRUSH.

These birds, to my mind, make famous pets. Of course, I openly admit they have one disadvantage, and that is, if they are not very frequently cleaned out, they get in a most frightful condition, which is most discouraging to their owner. When requiring a Blackbird, never catch an old one, for they very rarely take kindly to confinement, but die. I advise you to take a nest of young at nine days old, and feed every two hours with hard boiled egg and ants' eggs, not forgetting a meal-worm occasionally, and, when strong enough gradually wean off on to the food I have already described; by using this method you will get some fine, vigorous youngsters. Should they appear to droop at all, I advise you to give them a litle scraped or very finely chopped raw beef or mutton. You will be able to distinguished the cocks by the blackness of plumage, and as a rule they are smaller than the hen. You will find the adult bird fond of all the insect life you can get, including snails, etc.; also ripe fruit in season. Pied and albino specimens of this bird have frequently been exhibited, but unless the bird is exceptionally even marked with the white feathers it stands little chance of premier honours. When selecting a show specimen get one as stately in carriage as possible, of a dense black colour, and with a rich bill and eye ceres.

You will find a little colour food will greatly help in getting the bill and eye ceres to a good colour. But you very rarely get a really good bird until he is at least two or three years old, as Blackies, like many other birds, greatly improve with age.

The Thrush is a great favourite of mine, and I believe he is one of the most popular of our cage birds. Not only is he a first class songster, but he is a great favourite on the show bench. I advise you to hand-rear this bird also, if possible, using the same methods as I advised for the Blackbird, when you will find him do well. Unfortunately you cannot sex these birds like you can the Blackbird; but, on the other hand, if you are looking for an exhibition specimen, you will invariably find the hens the most distinctly spotted. Of course, there are exceptions to this. That gem of Mr. Howe's is a hen, and lucky is the man who ever gets one to beat her, although there were some most excellent Thrushes on the bench last year. For an exhibition specimen of this variety get one as bold as possible, with good, large eye, well spotted on breast and thighs, the "moonings" not running into one another. Colour feed these birds, as it greatly adds to the warmth of the breast colouring, and also helps to bring the beautiful olive brown back and wing coverings to a richer shade.

THE STARLING AND RING OUSEL.

Taking the Starling bird all round, he is a most amusing pet, and as artful a bird as you could possibly meet. I have known mine many times push up the punch-bar door of his cage and get out. I have then tied it down, and believe me he has untied the string when the knot has been within reach of his long beak. Hand-rear your birds the same as I have previously mentioned, as you will find the adult birds hard to steady, and they will very often sulk and die rather than eat the food you provide them with; but you will find the hand-reared bird very docile, and even affectionate. Don't forget plenty of insect life and ripe fruit, when obtainable; you will also find them partial to cheese, and a little butcher's meat occasionally. Often times he will relish a little green food in the spring and summer-time.

Some are of opinion that the male has no song, but I really cannot agree with this, for the two I have in my possession sing the Thrushes' song most fluently in my presence, and I have known the younger one to try and sing like the Goldies, but he can't manage that yet; still, I believe in time he will succeed, for he does try hard. If you require a Starling for exhibition, get one a mass of spangling from head to tail, and mind and see that the spots are not matted (running together) on the belly. Shape, too, is a great thing in these birds, and also the richness of colour. I should advise you to colour-feed this bird also, as it brings out the brown tints in the wing flights and back.

The Ring Ousel is a bird I have never yet had the pleasure of keeping in captivity, but I should think fed and reared the same as the Blackbirds, no trouble would follow. A very fine specimen was shown last season by a Mr. Burrows; this bird did a lot of winning, and deserved all he got, in my opinion. They are particularly shy birds when wild, and are exceedingly hard to obtain.

Before closing, gentlemen, I should like to say I greatly regret, owing to the serious illness of my wife and indisposition of myself, I have really not been able to write such a lengthy paper as I should like to have done, but I sincerely hope that you will take the will for the deed, and all being well and you are sufficiently interested in the few lines I have written, I will endeavour to do something better for you next season. May you all have a prosperous time this next few months, when you will be endeavouring to excel your past season's work.

MAGPIES IN PICCADILLY.

LONDON CABBIES INTERESTED IN ORNITHOLOGY.

Right under the eyes of a number of sympathetic cabmen an ardent courtship is being conducted on the northern edge of the Green Park, within a stone's throw of Piccadilly. The lovers are a pair of Magpies, who have found summer quarters in a high tree nearly opposite the St. James's Club.

In the intervals of courtship they are intent upon house-building, and have completed the floor of a nest, the rough material for which was easily discovered in the park. Now that they have come to the task of roofing it in, however—the Magpie builds a very solid and comfortable structure, entirely closed in save for one small doorway—the requisite material is less easily found, and there could be no prettier sight than that of the birds flying hither and thither in their search. Whenever there is a gleam of sunshine their pure white scapulars and the inner web of the flight feathers flash out in vivid contrast with the deep, glossy black of the wings. Then, as the birds turn and wheel in the captivating way which has gained them a reputation for beauty from Lapland to the Mediterranean, the long tail-feathers become iridescent with lustrous greens and browns and purples.

Already the Magpies are on good terms with the Pigeons which wax fat at the neighbouring cab-rank and with a pair of Wrens who live next door but one. But the Sparrows they ignore with a contempt as complete as that which they entertain for the roar of the Piccadilly traffic, and the grunting of the motor-omnibuses. The Piccadilly cabmen beguile the weary hours of waiting on the rank by watching the movements of the new comers.

"They're birds of evil omen," remarked one, recently.

"And that's not surprising," rejoined another, "considering the condition of the cab trade."

"Funny thing they should have built their nest opposite our rank," said another cabby. "The Magpie's a wicked, low-down bird. I've been looking up his history at the Free Library in St. Martin's Lane. He's the only fevvered creature that wouldn't go into the Ark along with Noah."

"No wonder he don't mind the rain, then," chimed in a third cabby.

"But you mustn't kill him, 'cause that's unlucky, and trade's bad enough already. I'll tell you what we must do. We must coax him with worms and snails, and try to tame him and make him talk."

"Yes, teach him to whistle and to call a cab."

"'Ow peaceful like 'e sits on his perch mindin' nothin'," interrupted the cab-minder, who had been watering the horses and just left off to join the natural history class. "Look at 'is fevvers—all drenched. 'E's got the cabman's spirit right enough."

"Another thing," said the learned cabby, who had been to St. Martin's Library, "be careful how you leave money about, for the book says the Magpie has a nasty trick of carrying off bright and glittering articles, and hides them in his nest and all sorts of funny places out of sheer mischief."

The amorous Magpies in the Green Park are not the only pair of their species in the West End. The nearest neighbours of the Piccadilly cabbies' pets are to be seen in St. James's Park, where two of their kith are busy rebuilding a nest they have before occupied.

Stray Notes About Birds.

By CLAUDE ST. JOHN.

IS THE BELGIAN DEPARTING?

That the popularity of the Belgian has waned of late years must be patent to all, yet its absence from the last Palace Show must have come as a surprise to many, and incidentally gave rise to the question as to whether the breed was slowly following in the wake of the London Fancy. Surely every bird lover, whether a Belgian fancier or not, would sincerely regret the loss of this formerly called "King of the Fancy," forming as it does one of the most wonderful examples of the Canary breeder's skill and patience. Maybe some measure of its unpopularity is due to the repute it has of being delicate, difficult to manage, and requiring a large supply of feeders to act as foster-parents for their young. Whatever may have been the case in some strains, these charges could certainly not apply to all alike. I know at least one successful breeder and exhibitor of Belgians until recent years, now, unfortunately, gathered to his fathers, who held a high opinion of their hardihood and ease of management, and treated his stock on much the same lines as one might treat the Norwich or Yorkshire. He was able to dispense with artificial heat, and, in a general way, required no feeders to rear his young. Yet his success on the show bench proved his stock was good. Therefore, under judicious management, delicacy cannot be a valid reason for allowing the breed to pass into obscurity.

THE AGE FOR MATING CANARIES.

This is a question which might profitably be discussed more frequently. Except, perhaps, with a few isolated individuals, any definite age for commencing to breed is rarely, if ever, thought of. Nevertheless, it is a factor to reckon with in some of the larger breeds of birds, where size and substance of body are essential points. The usual plan is a kind of happy-go-lucky system of mating up in the spring all the birds that are available for the purpose, without regard to the fact that some of the later hatched birds of the previous season are not more than eight or nine months old, and may be still far from mature. This method will work well enough with small breeds such as the Border Fancy or the Lizard, and with the Yorkshire, where extreme slimness is a virtue it may, if properly managed, be turned to good account. But with breeds like the Lancashire, Crests, and similar large bodied varieties, it is not improbable that breeding from immature birds may have a tendency to cause the stock to degenerate in size. A very successful Crest breeder of former days was a strong believer in this theory, and usually abstained from mating late hatched birds in the following year, thus keeping them over the second moult before mating them. The practice might well be commended to Lancashire breeders to prevent the real, or supposed, loss of substance.

BREEDING FOR COLOUR.

Colouring feeding is notoriously a thorny subject, and the uninitiated reader of the correspondence which occurs from time to time on the subject may sometimes be led to believe that he may safely rely upon foods for putting in—not on, please—his colour. But this is a false notion, and the fancier who wishes to succeed well at colour feeding must first realise that it is just as essential to breed for colour as it ever was. The one who depends solely upon food to produce his colour will sooner or later go to the wall, for unless a certain amount of natural colour is bred in the birds no amount of colour feeding is going to produce an effect similar to that which will occur with birds having plenty of latent colour bred in them. Therefore, whatever type of colour is being sought after the novice should be careful not to get too far away from the green blood. This is the real fount of colour, the value of which cannot be over estimated, and it is only by keeping a fair proportion running through his stock that the fancier can expect to get the best results from colour foods when the proper time arrives for employing them.

YOUNG DEAD IN SHELL.

How is it that one hears of so many cases of young being found dead in the shell during the early part of the season? One of the commonest theories as to the cause of the trouble used to be sudden noises or jarring, such as the banging of doors, etc. But this theory has been pretty well exploded by the circumstances and conditions under which birds have been kept and bred successfully. It would be interesting to glean information from general observations of the nests in which young are found dead in the shell. Here are a few questions, the answers to which will probably contain a solution of the problem. Is the nest a scantily lined earthenware pan a few sizes too large for the hen in question? Or is it in a nest-box with the sides of the nest flattened and making a saucer rather than a cup-shaped nest? And is the material a good retainer of heat? In the early part of the season, when the temperature fluctuates greatly, nice snug, cup-shaped nests are to be preferred, and the ventilated nest-pan, however good it may be for later nests in hot weather, is, I fear, not altogether desirable for the first nests, unless furnished with a good solid nest inside.

THE SONGLESS PEKIN.

We have heard so much about the song, or no song, of the Pekin during the last few years, that one must naturally feel somewhat chary about making any reference to it. But as I offer it as just a simple theory for any or all to cogitate upon or pull to pieces, as fancy pleases, I will not hesitate to give the thought that occurs to me in the shape of a question. Is it probable that a large percentage of the birds imported are young males which have been caged before they had acquired their song from parental tuition? It is a well-known fact that many British birds learn the best part of their song from their parents after leaving the nest, and hand-reared birds of their species, which do not hear a wild bird's song, make but very indifferent singers. Why should not the Pekin be subject to similar conditions? A great many of the birds that come into the market are probably quite young, and not only then, but at all ages the diffieulty of distinguishing the sexes is great, so that when a Pekin does not sing it is usually voted a hen. But judging from all the records the number of singing Pekins is most ridiculously small in comparison with the number of birds imported. Is it likely either that the number of males is so insignificant, or that errors of judgment of sex are made in such a wholesale manner?

THE CANARY BREEDING SEASON

Is now with us and everyone who contemplates cultivating Canaries for pleasure or profit, should immediately procure the Standard Work on Canaries:—

House's Canary Manual

PRICE ONE SHILLING. Post Free 1/2.

Superbly illustrated by the Champion Canary Artist, Mr. H. NORMAN. EVERY BIRD DEPICTED IS A VERITABLE MODEL, and shows the breeder what to aim for. Some idea of the popularity of this Practical Manual may be gathered from the fact that under the title of "The British Canary," it has passed its Third Edition, entering upon a Fourth Edition of 5,000 copies under the new title of "HOUSE'S CANARY MANUAL."

The following Summary of Chapters, etc., will show you how completely the ground is covered —

Aviaries and Cages.	The Young Birds.	Young Birds Dead in Shell.	Exhibiting.
Show Cages.	Food for Nestlings	Red Mite.	Diseases treated very fully.
Perches.	Hens Refusing to Feed.	Clear Eggs.	Every variety of Canary is treated
Breeding Canaries.	Sweating Hens.	Moulting.	upon at length and illustrated.

MR. HOUSE has thoroughly revised and brought this work up-to-date and incorporated a chapter on the "Roller or Singing Canary."

Send 1/2 now and secure a copy hot from the press.

F. CARL, 154, FLEET STREET, LONDON, E.C.

THE SPARROWS v. THE HOUSE MARTINS.

A Humourous Account of Human Intervention in the Annual Duel for Nests.

To-day in my garden, says a writer in the "Evening Standard," has been devoted to making ready for the arrival of the House Martins. The first public meeting of the year to protest against an era of Bulgarian atrocities has consequently been held among the Sparrows. My modest dwelling, all too near London, is still favoured every year by three or four pairs of "temple-haunting Martlets," which add a good deal each summer to the pleasures of existence. The Sparrows also find a good deal of pleasure and satisfaction, of a calculated and unholy kind, in the fact that Martins nest about the house. A Martin's nest is a solid mud erection, involving the outlay of a great amount of honest labour, and it possesses the advantage that with fair usage from wind and weather it is still sound and fit for occupation in the spring after it is originally built and used. Here comes in the Sparrow's opportunity, and the need for Bulgarian atrocities every year.

Indignation Meetings on the Waterspout.

Without my intervention in the capacity of the Grand Turk, by the time that the Martins come Sparrows have already occupied all the existing nests, and hold them against their legitimate owners by their native self-assertiveness. The Martins then have to build new ones, and even if this addition to the colony goes on satisfactorily, and the shells of the fresh-built nests are not seized, as soon as finished, by more Sparrows, the nesting season is so much delayed for the Martins that they often are able only to bring up one brood in the course of the summer, instead of two, as Nature intended. Therefore, as soon as Swallows, of one sort or another, begin to be reported in the papers, I begin the summer's work of making the life of the Sparrow not a happy one and the season opens for indignation meetings on the waterspouts!

Once a Martin's nest is stuffed up with the extraordinary mixture of dry weeds and rubbish heap extracts which the parent Sparrows consider suitable for pillowing their young, the offended Martin has no more use for it, and as a Martin's nest it may be struck off the register. As soon as untidy tufts are seen protruding from the nest's doorway a root and branch policy must be organised against that nest: it must forthwith be poked down with a pole. It is quite useless to let the Sparrows remain in possession, under any idea that since they are provided for already, they will offer less interferenee to the Martins when they come. This is not the Sparrow's way at all. As soon as the Martins have nearly finished a new nest, the Sparrow will probably seize it for change of air, having previously made the other one uninhabitable by his peculiar methods of furnishing it.

The Sparrows have some Fun.

So to protect my House Martins against the Sparrows I have to alter the balance of Nature from time to time with a bean-pole, as I did this afternoon. The difficulty is, not to alter one's own balance too violently and unexpectedly at the same time when standing on the top rung of a garden ladder wielding a battering ram about fifteen feet long. Care must be taken in such cases to construct the implement of light and manageable materials, such as a bamboo curtain rod, with a sweet pea stick tied firmly to the end with garden bast.

During the preliminary preparations on the lawn a flow of satirical and piercing language may be expected from the Sparrows assembled on the corner of the spouting. They are blissfully unaware of the ultimate purpose of your manœuvres, and obviously regard you as engaged in a new and extremely silly garden game. When the knot breaks in the bast they develop, in unison, a particularly offensive laugh. If you are a man of ordinary sensitiveness and self-respect you begin to get a little nettled at this, and tie up the next bit of bast firmly and with purpose. The smart cock Sparrow in the black waistcoat still thinks your behaviour consumedly funny: you would advise him to reflect that they laugh best who laugh last.

'Ware the Addled Eggs.

Having carefully ascended as near the top of the ladder as is felt to be prudent, you proceed to make passes with the battering ram in the direction of the threatened nest. The Sparrows begin to be a little uncertain if there was not some mistake about the point of that joke; their remarks show a distinct change of tone. You, on your side, discover that the only way to keep your weapon under effective control is to hold it perpendicularly and assault the nest when immediately over your head. Reflecting on the possibility of addled eggs, you go indoors for your oldest garden coat, if you have not got it on already, and pull a squash hat as far down over your ears as it will go. The change of popular sentiment among the Sparrows is conspicuously shown by the fact that no laugh is raised even at your present appearance. A few vigorous prods with the pole, and the usurped Martin's nest comes rattling and fluttering down past your ears. On inspecting the debris, you experience a profound feeling of thankfulness that it occurred to you to remember addled eggs.

The Sparrows after this will probably keep clear of the Martins' nests under the eaves till the light-winged birds have come home again; their own efforts will now be concentrated on stuffing hay-balls, which will presently abound with vociferous young, into every crevice of the joists, beams, and spouts, and behind the creepers on the wall. In defence of your newly-sown seeds, as well as of the Martins, who are now engaged in sticking little black bread pills of mud all along the wall under the eaves to discover a good foundation, the campaign is waged more fiercely against these untidy nests. You learn, from repeated and vindictive experiments, the exceeding usefulness, in twisting them out, of your original battering ram with two straight bits of cane tied on side by side at the end, like a sort of primeval toasting fork.

Your Secret History Revealed.

It is not until you have examined in detail two or three large and well-lined Sparrows nests that you realise the amazing intimacy of the Sparrow with the details of your domestic and private life. You are positively reduced to blushing at some of the fragments from the past of yourself and your household, which acquire a peculiarly discreditable and indelicate appearance when disinterred from the dust heap and exposed to the penetrating criticisms of the Sparrow family which has chosen to annex them. You are perfectly certain, for instance, that the Sparrow has not only put his own construction upon the paper label from a liqueur bottle of nine months back, and the dead bunch of violets which you bought outside Cannon-street Station some time in February, but that the entire neighbourhood is informed that your whole family are confirmed alcoholics, and that your own escapades of gallantry are the scandal of the town. Scraps of old letters appear to have a concentrated innuendo in every work when discovered months later in the furniture of the Sparrow's mansion. To treat a bird like this with consideration is kindness wholly misplaced. He deserves every method of extermination which ingenuity can devise. For we know quite well that nothing can ever exterminate him—and that we should be very sorry if it did. All that is the matter with the Sparrow is that he is a great deal too numerous, and consequently aggressive. What he needs is constantly "moving on." Every householder should be his own policeman.

Fanciers are all talking about the Substitute for Egg and Bread Crumbs.

SPRATT'S

COD LIVER OIL CAGE BIRD FOOD

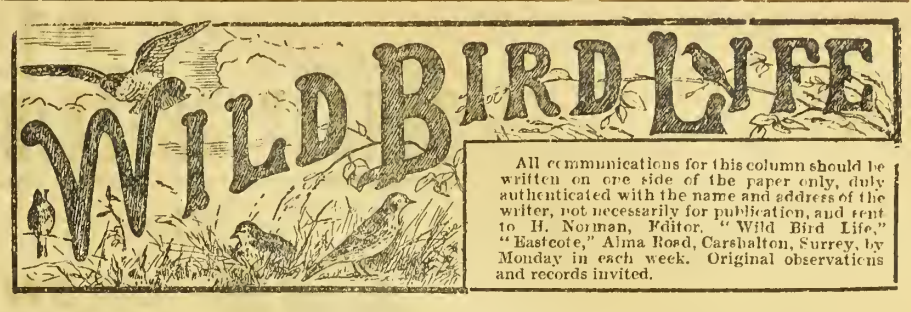
REARS FROM THE NEST. GIVES STAMINA. SAVES TROUBLE AND EXPENSE.

Sold by all dealers, in **3d.** and **6d.** tins; post paid **6d.** and **9d.**; 7 lb. bag, **2/6**, or post paid **3/2**.

Send postcard for Samples, also **Free** Booklet on "Canary and Cage Bird Rearing."

If any difficulty in obtaining food locally write at once to—

SPRATT'S PATENT, LIMITED, 24 & 25, Fenchurch Street, London, E.C.



All communications for this column should be written on one side of the paper only, duly authenticated with the name and address of the writer, not necessarily for publication, and sent to H. Norman, Editor, "Wild Bird Life," "Eastcote," Alma Road, Carshalton, Surrey, by Monday in each week. Original observations and records invited.

The Turtle Dove.

In our rambles we have seen two or three Turtle Doves. These birds are migratory, and are among the last batch of summer visitors to arrive. They evidently love warmth and sunshine, for they are never so plentiful with us as during a hot summer. Although all our resident Pigeons are Doves (for the two words are used in literature almost synonymously when writing of any one of the species) the Turtle appears more fitted to enjoy the name Dove, by reason of his smaller size, colour, and gentle bearing.

These birds appear to drift to our shores in the spring in small flocks, and during the hot summer days go about in pairs, for they are not gregarious during nesting. Like the majority of our migratory birds the cocks appear to reach here first, and it is these we see and note roaming the countryside at the present time. Just now they are not at all shy, but after pairing and nesting commences they become wary, and difficult to approach. It is difficult to define the range of these pretty birds, for it varies considerably according to the season; but they are evidently extending, for we hear of them a good way further west and north than we did a few years ago. Those reaching the extreme north must be as stragglers only.

Although these birds are fond of wooded districts, within easy reach of cultivated fields, some parts which one would think to be ideal spots for them are quite deserted. But, then, in this matter the Turtle Dove does not differ from many other species. We have here plenty of woods, adjoining corn fields, and other cultivated ground, admirably suited to them, but very few are to be met with at any time, although the Wood Pigeons are plentiful everywhere, which fact, indeed, might govern the numbers of the smaller bird.

The Turtle Dove feeds principally upon grain and various wild seed. It is very destructive to peas and tares, but beyond this it must, during the latter part of the summer, help considerably to reduce the wild seed crop for the following year, for we frequently see them alight in the standing corn fields long before the corn has commenced to ripen. They can only be there for the wild food growing between the rows. These birds drink frequently, and during the hot summer weather visit the drinking places several times during the day. If one wishes to see them one cannot do better than hide near a pond in a wood, or any pool of water that birds are known to frequent—the different birds that drink there during the day, in fact, will astonish one. The Finches, the Thrushes, Warblers, and Pigeons, may all be seen in the course of an hour or two.

The Turtle Dove.

The nest of the Turtle Dove is a flat structure, made of dead twigs woven together like basket work. It is so slight that the eggs may often be seen through the bottom. The bird is fonder of building in tall hedges, especially where the whitethorn is common, than the Ring Dove; indeed, it more often chooses tall bushes than trees. It is a close sitter, and one may walk beneath the nest without disturbing it, and when driveu away it quickly returns. The eggs are creamy-white in colour, smooth in texture, and oval in form.

Notes and Queries.

Nesting Freaks.

It is very curious to see the nest of a bird situated in a position so unusual as to appear unnatural; and yet during the summer months this frequently occurs. Only the other day I saw a Blackbird's nest in a carpenter's shop. It was placed flat upon a board, and appeared to be more the work of a man than a bird. It contained two young ones.

A Note on the Shrike.

The Red-backed Shrike is probably one of our most interesting summer visitors. He is exceedingly local, yet returns to the same spot year after year, nesting in almost the same bush as the previous season. He is practically a miniature Hawk, having quite the bold ways of the larger birds; but his prey is principally the large insects and an occasional young bird.

Young Missel Thrushes.

Young Missel Thrushes appear to be plentiful this season. It is quite a common sight to see three or four hopping about after one of their parents upon the grass land. They are very pale in colour when compared with the adult birds, but, although they look very babyish, they are strong fliers, even before they can properly feed themselves. This is quite unlike the young Song Thrushes, for they are very weak upon the wing, and may easily be run down if driven into the open.

Nest in a Pig Net.

Among the very strange nesting places of birds that have come to light must be placed the one just discovered in a cowshed at Brookfield Farm, Churchdown, in the occupation of Mr. George Hannis. About a week after a pig net had been thrown over a beam, says a Cheltenham paper, it was found that a pair of Wrens had built their nest in its meshes and that five eggs were laid. A number of persons availed themselves of Mr. Hannis's kindness to take a peep at the net nest.

Co-Partnership in Bird-Life.

A bird's nest of quite a unique character is to be seen in the wild gardens at Wiggie, Redhill In a rustic arch a Blackbird and a Wren have built a combined nest, about 5 ft. from the ground, and both are now engaged in sitting on their eggs. The nest is oblong in shape, the Blackbird having the top storey, while the Wren is to be seen peeping out of a side door. Although during the past week hundreds of visitors have inspected the grounds, and passed within a foot of the nest, the two birds appear in no way to be frightened.

An Abundance of Songsters.

This season is remarkable for the great number of Nightingales. Last year they were not over plentiful, but it is just possible they had an exceptionally good breeding season, and consequently the young ones would return to the land of their birth, and so the woods are full of the song of this full-throated musician. One may often meet an acquaintance who has probably heard the 'Gale for the first time, and as proof of the extraordinary melody of this bird I do not remember hearing anyone say he was disappointed in the song.

Hawks and Canary.

A gentleman living in Nauntou Park Road, Cheltenham, was called into the garden by his wife one day last week to see a large bird that refused to move when approached. It had flown into a neighbouring apple tree when he reached the garden, but it suddenly swooped down right close to himself, wife, and two children, and attempted to seize a Canary that was in its cage on the lawn. He rushed forward and managed to seize the bird, which proved to be a full-grown Sparrow Hawk. He put it into a cage and photographed it. He kept the Hawk that night, to show it to his friends; but on going to release it next morning he found it dead—evidently of fright, as it had not been injured.

The Unobtrusive Crake.

Of all our feathered visitors that come along this month, one has the unique property of remaining unseen for months to come, though not unheard, by the majority of even those who dwell in the country. This is the Corncrake, or Landrail, a skulking, unobtrusive creature, which crosses the North Sea only on fine nights, and not in the mad March gales that bring so many others to their doom against the lighthouse lantern or treacherous electric wires that girdle all our coasts along the railroads. The Landrail comes alone or in little batches, and at once plunges into the grass fields, there bringing up its family, and rarely flying within the vision of man until, in the early days of September, the dogs and the beaters put it up in company with partridges, and sometimes knock it over—a not very creditable performance, since, as Sir Herbert Maxwell says, it flies along like a great moth. Were it not that the Landrail makes an excellent dish, so slow a mover might well be spared. Some voices, though without music, are pleasing, and the Corncrake's is of these.

Advertisements continued from page 469.

WANTED—continued.

WANTED, three pairs Lancashire Coppies, good size, yellow preferred, yearlings; approval.—Brown, 59, Turnell-st., Easton-rd., Bristol.

WANTED, large mealy Redpolls, two hens or pair; exchange "Daisy" air-gun.—Hardy, Pathfield-rd., Streatham.

"CAGE BIRDS" GREAT
CANARY BREEDING COMPETITION.

A BOON TO THE FANCY.

£28 CASH IN PRIZES.

Two Sections: (1) NOVICES, (2) OLD HANDS.

1. Only Novice Breeders are eligible for the Novice Competition, a "Novice" to mean anyone who has never bred Canaries before.
2. The Prizes will be: **A**, Cup, value £5 (or Cash), First Prize; **B**, Cash, £3, Second Prize; **C**, Cash, £2, Third Prize; and **D**, Five £1 Cash Prizes for the next best in succession.
3. Prizes to go to the "most successful" breeders, meaning those of the competitors who are most successful in satisfactorily rearing the best average of healthy young birds during 1907. Canary breeding season now in progress.
4. The young Canaries must be bred by the competitors on or before July 15th, 1907, next. None bred after that date will be eligible.
5. All stock birds used must be the *bonâ fide* property of the Competitor.
6. Competitors must have the results of their breeding operations attested to by two responsible officials of any recognised Cage Bird Society, or may swear a declaration attested to by two responsible witnesses (form on application).
7. From now till the date of the Competition closing, August 17th, each issue of CAGE BIRDS will contain a Coupon, and when sending in the declaration competitors must enclose the whole series of coupons to show that they have been during the period regular readers of CAGE BIRDS.
8. The Editor's decision shall be final.

FIVE POUNDS Cash, or Cup to full value, at winner's option, is offered for the most successful Canary breeder of any experience. All breeders of one season's experience and upwards eligible. Same conditions as for Novices. The Editor's decision to be final.

We also invite the hearty co-operation of all readers in the following "rolling" scheme:—

THE "TELL SIX" PLAN.

By simply procuring SIX Signatures you may be able to win £6.

The plan is as follows: All you have to do is to tell six of your friends, unrelated to each other, about CAGE BIRDS' great Canary Breeding Competition, and persuade each of them to enter and tell six of their friends about it also. You send in to us the first six signatures to an undertaking to this effect, and if any of the signers are successful in our Canary Breeding Competition we will award you £1 for each successful competitor nominated by you. If any of the six people you tell fill up our forms as appended with signatures of six of their friends whom they have persuaded to enter, we will award them £1 for each successful competitor nominated by them. If two or more people nominate the same successful competitor the nomination prize will be divided amongst the successful nominators. The nomination forms must reach us by May 27, 1907, and the *bonâ fide* signatures and addresses in full of the competitors you have induced to enter must be given in each case. Here is the

NOMINATION FORM.

We, the undersigned, having carefully read, or had read to us, the rules of CAGE BIRDS great Canary Breeding Competition, agree to enter for the Competition and abide by the rules of same. We further, each of us, undertake to try and induce six of our friends to enter the Competition and tell six of their friends about it also:—

Full Name and Address.

1. .....
2. .....
3. .....
4. .....
5. .....
6. .....

The above are the *bonâ fide* signatures and the complete addresses of six intending competitors in CAGE BIRDS' Canary Breeding Competition, and I hereby nominate them to win one of your prizes. If any of them are successful I should like my prize money sent to me addressed as under:—

Name.....

Address.....

Every form sent in, if properly filled up, will entitle the sender, whether a successful nominator or not, to a set of picture postcards, "Dickie in the Dumps."

All forms must be sent in on or before May 27, 1907.

You need not necessarily enter for the Canary Breeding Competition to win one of the nomination prizes. It will be sufficient if a breeder nominated by you on one of our forms is successful in winning one of our prizes. That is to say, if he or she is successful you will be successful. If there is any point you are dubious on, write—

F. CARL, 154, FLEET STREET, LONDON, E.C.

ALWAYS USE OUR

DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor for the *bona-fides* of either buyers or sellers. In all transactions the adoption of our Deposit System should be insisted upon.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient, plus the extra postage incurred, has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller, stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from *both* parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has *not* been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or, if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

PREPAID ADVERTISEMENTS

UNDISPLAYED.—Three Words a Penny up to eighteen words, MINIMUM Fourpence. One Halfpenny per Word for each word over eighteen.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and, after the first eighteen words, are charged at two words a penny, but no single advertisement, even if accompanied by others, will be charged at less than the minimum price, viz., Fourpence.

Headlines or Footlines 6d., 9d., 1/-, 1/6, according to size.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL. Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London. Terms for Display Advertisements on application.

APPLIANCES.

SANDIFORD'S
FAMOUS
ROYAL RED
SEE CRYSTAL PALACE SHOW RECORDS AND TESTIMONIALS.
TWO TONS ALREADY SOLD.

I need hardly point out that the success of Royal Red Feed has been even greater than ever during this last season. I will just point out the great show, Crystal Palace, 1907. Clear yellow, Norwich, Class of 21—1st, 2nd, 3rd, 4th, vhc. Clear Buff, Class of 18—1st, 2nd, 4th, vhc. Tick. Yellows, Class of 19—1st, 2nd, 3rd, 4th, vhc. Tick. Buffs, Class of 20—1st, 3rd, 4th, vhc. Unflighted Yellow, Class of 30—1st, 2nd, 4th, vhc. Yellow Hens, Class of 20—1st, 2nd, 3rd, 4th. Buff Hens, Class of 25—1st, 3rd, vhc. Champion Cinnamon Classes, Yellows—1st, 2nd, 3rd, 4th. Buffs—1st, 2nd, 3rd. Unflighted—1st, 2nd, 3rd. Hens—1st, 2nd, 3rd, 4th. I have only pointed out the great show of the world. Every one of above winners were moulted on Sandiford's Royal Red Feed, these being classes where you can't win without colour. Mr. T. Irons, Northampton, May 25th, 1907.—"Send 56 lbs. Royal Red, 6 lbs. hot at once."—Mr. W. Dormer Rishton, May, 1907.—"Sir,—Save me 112 lbs. Royal Red; all my winners last year were fed on it. Mr. E. Godley Riston, April, 1907.—"Sir,—You must save me 56lbs. Royal Red. I never had such a hot colour before last season. It was splendid, as proved by my wins at all leading shows, which were: 77 1sts. 68 2nds, 55 3rds, 42 4ths, 43 vhc's, 34 hc's, 102 specials." Mr. E. Baker, Cowes.—"Sir,—Once more I have the pleasure of congratulating you on the success of Royal Red. I fed all my birds entirely on your feed. My clear yellow, which won cup and medal for hottest bird was red hot. At the Palace I won three 1sts, one 2nd, two 3rds, etc., four specials, for best Norwich. In such company I think it speaks volumes. Also was very successful at Plymouth, Portsmouth, Dulwich and Peckham, L.C.B.A., Newport, Bournemouth, Camberwell Baths, etc. Send me 1 cwt. of your new feed." Mr. W. R. Miles, Chichester (another big Palace winner), April, 1907. "Sir,—Send 30 lbs. Royal Red, 7 lbs. hot, 1 cwt. Spanish canary." Mr. H. W. Battye, Huddersfield.—"Sir,—Send me 56 lbs. Royal Red. Last season's were splendid." Mr. J. Howard, Norwich, April, 1907.—"Sir,—Send 2 cwt. Royal Red, 28 lbs. hot, to start with. They never saw such colour as last year in Norwich." Mr. A. G. Davis, Manchester, April, 1907.—"Send 112 lbs. Royal Red, 14 lbs. hot Natal." Mr. Cochrane, Edinburgh, May 25th, 1907.—"Send 112 lbs. Royal Red." Mr. Pickles, Shipley, May 1907.—"Send 1½ cwt. Royal Red." I think above enough to prove to anyone that there is only one colour feed in this world; that is Sandiford's famous Royal Red Feed. Send stamp for samples.

Prices this season: 1 lb. 2/-; 2 lbs. 3/5: 5 lbs. 7/6.
Hot Natal, 2/- lb.; 2 lbs., 3/8. Note, these prices are carriage paid.
Agents and Wholesalers send for this Season's Prices.

BOOKS.
THE HYGIENE OF BIRD KEEPING.
By W. GEO. CRESWELL, M.D., L.R.C.P., F.Z.S.
Price 1/1, post free from CAGE BIRDS Offices,
154, FLEET STREET, LONDON, E.C.
OPINIONS OF THE PRESS.
LANCET: "This little book will be welcomed by all lovers of birds, whether ornithologists, aviculturists, or the owners of a single pet songster. The author deals with his subject in a thoroughly practical and scientific manner, and the results of his experiments prove the fallacy of some rule-of-thumb theories. . . . The book is well illustrated."
COUNTRY LIFE: " . . . a surprising amount of really valuable advice for all who keep small birds, whether in cages or aviaries. . . . Those who approach the subject with an open mind must admit the cogency of the author's arguments; and these, backed by a very wide experience at first hand, will prove hard nuts to crack for many of the champions of the 'good old methods.' . . . We venture to think that his experience will pave the way for a revolution in the methods of bird keeping in the near future."

MATTHEWS, LINNET KING.
Linnet Singers and Mule Breeders.—I have the finest stock of Linnets in England. Some real good birds in full song, been taught under my well-known champions, steady, been caged months, real bargains, 2/6; also the finest lot ever seen, all ready for Mule breeding, good, large, healthy birds, nut brown backs, blood-red breasts, blue beaks, in grand song, 2/6; special birds, 3/-. Those intending Mule breeding should send at once for one of my special birds. Free sample of my special mixture sent with every order, also sold at four packets 1/-; my special wild seed mixture also sold at four packets 1/-. No Linnet singer or Mule breeder should be without it, as it is the best you can possibly get. Gentlemen, read what others say about my Linnets: —"6, High-st., Dumbarton, Scotland.—Sir, Linnet arrived safe, and I may say you have sent me a splendid specimen. He will take a lot of beating. I would advise anyone going to buy a Linnet to buy from an honest man like Matthews, Linnet King. Wishing you every success, W. Hardy. To Matthews, Bird Catcher."—Gentlemen, I could fill the page with testimonials, which I have open for inspection. Call and inspect my Linnet Buildings; everyhody is welcome. Birds all sent on seven days' approval at my own risk, cash or deposit. Buy first hand, and no fancy prices.—Matthews, Bird Catcher, 44, George-st., Hyde, Cheshire.

HARRY ALLEN.
Champion of all champions. My place was like a fair, as over 300 trippers from all parts paid me a visit during the holidays. Everyone was delighted to hear my birds, and congratulated me on having such good birds. I bave some big fine cock Linnets, well pencilled, stand well, fit for show, 2/6, 3/- each; extra picked birds, sure mulers, 3/6. Look up previous advertisements and see Sergeant Smith's record. Cock Linnets, singing beautifully, in a singing cage, with a packet of my special mixtnre and instructions how to feed, 4/- the lot; real bargains. House moulted Linnets, finger-tame, singing hard and every bird fit for show, 7/6, 8/6, 10/6 each, including cage; also a few real contest birds to sell, including the Sheffield contest winner and holder of the time singing record. Send stamped envelope for particulars of these marvellous birds. Canary and Linnet Mnles, singing bard and fit for show, 10/6 each; also a grand Yorkshire Canary, singing hard, 12/6; this bird has bred some beautiful Cinnamon youngsters, honestly worth double. I have the finest cock Goldfinch in Leeds, grand blaze, hars, huttons, etc., house moulted, will hite your fingers, guarantced to breed Mules, price 15/6. Showmen specially invited to see it. Four packets of my special mixture, 1/-. "74, Prince Albert-st., Glasgow. Dear Sir,—You might please keep me another young house moulted Linnet at 10/6; the one I had from you some time ago is doing well. I have him mated with a hen Canary. In fact, he is the best Linnet ever I had, so I am anxious to have another of your good birds.—W. Montgomery to H. Allen." I have hundreds of testimonials, as they come hy every post. All my birds are on seven days' approval, cash or deposit. Please give me a trial order, and you will never regret it.—Harry Allen, 42, Brown Hillcres., Harehills-lane, Leeds.

CURRENT PRICE LIST.

Read a few out of my Hundreds of unsolicited Testimonials received during this month, *all* of which can be inspected.

78, Woodfield-st., Morriston. May, 1907. The birds arrived in good condition, and I am very pleased with them. I did not expect to have such good birds, being so late in the season. Both hens have already paired and gone to nest, and nne has laid her first egg. Please send two more clear huff hens.—M. Bowen to W. Rudd.

West Quay, Port Glasgow. May, 1907.—The hen arrived safe, and I am highly pleased with her. If you had seen the one I had you could not have paired them better.—J. McMillan to W. Rudd.

Walthamstow, May, 1907.—Yorkshire cock arrived safe and gives every satisfaction. A very good bird for the price.—H. W. Burbidge to W. Rudd.

Chester, May, 1907.—I have approved of the Mule you sent. I am well satisfied. He is a good singer, and in the pink of condition.—S. Moor to W. Rudd.

43, Dalhousie-street, Glasgow. May 26th, 1907.—Please send a tin of Eggertine. I could not rear four youngsters with chopped egg as I am out all day, and it would always be turning sour, but I leave a supply of Eggertine in the morning and they are as right as the mail when I come home at night.—A. Ferguson to W. Rudd.

Hall Cottages, Leiston. May 25th, 1907.—Kindly send a hottle of Tonic Drops. I had very good luck with hirds. Four have hatched off, and are now as large as the old ones. I have five more eggs. Birds like Eggertine very much.—E. Bird to W. Rudd.

Manor Farm, Fleet. May 15th, 1907.—I thank you for sending Asthmarine. It has cured my birds. It did not do any good until I gave Asthmarine, now they have laid twn eggs.—H. English tn W. Rudd.

50, Pontefract-rd., Castleford. May, 1907.—I received Yorkshire cinnamon hen safe, and it gives every satisfaction. I will send to you again shortly.—E. Whitton to W. Rudd.

21 Hut, I. Lines, Curragh Camp, Co. Kildare. May, 1907.—I received the bird safe. I am very pleased with it. I think it a beauty at such a small price. Thanks very much.—J. Haley to W. Rudd.

8, Broad-st., Swindon. May, 1907.—I received the pair of Yorkshires quite safe. I am very pleased with them.—F. Porter to W. Rudd.

9, White Cross-row, Richmond. May 2nd, 1907.—I received the pair of Yorkshires safely. They are a heautiful pair, and arrived quite fresh. Allow me to thank you very much for them.—T. Harris to W. Rudd.

Brandesburton, Hull. May, 1907.—Birds arrived safe. I am highly satisfied. I have had three this year from you, and all, I think, are wonderfully cheap for the money.—R. Hall to W. Rudd.

Queen-st., Ballymena. May 23rd, 1907.—Dutch Frills safely to hand per express, arriving here at 9 a.m. from Larne. I am very well pleased with same.—J. Rennie to W. Rudd.

136, Cyfarthfa-st., Roath, Cardiff. May, 1907.—I received the pair all safe. They are nice birds, and I am very pleased. It is a pleasure to deal with you, as there is no waiting.—G. A. Oram to W. Rudd.

Pelican Boating House, Newbury. May, 1907.—The Canary arrived quite safe. No sooner was he in his cage than he began to sing lovely. I am quite pleased with him.—J. A. Johnson to W. Rudd.

Hatton Asylum, Warwick. May 9th, 1907.—I received the cage safe, and am very pleased with it. Whenever I want another I shall send to you for it.—J. Hiam to W. Rudd.

Barras House, 18, Marter-rd., Folkestone. May 9th, 1907.—The Bullfinch arrived quite safely. It is a beauty. I am also very pleased with the cage, which is marvellous for the price.—Mrs. Boswell to W. Rudd.

1, Robert-st., Jones-rd., Dublin. May 26th, 1907.—Birds arrived safe, and none the worse for their long journey. I thank you for such prompt attention. I am more than satisfied with them. I am glad I left it in your hands to select for me, for they are a splendid pair of birds. I hope to get you another order soon.—J. Williamson to W. Rudd.

All Amateurs should try my Special Matched Pairs of Prize-bred Norwich Plainheads at 12/6, 15/-, and 20/-. Crested ditto, 15/-, 20/-, 25/- and 30/-. Yorkshires, 12/6, 15/-, 20/-. Ready for immediate breeding.

ALL BIRDS ON APPROVAL.

"EGGERTINE."

It is the hest, purest, and greatest bone and muscle forming food ever known, as the analytical reports of most eminent authorities prove. It will bring hens into sound and robust condition for breeding as nothing else will. This during the past twenty years has been proved by thousands. It is a genuine egg food made with fresh laid English eggs, with white, of course, included (and NOT foreign preserved yolk of egg) with other valuable properties combined. Tins, post free, **1s. 3d.**; large size, **2s. 6d.** There is a saving in the larger size.

W. RUDD,

THE Bird Specialist,

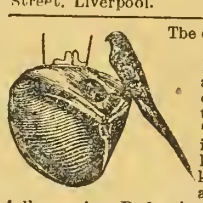
Real genuine African Greys with red tail, **20/-** and **25/-** each; these birds are thoroughly healthy and commencing to talk. Amazon Parrot, real beauty, **£3**, this bird is a capital talker, and can also imitate dogs, cats, fowls, etc. Splendid talking South African Grey, been in England 3 years, can say almost anything, most wonderful speaker, **£5 10s.** with cage. Parrot cages indestructible, brass top, nicely enamelled, **3/11** upwards. Trade supplied.

ADAMS, Park Place, Liverpool.

BOOKLET FREE.

FINEST Talking Parrots. I only deal in Parrots that will make first-class talkers; no rubbish. I am willing at all times to send my Parrots on four weeks' trial and three months' talking guarantee. Why? Because all my Parrots are young, strong, and reliable. My lifetime has been spent among grey Parrots, both at home and abroad. I guarantee every customer every satisfaction. Grey Parrots are my special fancy. I have trained them, know their wants, and can give every purchaser a bird that will please him in every way. I can supply grey talkers, not thinkers, that will say almost anything, at reasonable prices. Before you purchase a grey or green Parrot, send for my Booklet, entitled "Talking Parrots." All my birds are sent on four weeks' trial, at my risk. Send postcard for catalogue.—Mrs. Forster, Princes Park Aviaries, Violet Street, Liverpool.



Tbe only reason why "Cage Birds," "Feathered World," "Fur and Feather," "Exchange & Mart," and "Poultry," have all in their correspondence columns advised their readers to employ my **"IMPROVED SECURE" HUSKS** in preference to any other kind, is because these experts know they are infinitely superior and more reliable for successfully rearing Budgerigars. This is their opinion and the result of 16 years test and experience—not a few months. Surely all these Press Opinions are more convincing than a testimonial from any one man. Beware of new comers! They spring up every few years with a tremendous splash and disappointing statements, their rubbish quickly breaks up and falls to pieces, so if you have been ensnared and disappointed, **try my "Secure" Husks** which for 16 years have been first favourite. **4/6** dozen, smaller quantities **5d.** each. Few Cockateel nests boxes, **1/6** each. Illustrated pamphlet, entitled "Budgerigar Breeding," free on application.

HARPER, Upper Villiers Street, WOLVERHAMPTON.

PARROT PROBLEM

solved. For full proofs send postcard at once for my large book, "Parrot Prattle," now containing 168 pages. This is the most wonderful book ever offered free of all charge to all Parrot fanciers. (This "Parrot Prattle" is registered copyright, and all infringers and imitators will be proceeded against). It contains hundreds of testimonials from all parts with full names and addresses, many interesting facts, and gives valuable advice and hints to all parrot buyers. Full details of our original system of selling Parrots on four week's trial, at our risk, which we were the first to introduce. We sell Parrots of all descriptions on four weeks' trial, at our risk, before settlement. Cheapest and best in the Kingdom, and any Parrot sold by us, and not giving full satisfaction, will be exchanged any time within twelve months. Remember we lead and others try to follow. Write to other dealers as well as us, and judge for yourselves. Lists of Parrots for sale and above book post free on receipt of postcard.

THREE 1906 hen Canaries, nesting, 2/6 each, or three 6/9; healthy.—Nicholls, Aviaries, Whitstable.

EXCHANGE green Norwich hen, proved breeder, Canary's cage, for steady cock Goldie or Bullie.—S. Shew, 217, Bravington-rd., West Kilburn.

GOOD Norwich buff hen, ready to nest, will exchange for Yorkshire ben, or sell 5/-.—Meacock, Malta House, Harefield, Uxbridge.

FOR Sale breeder's stock, eight pairs high-class Norwich, single or pairs.—Connon, Hatton, Aberdeenshire.

EXCHANGE Canaries for Edison Bell phonograph, records, or anything useful.—Mackett, 198, Capstone-rd., Bournemouth.

EXCHANGE grand breeding Norwich Canaries for Yorkshire show cages and case.—W. Kay, Bootmaker, Hawkshead-st., Southport.

YELLOW Norwich cock, full song, and good cage, 8/6; or useful exchange.—Organ, 128, Magdalen-rd., Oxford.

A HIGH-CLASS pair of Norwich, 12/-; or exchange for Golden Lizards or Yorkshire Terrier.—W. Lanham, Derby-rd., Ripley, Derbyshire.

NICE steady Goldfinch, proved muler, and two Yorkshire hens, cheap, 10/- three.—Legget, 35, Cleveland-rd., Islington, London.

PAIR typical Norwich, breeding condition, 12/6; exchange British stock or show cages or offers.—Turner, 4, Southgate, Sleaford.

GRAND yellow pair of Norwich and three young ones, five weeks old, lot 20/-, exchange fowls or children's shoes.—N. Bennett, New John-st., Blackheath, Staffs.

PAIR Norwich, pair Rollers, one Crested hen, exchange Pomeranian bitch puppy, Toy bred, or maiden bitch, not over 6 lbs., no rubbish; approval.—Thomas McBride, 46, Elbom-lane, Old Cumnock.

VERY large typical yellow Norwich cock and big buff marked Norwich hen, bred from winners, 1906 birds, in the pink of breeding form, 13/-; or exchange 1906 Lancasbire cock or hen; approval.—Chemist, 203, Gloucester-rd., Bishopston, Bristol.

YELLOW green Crested hen, Barrett's and Joyce's strain, untried, 7/6; large yellow Norwich hen, 5/-; exchange both for good Crested cock above strain; approval.—F. Leonard, William-rd., Stapleford, Notts.

FOR Sale or exchange one variegated Crestbred cock, two Yorkshire buff cocks, one Norwich cock, one Yorkshire green hen, one cock Goldfinch, two Yorkshire hens, two double breeding cages, and three flight cages, good ½-plate lens required.—Morgan, 3, Victoria-rd., Darlington.

Mainly Foreign
To be Sold or Exchanged

PAIR Black African Owls, 30/-; exchange pair Rosellas.—Walter Lycett, Apedale View, Chesterton, Staffs.

LOVELY pair outdoor bred adult Budgerigars, in breeding condition, will exchange for pair breeding Canaries.—Roberts, Eirianfa, Conway.

Miscellaneous
Sale or Exchange

EXCHANGE pair black red Bantams for young hen Canary.—Selsby, Laxfield, Suffolk.

EXCHANGE large flight cage for good gaslight Roller or Linnet Mule.—35, Grey-st., Carlisle.

EXCHANGE iron bird rack for Canaries or Roller Organ.—Wilkinson, St. John's-st., Dudley.

PET Bonnet Monkey, on collar and chain, 35/-, or exchange.—Johnson, 28, Durning-rd., Liverpool.

CLEAR buff Norwich hen Canary, in good condition, 5/-; exchange.—Coles, Banks, Buckby.

EXCHANGE 90 bird papers for Norwich cock.—Dee, 27, Russell-st., Chester.

Advertisements continued on page 500.

Foreign Bird Queries continued from p. 494.

What Parrot?

Head, white; neck and breast, rose pink; wing, back, and tail, grey; when vexed it raises the feathers on the top of its head like a crest. What kind of Parrot is it? Will it talk? How must I feed and treat?—F.L.

F.L.—It is the Rose-breasted Cockatoo (*Cacatua roseicapilla*), a hardy and enduring species once it has got over the hardships of the voyage to this country. Some specimens of this species make good talkers, all talk a little if trained. Keep it where it will hear plenty of conversation; also try the constant repetition of such words and phrases that you wish it to repeat, not a number at once, but one at a time, and no change till this is learned. Diet: Canary, millet, oats, wheat, dari, and maize, in equal parts, well mix, and let this be your staple diet; also give ripe fruit, green food, grit, cuttlefish, plain biscuit, boiled potato, raw carrot, nuts, and water (note reply to other querists). Make your bird's drinking water quite saline with Epsom Salts for one day, and repeat as necessary to keep its bowels freely moving, yet not watery loose. It appears to me that either your bird is very wild or its cage very small for it to wound its wings as you describe. Avoid scaring it till it is thoroughly accustomed to you, and be as gentle and quiet in your movements when attending to its cage, etc., till it is tame. Hope it will do well.

Budgerigars Breeding in Cage.

(1) I have bought a pair of these birds, the cock is backward. Is my dietary correct, and do they require special treatment at this time? (2) Will they breed in a Crystal Palace cage, 3½ by 1½ by 3 ft. high?—NEW STARTER.

New Starter.—(1) Your diet is correct as to its variety, but at this period let them have as much grass in flower and cuttlefish as they will eat. It will do the male no harm if you caught it and gave it 2 drops of pure salad oil direct to the beak, and put them on a course of Parrish's Chemical Food, making their drinking water the colour of pale port with same for about a month. (2) There is no reason why they should not, but an all wire cage is not suitable for any birds, save to keep a few odd males in for decorative purposes principally, and under any conditions such a cage must not be placed in a window or where a draught can blow through it. The cage par excellence for captive birds is one of the semi-box type, in such they can obtain shelter from draught under almost any conditions, unless it be so placed that the wind blows directly into it. However, if you keep them out of draught they should ultimately settle down and breed in your C.P. aviary. They are hardy birds, and do not require artificial heat at any time.

Budgerigars Dropping Feathers.

I have had the birds three weeks, they appear in health, are very active, but dropping a lot of feathers; do they require any special treatment? They have made no attempt to nest; will they do so this season, or is it too late? Could I put one pair each of Madagascars, Javas, and Zebras in with them, or would it be better to have another pair of Budgerigars?—W.P.

W.P.—Your aviary should answer well for the birds. Give all the ventilation possible, but do not create a draught; some ventilation should be given at night now, that is the place should not be closed up entirely. They have not yet had sufficient time to settle down, neither are they yet in breeding condition, though the hen is rapidly becoming so. No, it is not too late, once they start these will go on well into the fall of the year bringing out their young. I cannot advise keeping Finches with Budgerigars and Lovebirds in so small an aviary. Why not have one pair each Green and Yellow Budgerigars and a pair of the Lovebirds; this would give you a pleasing variety, and they would stimulate one another in the effort to reproduce their kind. You will find several answers to other querists that should help you in the management of your birds. Your dietary is correct, but keep up a liberal supply of green food (grass in flower), cuttlefish, grit, and crushed egg shells from your table. Hope you will have good luck with them.

Blue-fronted Amazon III.

My bird has a sort of choking affection two or three times a day, worse after his meals; it only lasts from three to five minutes, during which he tries to be sick, makes a funny noise, then flaps his wings, and lifts up his feathers. Immediately afterwards he is all right again, laughs and talks, and is as lively as can be. What is the matter with it, and how shall I treat?—WALTER PEARSON.

Walter Pearson.—I am of the opinion that there is nothing the matter with your bird, and that the symptoms you name are those of its disgorging its food, which is common to many species of Parrots when they are with those they are fond of; it is usually accompanied by various noises, according to the species concerned, also wagging and contortions of neck and shaking loose of the feathers. I do not think it is more than this habit with your bird, as if it were either ulceration of mouth or throat, or dyspepsia, it would not be lively and talkative afterwards. Diet: For your staple food use the following mixture: Canary, millet, dari, wheat, Indian corn, hemp, and sunflower seeds in equal parts; also regular supplies of ripe fruit, green food, cuttlefish, and water. Supply as extras to vary the diet, plain biscuit, boiled potato, raw carrot, and a few nuts. If you are convinced there is some ailment you must write again at once, and try and give me a few more particulars—well examine the bird's mouth before writing again.

Grey Parrot with Growth, etc.

I treated my Grey (No. 1) as you advised, and the growth has now entirely disappeared. The other bird (No. 2) still eats its voidings when it can get at them, but closely wiring the grating, as you advised, has partially cured this. It is fed on boiled corn, potato, and fruit, with table bits. It will not eat dry seed yet. Can you help me further with this bird?—PERPLEXED.

Perplexed.—(1) Am glad to note that the treatment was successful, and that the bird is now quite well again. (2) The only thing you can do re this objectionable habit is to remove any voidings that cling to the grating as soon as possible. As regards its diet, keep to that advised in our earlier reply, and given again to other correspondents in this issue. Do not give table scraps, tea sops, or anything of that kind. The green food you are giving is very wholesome, as is also such ripe fruit as you can get it to eat. The Parrish's Chemical Food will also do good. Try this method: Half fill its tin with the dry mixture, fill up with boiled maize, and give no more for the day so long as there is any food in the tin; keep up this practice for a time and note the result. Of course the above only applies to the boiled maize and seed mixture—you will supply ripe fruit, etc., as usual. Keep its bowels moving freely, but not watery loose, by giving Dinneford's Magnesia as necessary. I should keep a piece of cuttlefish hanging in the cage, ultimately it will take to it., Mix a little Parrot grit with its seed mixture.

CLUB REPORTS.

WIBSEY AND DIS. C.B.S.

Held a very successful supper on May 11th. About forty fanciers and friends sat down to an excellent meat pie. After supper a very good programme of songs and pianoforte selections was rendered by various friends, and during the evening six new members were passed (this brings up the membership to 37, which is an increase of 15 on last year).

E. W. JOHNSON, Sec.

CITY OF WAKEFIELD O.S.

Meeting held May 14th, Mr. S. Sheard in chair. The Secretaries read letter from C.B.U. granting licence for show on November 12th and 13th. The show dates are altered accordingly. Then came a paper on "The Roller Canary," by Mr. J. Netherwood, secretary Wakefield Roller C.S. Last year he captured the silver cup (at the Palace) of British Roller C.C. His paper dwelt on the keeping, feeding, and training of the Roller Canary. He laid special stress on the fact that Roller Canaries were like other varieties in this respect—"To get a good bird you must pay a good price."

W. D. KEELEY, Hon. Sec.

EALING AND HANWELL F.S.

Meeting held May 23rd, Mr. Councillor Smales in chair. Mr. H. Knight judged, and gave satisfaction to all. CLEAR, ETC., YORKS.: 1, 3, vhc, Smith; 2, hc, Robinson. MARKED, ETC.: 1, 2, 3, hc, Robinson; vhc, Smith. NORWICH: 1, Thursby; 2, 3, Robinson. BRITISH: 1, spl best bird in show (kindly given by Mr. Daintry), Thursby, a Goldfinch; 2, Smith; 3, vhc, hc, Robinson. MULES: 1, Robinson. FOREIGN: 1, Smith. After judging, Mr. Knight proceeded with his lecture on the Yorkshire Canary, his audience following with keen interest. The various points raised by Mr. Knight as to the best means to employ to keep up size, maintaining and improving quality and colour, brought on a good and lively discussion, in which Messrs. Smales, Robinson, Kemble, Smith, Hetherington, and others joined in. A hearty vote of thanks was accorded to Mr. Knight for attending and helping the members with his advice and interesting lecture.

W. BIRD, Hon. Sec.

CITY OF GLASGOW O.A.

Committee meeting May 16th. Mr. J. Young presided. It was carried that the general meeting be held on June 15th. It was agreed that the classification be taken first, the election of judges next, and other business afterwards. A motion was made that if a member moved that a new class be added to the classification, he be not asked to guarantee the class. This motion led to a long and warm discussion, but ultimately the previous question was moved and carried. It was carried that the election of judges be carried out as formerly. Then the question of voting by proxy was taken up. It was carried that everyone sending membership fee of 2s. 6d. on or before June 15th be entitled to nominate and vote for the election of judges. This did not satisfy a prominent member present, and he proposed that the judges be nominated now by the committee, and ballot papers be issued, and everyone returning said papers with the membership fee of 2s. 6d. vote on the nominees of their choice. This led to a long and somewhat heated argument, but the chairman intimated that the motion was incompetent, and the question dropped. The president read a letter from the Glasgow and West of Scotland Association, asking that the "McLean" Cup be returned to them in terms of the original conditions of the donor, and it was agreed that the Cup would be banded over on the production of proof that they were entitled to it. It was carried that the show be advertised in the fanciers' papers to the extent entitling their show into Coming Events column.

A. MCDONALD, Sec.

B.B. & M. CLUB FOR BRADFORD AND COUNTY OF YORKSHIRE.

A meeting, convened by Mr. H. J. Chittenden, was held on May 25th at the Market Tavern, Bradford, to see if it was possible to form a club for the furtherance of the interests of British bird fanciers in Bradford and Yorkshire generally. A goodly number turned up, and amongst the company were Mr. W. A. Cowgill, Mr. W. H. Shackleton, Mr. Fred Hammond (Sec. Yorkshire Union), Mr. Sam Dean, Mr. T. Clegg, Mr. R. Sutcliffe (Baildon), Mr. J. S. Clarkson (Halifax), Mr. Phillip Mason (Windhill), Mr. A. Dobson (Saltaire), Mr. T. H. Inman, Mr. H. Simmonett, Mr. W. Sleaford, and others. Mr. W. A. Cowgill was voted to the chair. Mr. Chittenden, in a few well chosen remarks, put the object of the meeting, and said he would like to see a club formed for the purpose of assisting those who kept a few British birds, and also those of the Canary cult who during the season perhaps bred a few Mules. He would like, if it were possible, to throw it open to the whole of Yorkshire, as at present there was no such society for British bird fanciers. The Chairman also spoke, and instanced the benefits which would accrue if classes were provided at our shows for British birds and Mules, and how interesting it would be. He thought a small subscription from each fancier would enable them to put the club, if formed, on a sound footing, so that specials may be given and classes guaranteed for British birds and Mules.—Mr. F. Hammond said he had great pleasure in proposing that: "A club be formed for encouraging British birds and Hybrids." Mr. W. R. Myers, in seconding Mr. Hammond's proposal, showed that much interest was taken in the surrounding districts in British birds, and if they had a classification bow interesting it would be for visitors to shows. On the motion being put to the meeting, it was carried with acclamation. Mr. Sam Dean proposed, and was seconded by Mr. J. Hartley, that this society be called "The Bradford and County British Bird and Mule Club," which was passed without a dissentient voice. Mr. Dean expressed a wish that this society would not operate locally only, but would enrol members from all parts of our largest county. Mr. Hammond proposed, and Mr. Greaves seconded Mr. W. R. Myers as secretary pro tem. The following gentlemen were elected as officers:—President, Mr. W. A. Cowgill; vice-presidents, Messrs. Sam Dean and H. J. Chittenden; committee, Messrs. T. H. Inman, Phillip Mason, Fred Tyler, Chas. Ross, H. Midgley, W. Sleaford. After much discussion, the amount of subscription was fixed (provisionally to the minute being ratified at the next meeting) at 1s. per annum. Twenty-one gentlemen gave their names as members of Bradford and County British Bird and Mule Club. Great Horton O.S., who are holding their First Feather Show on June 8th, and Bradford West on June 22nd, have put on an open class for any variety of British bird (limit £10). It is hoped that British bird fanciers will rally round and give these shows their support, and that entries will come in not only from Bradford and District, but from afar. Schedule for both these shows can be had from me on application. It was decided to hold the next meeting at Bradford West First Feather Show, in Whitley-lane Schools, June 22nd, at 7 p.m.

W. R. MYERS, Sec. pro tem.
23, Ingleby-place, Bradford.

SEND FOR

Cage Birds = Annual =

And you will be delighted beyond expression at the value received.

Never was the bird keeper better catered for in respect of birdy literature than he is to-day, and nowhere can you find a handier, more practical, or complete guide to the hobby of cage bird keeping than I offer in CAGE BIRDS ANNUAL.

Listen to this conversation between a beginner and our publisher:—

Publisher.—Take one of our ANNUALS, Sir?

Beginner.—Will it tell me if there's a club in my district?

Publisher.—Yes. Here is a complete list of clubs, the names and addresses of the secretaries, fees, etc.

Beginner.—Yes; that's all right, but if there's something I can't understand—some technical term, for instance, will it explain that?

Publisher.—That's just where its value comes in. See the Glossary of Fanciers' Terms.

Beginner.—By George, that's handy! Will it also tell me how to breed Canaries?

Publisher.—Certainly! And also how to breed Mules and Hybrids. There is also a chapter on keeping a pet bird, and a most useful article by Mr. Sam Drake on "Rearing Young Canaries."

Beginner.—But suppose any of my birds become ill. Where shall I find this ANNUAL come in then?

Publisher.—Just where you want it, Sir. The chapter on diseases is arranged in alphabetical order, and is most comprehensive in character.

Beginner.—It certainly seems a valuable idea.

Publisher.—Valuable! It's worth its weight in gold. Why look here, Sir, in addition there's a chapter on "How to Identify the Call Notes and Song of British Birds," a review of the exhibition year, a breeding register, a show record, a cash account, a list of cage bird judges' names and addresses, a list of the bird trade, a list of breeders and exhibitors——

Beginner.—Stop! stop! man; give me a dozen copies. I'll take them away and distribute them to friends as a public duty. However it's done for the price I can't see. Look here, pack up every blessed book you publish, and let me know how much you want from me.

Publisher.—Thank you, Sir; always ready to oblige. You see, we publish our ANNUAL as an advertisement.

7½d. POST FREE FROM THE PUBLISHER, 7½d.

F. CARL,

JUDGES OF CAGE BIRDS.

The attention of Show Secretaries is directed to the following list of gentlemen willing to act as Judges. Terms for insertion on application.

H. W. AXE, 55, Market Place, Doncaster. Judge of Canaries and other Cage Birds. Practical experience (Norwich and British speciality).

W. O BARLOW, The Aviaries, Malpas, Cheshire. Judge of Canaries, British Birds and Mules. Terms moderate

J. C. BARNES, 149, Duncombe Street, Walkley, Sheffield. Judge of Canaries and Cage Birds. Long practical experience. Terms moderate.

W. P. BARNES, Judge of Canaries and Cage Birds. Life practical experience. Breeder and exhibitor. Reporter for Fancy Press. Commercial Road, Grantham.

GEO. BENNETT, 46, Wenlock Street, Luton, Beds. Judge of Canaries and Cage Birds. Thirty years' experience. Terms moderate.

J. BERTIE, 7, Mitchell-st., Nottingham, Judge of Canaries and Cage Birds; all classes; 30 years' practical experience.

W. A. COWGILL, 115, Washington Street, Girlington, Bradford. Judge of Canaries and Cage Birds. Over twenty years' experience. Terms moderate.

A. C. DAVIS, Judge of all Classes of Cage Birds. Long practical experience. Terms moderate. 110, Tib Street, Manchester.

T. DIXON, Pioneer Terrace, Bedlington Station Northumberland. Judge of Canaries and Cage Birds. Life experience.

J. DOBSON, 14, East Road, London, N. Judge of Canaries and Cage Birds.

J. W. DRIVER, (Adnitt & Driver), Gladstone Street, South Normanton, Alfreton. Judge of Cage Birds.

GEO. GARDNER, 11, Haverstock Road, London, N.W. Judge of all kinds of Cage Birds.

C. A. HOUSE, 82, Upper Walthamstow Road, Walthamstow. Judge of Canaries, Mules, British and Foreign Birds.

E. A. LOVELL, 19, Islington Road, Southville, Bristol. Judge of Cage Birds (all varieties). Life experience.

F. MARWOOD, 1, Barnard Street, Thornaby-on-Tees, Mules, British and Foreign, a Speciality. 17 years exhibitor. Terms moderate.

W. R. MILES, The Aviaries, Chichester. Judge of Canaries and Cage Birds. Life experience.

W. MUNDELL, 6, Carlisle Place, Bradford. Judge of Canaries and Cage Birds.

J. NORTH, 435, Oxford Road, Reading. Canaries, British and Foreign Birds. Author of "The Common Sense of Canary Rearing."

J. PATTERSON, Chirnside. Judge of Cage Birds. All varieties. Wide practical experience. Specialist Border Fancy Judge.

J. H. PAYNE, 17, Northgate Street, Gloucester. Judge of Canaries, British and Foreign Cage Birds.

PARKER ROBINSON, N.B.B. & M. Club, 1, Back Hartington Street South, Barrow-in-Furness. Cage Birds, all Varieties.

J. H. ROE, 167, Clarence Rd., Derby. Judge of Canaries and Cage Birds. Twenty years' practical experience.

WILLIAM J. ROSS, 19, Haulgh Road, Inverness, N.B. Judge of Pigeons, Canaries and Cage Birds. All varieties. Life experience.

C. E. SILK, The Aviaries, Emsworth, Hants. Judge of Canaries and all Cage Birds. Life experience.

HENRY TAMS, Orchard Place, Longton, Staffs. Judge of Canaries, British and Foreign Birds. Twenty-five years Breeder and Exhibitor.

R. B. TOPE, Hoe Street, Plymouth. Judge of Cage Birds, Rabbits, Cats, and Cavies. Twenty-five years' experience.

J. WILCOCK, 14, Chapel Street, Eccleshill, near Bradford, Yorkshire. Judge of Canaries and Cage Birds. 25 years Breeder and Exhibitor leading shows.

J. C. WILMOT, 17, Sandhurst Road, Bedford. Judge of Canaries & British Birds. Thirty years' experience

THE CAGE BIRD UNION.

The Question of the Hour.

The Five Definitions of a Novice.

Appended are the five definitions of a Novice being voted on by societies which are affiliated to the C.B.U., it being intended that the definition receiving the largest total of votes shall govern all open shows held under C.B.U. rules:

1. A Novice is one who has never won a 1st, 2nd, or 3rd prize in Open or Amateur Classes, or three first prizes in Novice Classes for Canaries or Hybrids.

2. A Novice is one who has not won a prize at any Open Show. All birds shown in Novice Clases shall be their own breeding and breeding stock.

3. A Novice is one who has never won a 1st prize in Open Competition, or three first prizes in Open Novice Classes.

4. A Novice is one who has never won a 1st in Open Competition, or three 1st prizes in Novice Classes at three separate Shows.

5. A Novice is one who has never won three 1st prizes in Open Novice, Open Amateur, or Champion Classes.

All these definitions are presumed to apply to Canary and Hybrid Classes only.

Dulwich and Peckham C.B.S.

A specially-convened meeting, held May 23rd, to discuss proposed deletion of the latter part of Rule 17, and suggestions for the definition of a novice. Speeial notice had been sent to members with voting papers, to be returned by those who could not attend meeting. It is to be regretted that a larger number did not return same. Mr. G. T. Woolhouse was elected to the chair. A very lively discussion took place, and opinions seemed fairly divided; but upon the votes being counted, it was found that 22 had voted that the latter part of Rule 17 be deleted, and 14 that the whole of the rule stand. Mr. Lovsey and Mr. Cranfield acted as scrutineers. With regard to the novice question, it was found that suggestion No. 3 found most favour. Mr. Johnson suggested that it would he better if it read—"or three 1st prizes in open novice classes at three separate shows." The Secretary was instructed to forward this suggestion to Mr. Lythgoe.—W. Hodson, Hon. Sec.

Suggested Extra Entrance Fee for Non-Members.

At Sunderland, on May 23rd, the Northern Crest Club met to discuss C.B.U. Rule 17 and definition of a novice. There was a poor muster of members, owing to the wet night and also a meeting at Newcastle. In Mr. Robt. Swan's absence, Mr. A. Brown, of Gateshead, was voted to the chair. The minutes of last meeting were read, and after rescinding the minute relating to members sending the numbers of their birds, competing at shows, to the Sec., they were adopted. It was decided to enter "N.C.C." on entry form as before. Rule 17 next came up for discussion, and with the exception of the Hon. Sec., those present thought it hardly fair to give the non-union fanciers the advantage, insomuch as they could show at any open show, while a union man could only show at exhibitious under C.B.U. rules. It was decided to reply "No" to the question; hut the Sec. was instructed to write to Mr. Lythgoe to the effect that if the rule could be altered to make all exhibitors of cage birds members of the Union, the N.C.C. would then be in favour of it. One member suggested that twopence extra entry fee could he charged at shows to non-members of the Union, and forwarded to the Secretary, Mr. T. Robson proposed that the rule stand, and said it was also unfair that societies that did not join the Union should reap the benefit equally with those who did, and that if it stood all societies would join for the sake of support. There was no seconder. No. 2 novice definition was chosen. The Sec. had an offer of a medal from Mr. Goulden for novices, whieh it was decided to accept, and the members present guaranteed the class, so that it would be put on at Sunderland.—T. Robson, Hon. Sec.

Mr. John Tyson Replies.

Sir,—Firstly, I would respectfully request all affiliated societies to exercise great caution with regard to their voting on Rule 17, or they may vote for the retention of the whole rule when intendiug the deletion—like some one I know who said "yes," when he should have written "no." I should like to know if all last year's affiliated societies agreed to remain affiliated this year? Have societies been requested to elect their delegates for this year? It is quite possible other members might be substituted. And if the last year's delegates have been re-elected, has the Secretary of the C.B.U. been advised? I have before me a list of delegates from whom I am requested to elect a representative on the Executive Council, and I know one society has definitely decided not to again affiliate; and if rumour is correct it is highly probable another or two will follow. Under such circumstances, is not the voting futile? The injustice of the voting is by no means imaginary. Call it a delegate or society, whichever you like, the method is the same. All I ask is that the voting of each affiliated society be taken—so many for and so many against—and the whole of them submitted to Mr. Lythgoe, or, perhaps better, a scrutineer (the same as the election of president and secretary), and I take it every affiliated member would be agreeable to abide by such a decision. This is the spirit of the resolution which was, I understand, carried at the Crystal Palace. I think it is quite possible a few calm and collected gentlemen might be able to grasp the decision quite as readily as the officials, if the account of the chaos and confusion is any criterion. Why are the delegates of societies not apprised of anything pertaining to their particular society? They are the representatives, and not the societies, and I think it is their duty to call meetings to discuss any subject or arrange with the society to do so. As I have previously said, the office of a delegate is a myth, and nothing more nor less thau a dose of soothing syrup to make it appear that each society is represented. Even an ordinary affiliated member can be deputed to attend a show on behalf of the Union. Therefore, what need of allowing delegates' expenses for over five miles? Is it not true that a delegate can, and has been, deputed to police his own show? Can anything more ridiculous be imagined, if correct? I think Mr. Lythgoe would have been well advised in giving delegates' travelling expenses as a separate item in the balance-sheet, instead of coupling them with those of the Executive Council. I know of several shows in London who never had a delegate appointed to supervise at all.

Am sorry my letter respecting voting did not appear clear to Mr. Stephenson, but I hardly think he should have said it was misleading, if he personally was unable to grasp it. However, I will try if possible to make it clear, and will imagine the L. and P.O.S. voting was in favour of the latter portion of Rule 17 standing hy 17 to eight against, and the L.C.B.A. voted 18 against and four for its retention. Total those members together (if possible), and let the largest number decide the question—i.e., 21 for retention and 26 against—and pursue this method through the whole of the affiliated societies. What is there misleading in this? And surely the method is clear? Yorkshire men, as a rule, do not require such an explicit explanation. I have been trying for some time to ascertain the power of a delegate. (Good old Mother Leigh!) Quite so; but what are you to do when decisions are required before a delegate has the opportunity of discussing the questions with his members? Why has Mr. Lythgoe had to extend this voting till June 8th? And this is not by any means the first time an extension was necessary. What of the annual general meeting? Even with this extension, the L.C.B.A. would not have been able to discuss the questions except at a special meetiug (and which was duly called) for the purpose. It amuses me highly to think that Mr. Stephenson should see fit to mention several of the things I had in my mind at the Manchester meeting (and still have). They evidently appealed to him, but not to the C.B.U; and, so far as I am aware, none have been attempted. What has the C.B.U. done? Committed one exhibitor without giving him a hearing, and upheld a judge while, at the same time, exenerating the exhibitors! And what have these two items cost? I feel free to admit there would not have been so mnch cause for dissatisfaction if any of the items Mr. Stephenson mentions had ever been attempted.

From the first I have been against several of the methods of the C.B.U. Firstly, I objected to the composition of the provisional committee. I believe I am correct in saying seven were appointed within very easy reach of Manchester—in the hollow of the hand, as it were—two for London (I previously said one was sufficient), and two were appointed without even their respective societies being sufficiently interested to write and compliment its possible formation. I'll give you my word that so long as I remain the delegate of an affiliated society I shall "continue to play," notwithstanding Mr. Stephenson's school-children illustration, which clearly goes to prove that he has not lived sufficiently long to forget the methods extended to him.

Of what value are the C.B.U. rules? I am sorry to repeat this contentious portion of Rule 17: "And registered members of the Union shall be liable to suspension if found exhibitiug at a suspended or non-affiliated or non-licensed club's show other than First Feather Show or Shows confined to members." Yet at our special meeting one of the provisional committee, Mr. R. J. Pretty, said that Mr. Lythgoe had written and given him and several others permission to exhibit at Watford (which was an open show, neither affiliated or licensed) because they were members, although the classes in which they exhibited were not confined to members. Is this the correct definition? Again, on principle, I withheld payment of 3s. 9d. for show rules (which, however, has uow been paid), and this amount was laid before the Executive Council as an outstanding debt without my knowledge, and, consequently, without being able to state my case. I was prepared to bring the matter before the general meeting at the Palace, and had my letters and schedules, etc., necessary for the substantiation of my case; but the meeting was concluded before I could attend. I wrote asking Mr. Lythgoe what he proposed doing with those societies that announced their show being held uuder C.B.U. rules, but failed to conform to one of its chief conditions (printed in large and black type)—viz., to send a copy of the rules with every schedule. He wrote me that he proposed doing uothing with them, and on this ground I withheld payment as a protest, and with the hope that my course would lead to the exposure of the injustice of many societies having to pay for conforming to conditions, while others were set free for non-compliance.

Now, Mr. Crawhall, the Fancy I think will agree that you appear to have a very bad case, and I need trouble very little about what you have written, as you either know nothing of your subject, or have been grossly mis-informed. Wonderful example, Birmingham; I understand carried by the casting vote of the chairman. Differences of opinion appear to be very evenly divided. I did hear that Hartlepool was carried in the same way, but cannot find that verified in the Fancy Press. Speaking of Birmingham, I refer merely to the scant number who voted. I imagine it would be much more interesting if we had the opinion of the majority, who apparently treat the C.B.U. with a chilly indifference. I challenge Mr. Crawhall or Mr. Stephenson to bring forward anything I have written or said to prove that I have in any way courted office in the C.B.U.

John Tyson.

THE SOUTHERN NORWICH PLAINHEAD CLUB AND C.B.U. MATTERS.

At the last meeting of the S.N.P.C., held at the "Raglan," Aldersgate Street, E.C., on May 23rd, there was only a poor attendance of members. Mr. R. J. Pretty was elected to the chair. The first business was the consideration of the deletion or otherwise of the famous barring clause of Rule 17 of the Cage Bird Union, this matter having been turned over from the previous committee meeting, owing to the paucity of committeemen present thereat. It was soon disposed of, Mr. R. L. Crisp moving, and Mr. A. W. Curtis seconding, that it be referred to tho whole of the members to vote upon. After a few words of protest from the Secretary on the score of the expense involved, this proposition was carried hy three votes to one.

A discussion then followed, on the initiation of Mr. Curtis, as to forwarding a recommendation to the C.B.U. Secretary, appealing to him to allow of further time between sending out his circulars on matters requiring a delegate's decision, to allow of the said delegate consulting his members before giving his vote on whatever points were raised. Mr. Curtis considered an interval of at least a month should be provided for between the receipt of the circular and the day for posting the reply. Mr. Ramsden pointed out that the revision of Rule 17 had been before the Fancy since the February Palace Show, so that every society had surely had ample time to consider it. Mr. Curtis said he was not referring to Rule 17, but to the election of the members of the Executive Council from amongst the delegates. Mr. Ramsden said that that point had been before the Fancy for a year, for it was well kuown that the Executive were to he elected annually. Further, he did not see the necessity for a delegate to consult his members on the point, as it was well understood that the delegates were themselves to elect one of their number to represent their centre on the Executive Council. The Chairman also thought this a matter for the delegates to settle amongst themselves. Mr. Curtis stuck to his point on principle, saying he thought there would be far less grumbling if more work were thrown on the members of societies, for no one could then style it cliqueism. The election of the Executive Council he considered of prime importance, and he, if left to himself, might conceivably vote for a fellow-delegate to whom 75 per cent. of his members objected to. Mr. Crisp seconded the recommendation, saying he thought at least five weeks' time should be given delegates in which to send in their decisions, to allow them to consult their members. On being put to the vote it was carried by four votes to nil.

Mr. Ramsden then raised the point that the S.N.P.C. delegate, Mr. G. Crabb, ought to be instructed by that meeting whom he was to vote for. This was demurred to by several present, who thought Mr. Crabb, having been elected by and carrying the confidence of the members, should he left to vote as he pleased. Mr. Ramsden eventually moved a resolution that Mr. Crabb be left to vote for whom he pleased. Mr. L. Brown seconded, and Mr. Crisp supported it on this occasion, as the time was limited for sending in the vote, and it was carried unanimously.

THE LONDON CAGE BIRD ASSOCIATION.

There was an excellent gathering at the special meeting of the L.C.B.A., called for May 24th last, at the Napier, High Holborn, W.C., a number of friends mingling with the members. Tho business forward was the discussion on Rule 17 of the C.B.U., and that body's definition of a novice. The novice question as it affected the metropolitan district was also discussed, and this part of the proceedings is reported elsewhere in this issue. Mr. J. Dewhurst ably filled the position of chairman during the first part of the proceedings.

Mr. R. L. Crisp moved that the latter portion of Rule 17 be deleted (i.e., that portion which reads "registered members of the Union shall be liable to suspension if found exhibiting at a suspended or non-affiliated or non-licensed club's show, other than first feather shows and shows confined to members"). This proposition was seconded by Mr. A. W. Curtis. Mr. Crisp expressed himself as strongly opposed to coercive measures being introduced into the Fancy, for they deprived a man of one of the privileges of citizenship, the right to act and do as he thought best. Besides, such coercion as was exerted by Rule 17 ought not to be necessary, for if the C.B.U. was the good thiug it was said to he fanciers and societies would support it without being compelled to do so. He believed in governing by love rather than hy force. He took exception to the wording of the circular sent out hy the C.B.U. Secretary, it being altogether one-sided, and nothing more nor less than an attempt to bias readers of it in favour of the rule. Further, the question was sent out in a misleading manner. The circular asked:—Is your Society in favour of the whole of Rule 17 being retained? Then it went on to say:—The words proposed to be deleted are, etc., etc. When a man read this, he was quite likely to write Yes at the foot, meaning he was in favour of the words printed being deleted. But the "Yes," being read in conjunction with the question, left it as though he had voted for the whole of the rule being retained. He thought many were likely to fall into this error, and thought this ambiguousness should certainly have been avoided. He also considered the clause of Rule 17 under discussion to be most unfair to members of the Union, inasmuch as it allowed non-members to come to Union shows and take whatever prize-money they could, while members of the C.B.U. could not go to non-Union Shows and take any prize money there. The clause should either be done away with altogether, or all exhibitors should be compelled to join the C.B.U., so that all of them might he on an equal footing. As it stood at present Rule 17 was neither just nor equitable.

Mr. Curtis endorsed Mr. Crisp's remarks in the main, not agreeing with the manner in which the vote had been put before the various societies, and also being opposed to coercion on principle. Further, he objected strongly to the one-sidedness of the harring clause contained in the Rule.

Mr. A. C. Burn said that while the way the vote had been taken was not a democratic one, he was heartily in favour of Rule 17. Mr. Crisp had said that it touched his citizenship; personally, he could not see that. All rules were more or less coercive, even those of their own Society. Yet the coercion existed only to be used when necessary. Even some of the country's laws he disapproved of; yet he was forced to recognise that they were absolutely necessary. If one did not break them, however, one did not come under them. The C.B.U. was an organised body established for the good of the Fancy, and they ought to have a rule compelling all fanciers to belong to it, and so come under its authority. Take Rule 17 away, and you took away the bed rock of the Union. Mr. Crisp had spoken of love as the controlling force. Well, love had proved insufficient in the past; it had not prevented wrong-doing. They would make a mistake to delete any portion of the rule. It was necessary in the best interests of the Fancy, to work for its purification, and to establish the Union on a proper basis. He recognised there were things in the Union which needed altering; but they must remember it was yet in its infancy, and that it would take several years' working to properly mould it.

Mr. Stevenson said the Rule simply encouraged the fancier who did not belong to the Union—he could show anywhere, whereas the members of the C.B.U. could not. Mr. Burns: That's what I disagree with. Mr. Crisp: That's what I disagree with, too. Non-affiliated members can take our prize money; we can't trespass on their preserves. Last year I bred

some birds I considered fit to send into Yorkshire to compete. I got a schedule, only to find that my membership of the C.B.U. debarred me from showing them. Those who floated the C.B.U. are afraid their orphan will not exist without coercion.

Mr. Burns repeated that he was in full agreement with Rule 17. The sole object for which the Union was formed was the betterment and improvement of the Fancy, and therefore they should compel all fanciers and societies to become affiliated, so that the governing body could exercise control over them whenever necessary. Why should anyone wish to stay outside of such a body? If we want them to come in we must coerce them. "Coercion" such as this applied to all kinds of Unions and to many branches of sport. The football union would neither permit the clubs forming it playing unregistered clubs, nor the players to play for such.

A speaker, whose name escaped us, said he looked upon the L.C.B.A. as the head of the Fancy in London, as a body composed of honourable men, capable of conducting their business in an honourable way, and he felt sure they would expel anyone who did wrong. He thought it absurd they should not conduct their business in their own way. He failed to see the goodness of the C.B.U.

Mr. Crisp pressed his point as regards non-affiliated members showing where affiliated members were not allowed to do. Mr. Tyson then rose and pointed out that at the initiation of the C.B.U. it was proposed to debar non-affiliated fanciers from showing at Union shows. But Mr. Ramsden said that if that were carried the L. and P.O.S., his Society, could not join them, on account of the Crystal Palace Show. He set his back to the wall, and so that part was struck out. He himself held that if the latter portion of Rule 17 were to stand at all, it should be added to. If the barring were enforced it would, of course, make a big difference to some open shows, at least at first, and that was the reason Mr. Ramsden had to adopt the attitude he did. He objected to the way the Rule was being voted on. Let every member of a society have a voice on the point, and not the delegates alone, and then, if the barring clause were retained by a majority of the whole membership of the Union, they (the L.C.B.A.) were quite prepared to adopt it. No fair-minded body of men would, he felt sure, wish to do otherwise.

Mr. Crisp: We must all admire Mr. Ramsden; he is the strong man of the Union—the only bright star on the dark horizon. He knows what he wants, and sees that he gets it.

Mr. Curtis: At the meeting at the Palace, immediately Mr. Ramsden found that the majority were against holding to the latter portion of Rule 17, he got up and contended that that meeting was not properly constituted to deal with the matter, and endeavoured to squash its consideration. He had said that if the barring clause were extended the Palace authorities could no longer accept the C.B.U. rules under which to run the National Show—that it could no longer be held at the Palace. Mr. Ramsden raised no objection until they began to tread on his favourite corn.

Mr. Dewhurst (the Chairman) interposed to say that he understood the Palace authorities said there were many people residing round about the Palace who must show, as they had supported their show for many years.

Mr. Curtis: Isn't it possible to shift the venue of the great National Show from the Palace? We have other halls in London quite as good. I would suggest Olympia.

The Chairman ruled this matter out of order.

AN IMPORTANT POINT.

Mr. C. H. Cooper rose and enquired whether, as an affiliated L.C.B.A. member, he could exhibit at the show of another society of which he was also a member, but which was not affiliated, and whose show was not licensed? Mr. Crisp replied that he could not do so.

Mr. R. J. Pretty, however, rose and said that he could, and, further, he could show in the open classes. He gave Mr. Lythgoe as his authority for the statement, and instanced the case of the West Herts Fanciers' Association, which held a mixed show last season and gave a few cage bird classes. No license was taken out, and the Association was not affiliated to the C.B.U. Members of the Watford C.B.S., who were also members of West Herts F.A., exhibited at the latter's show in the open classes, after bringing the facts to the knowledge of the C.B.U. Secretary, and obtaining his assurance that they could do so. As regards Rule 17, he was against any alteration of it. He pointed out that if it was upheld, it became practically impossible for any show to be a success unless it held a C.B.U. license, consequently there would be very few fixtures C.B.U. members could not send to.

Mr. Curtis said that if the facts as stated by Mr. Pretty were correct, the action of the C.B.U. Secretary was directly contrary to rule as he and others read it. If Mr. Lythgoe placed that construction on it, all fanciers should be made acquainted with it. Possibly, however, he only acted in accordance with the statement made at a delegate meeting, that Rule 17 would not be strictly enforced last season.

Mr. Tyson said he was sure the majority did not understand it in the light set out by Mr. Pretty, and Mr. Crisp remarked that if the interpretation they had heard from Mr. Pretty were correct, it undoubtedly took much of the sting out of the rule.

Mr. Burn suggested the C.B.U. Secretary be written to on the point. He said he could see no rule to admit it being done, neither could he see any rule to squash it. There ought to be a rule to bring it into effect, and he would suggest they send in this addition to the next annual general meeting.

Mr. Crisp moved that the question be now put, and on a vote the proposed deletion of the latter portion of Rule 17 was carried by 18 votes to four. Several present were thus, apparently, content to "sit on the fence."

The next business was the selection of a definition of a Novice to govern all open shows. Mr. Tyson moved that definition No. 4 be recommended for adoption. He considered this allowed plenty of scope for the novice, who did not want restricting unnecessarily; otherwise the Fancy generally would suffer.

Mr. Stevenson seconded this, and Mr. Curtis supported. The latter gentleman said he considered definition 4 the most favourable. It retained fanciers in the novice ranks for a fair time, and gave them as much scope as possible before compelling them to compete among the champions. Some definitions were rather hard, compelling him to go up on winning his first 1st prize. The novice should have every consideration, educating him in the Fancy.

Mr. Burn thought they were going too fast, and that the Union was not in a position to sustain a universal definition of a novice. They did not know the minds of all affiliated societies, which should all be invited to discuss the question and submit what they considered the best definition, the latter then to be all voted upon at the next annual general meeting.

Mr. Cooper (Cooper Bros.) said he considered there were sufficient definitions of a novice on the paper before them to satisfy any society. He doubted whether they could get any better. Mr. J. S. Clarke rose and submitted that they were flattering the C.B.U. by considering them at all. The antics of those on the Council were enough to make anyone's gorge rise. Why not ask them to define when a guarantee was not a guarantee?

Mr. Curtis appealed to the meeting to come to a decision. He said they must all be heartily tired of the novice question, and it was high time it was settled. They had already spent two and a half hours discussing it at the Palace, only to leave it exactly where it was.

On a vote being taken, it was found the meeting was unanimously in favour of definition 4 being adopted.

Register is a very useful book. Wishing your paper every success.—M. JAMIESON, Hawick.

Your Breeding Register is in every way excellent, and would be hard to find fault with.—E. THORP, Loughborough.

The Breeding-room Register I consider a valuable asset to have in one's bird room, and our members speak in high terms about its usefulness.—A. WILKINSON, Hon. Sec. Garston B.B.A.

The finest value in a Canary Book ever offered to the public.

CLAUDE St. JOHN'S

CANARY BREEDING FOR BEGINNERS.

PRICE - SIXPENCE.

Originally published in 'Cage Birds' under the title of

"First Steps in Canary Breeding."

ILLUSTRATED 116 PAGES ILLUSTRATED

A thoroughly practical up-to-date Guide to the cult of Canary Breeding. Specially designed for the use of the Beginner in the Hobby. All about Cages (single and double breeders), Perches and other fitments, Seed Boxes, Water Vessels, etc.; the Birdroom, the Bath, First Principles in Mating, Pairing-up, Signs of Breeding Condition, Building the Home, the First Egg, Removing Early Eggs, Incubation, Egg Food, etc., etc.

QUITE A BULKY LITTLE VOLUME. Postage 1½d.

Copies, post free, 7d.

"CAGE BIRDS," 154, FLEET STREET, LONDON.

"Impossible to equal for clearness, utility, completeness and money's worth."

That is the Universal Verdict on

THE STOCK BOOK.

The Latest Publication for the benefit of keepers of cage birds. Is framed on novel lines and contains many entirely new departures. Is absolutely indispensable to everyone interested in the hobby.

To meet the need for a substantial book designed to hold a permanent record of the progress made by any Fancier in the hobby, we have had compiled by Mr. G. E. WESTON, our

BREEDING ROOM REGISTER

AND

BIRD KEEPER'S ACCOUNT BOOK.

(COPYRIGHT.)

Which offers in a handy form a means of keeping—

The complete pedigree and description of every bird in one's room.
A full record of the season's breeding experiences.
An account of every young bird reared, and how it was disposed of.
A register of one's doings at the shows (the most complete and useful yet devised).
A cash account for the year.
A profit and loss account of the season's proceedings, and a balance sheet showing how much one has invested in the hobby.

A series of Registers will thus furnish a concise record of the career of a fancier as a breeder and an exhibitor from year to year, or over any number of years.

Many useful Emergency and other Hints will also be found in its pages.

SINGING CONTESTS.

PRESTON.

SIR,—Allow me to thank all those who assisted in making our contest such a great success. This was the first Linnet contest in Preston for many years. I hope that Linnet fanciers in Preston will waken up and form a club, as the Preston O.S. refused to take any interest in our last contest. The proprietor of the Cherry Tree Inn, Mr. R. Kirkham, will give any assistance they may require.—J. HINDLE, Hon. Sec.

BLACKBURN.

Blackburn Linnet Singing Association held contest for quality on May 18th, at the Old Red Lion, when thirty birds competed for seven prizes. 1, Burnes; 2, Mills; 3, Leeming; 4, Bentley; 5, Dobson; 6, 7, Topping. Next contest June 1st, members only. Bothman Cup and other prizes to be competed for.—RD. HAYHURST, Sec.

Blackburn L.S.A. held contest for quality May 25th, at Old Red Lion. Fifteen birds competed for three prizes, given by Mr. J. Harrison. 1st, Dodd; 2nd, Christopherson; 3rd, Carter. Judge, G. Rostron; timekeeper, G. Slater.—R. HAZLEHURST, Sec.

HOUGHTON-LE-SPRING.

A Linnet contest took place at Black Lion Hotel on May 25th. Fifteen birds were entered, and some very fair singing was heard, which delighted the visitors. The landlord gave two valuable prizes. The first bird, "The Poker," which belonged to Fred Dee, was a very nice singer, but lucky to win against such a bird as D. Laidler's "Sea King," which is a real trier, and will amply repay his owner some day if these singings are more common. T. Muckridge kept time, and A. Widdowfield judged, and gave general satisfaction.—LINTIE.

LEEDS.

The Prince Albert L.A. met on May 19th to compete for three prizes, given by Mr. J. R. Saynor. There was a good attendance of visitors. Sixteen previous birds competed. Judges, G. Towers and S. Green; timekeeper, J. Smith. 1st, 2nd, Allen; third prize divided between Wood and Dean. Contest on May 20th, when Mr. Saynor added £3 towards the yearly contributions to be sung for, entitling every member to a prize. The birds were in the pink of condition, and gave a good account of themselves, to the satisfaction of all present. Judges, S. Green and A. Binner. 1st, 3rd, 4th, 9th, 10th, Allen; 2nd, Smith; 5th, Dean; 6th, Binns; 7th, Green; 8th, Wood. After the contest, Mr. Allen, president of the Association, made a present to the secretary for his valuable services during the year.—E. WOOD, Hon. Sec.

SIR,—Seeing in CAGE BIRDS of May 18th that Mr. Allen was offering a gold medal to anyone who could bring a Linnet to beat his champion, I paid a visit to the Albert Inn on May 26th, and beat his champion, so I hope he will fulfil his promise.—JAMES CLARK (the Original Linnet King).

The usual contest at Skinner's Arms, Buslingthorpe, on May 19th, when sixteen good birds competed for three prizes. 1st, Whitaker; 2nd, Laycock; 3, Neat. Judges, T. Somers and F. Raper. On May 21st, twenty-six birds competed for three prizes, given by Mr. A. Fisher. There was a large attendance, and the birds gave a good account of themselves. 1st, Galley; 2nd, Booth; 3rd, Hodgson. Judges, T. Crane and G. Towers; timekeeper, B. Mawson.—F. RAPER, Hon. Sec.

[Please write on one side of the paper only.—ED.]

The Prince Albert Linnet Association held their usual contest May 26th, when 16 birds sang for three prizes, given by Mr. J. R. Saynor. There was a good attendance of visitors. Judges, S. Green and B. Jackson; timekeeper, G. Towers; 1st, Clark; 2nd, 3rd, Allen.—E. WOOD, Hon. Sec.

SHOW ADVERTISEMENTS

(TARIFF ON APPLICATION).

GT. HORTON O.S. Annual Show of Canaries in their First Feather and British Birds will be held on **Saturday, June 8th,** in the Congregational Hall, Gt. Horton. —Schedules from Samuel Dean, sec., 24, Crossley Street, Gt. Horton.

ROYAL CORNWALL AGRICULTURAL ASSOCIATION.
LISKEARD Exhibition, LOCAL SHOWS,
June 12th & 13th, 1907.
About **£300** Money Prizes and a large number of Specials for HORTICULTURE, DOGS, **Poultry** (Two Guineas for Best Bird in this section), **Pigeons,** CAGE BIRDS, RABBITS, and CAVIES.
ENTRIES CLOSE
Send for Schedules to Wm. May and R. Arthur Peter, Hon. Secs.

FOLKESTONE, July 3rd and 4th. 18 Classes Cage Birds.
Entries close June 18th.
J. W. GAMBRILL, Hon. Sec.

West London F.A. First Feather Show will he held on July 13th. Mr. J. Robson will judge.

The judges for the Attercliffe First Feather Sbow, on July 6th, are Messrs. Taylor, Champion and Bagnall.

Mr. Jas Winter, the Secretary of the Scottish National C.B.S., has removed to 11, Parkside Street Edinburgh.

Wibsey will hold its First Feather Shows on June 15th and July 20th. Mr. C. Stebbings will judge the first, and Mr. J. Hartley the second.

Mr. A. Morton, the Secretary of the Brighouse C.B.S., has removed to 12, Bridge End, Brighouse, at which address he has opened a naturalists' and fanciers' depot.

Mr. J. W. Ramsden asks us to mention that, owing to pressure of business, he will be unable to represent the London district on the Council of the C.B.U. in future, and requests delegates not to vote for him.

The L. and P.O.S. Autumn Members' Show will be held at the Crystal Palace on November 6th and 7th. The show will be confined to members only, and should be an interesting fixture, as it is being held on the same dates as the National Chrysanthemum Show.

At the Walthamstow F.A. last meeting, writes Mr. C. W. Mead, the sec., it was decided to hold an annual Members' Show at the back end of October, also to make a 3d. reduction on all entries made by members at the Open Show in January.

Numbers of young Canaries drop off at about six weeks old with a sort of distemper. They sit huddled up for a day or two, and then die. Those who lose them should give Mr. Palmer's Tussiline a trial. It has saved hundreds, and rarely fails if fed according to his instructions. Tussiline is sold in bottles, 7d., 1s., 2s., by Mr. Palmer, chemist, Gamlingay.—ADVT.

The committee of the Dulwich and Peckham C.B.S. appreciate the decision of the Deptford and Greenwich C.B.S. to alter their meeting night, writes Mr. W. Hodson, the Hon. Sec. There is no doubt it will be to our mutual benefit. I should like to take this opportunity to thank you for the splendid report you gave in your last issue of our country ramble.

At the last Palace Show users of Ramsden's Pure Peppers were awarded the following prizes:—31 firsts, 27 seconds, 20 thirds, 16 fourths, and commendations too numerous to mention. The birds, in their glorious array, were a living advertisement, and easily proved the superiority of Ramsden's Peppers over all others. Ramsden's Peppers are absolutely pure and fully guaranteed.—ADVT.

From the balance-sheet of the Southern Norwich Plainhead Club we gather that from its income of £19 14s. 9d. it gave £10 2s. in specials, and that the balance in hand is £2 6s. 1d. Mr. Matthes, the Hon. Sec., writes:—"The Committee desire to thank Mr. Ramsden for specials, teapot and medals, for bottest coloured birds shown under club patronage, and gratefully accept the gift for competition."

Breeding results in this district are, so far, very unsatisfactory. While a few fanciers are having the best of luck, the majority are suffering from the usual lot of empty eggs, dead in shell, etc., the long spell of cold weather we have had lately being the chief cause of so many disasters. As the weather now shows some improvement, we are looking forward to a successful finish.—JAS. WINTER, Sec. Scottish National C.B.S.

At the last meeting of the Pendleton and Salford O.S. the hon. secretary, Mr. Skelton, tendered his resignation, which was accepted with regret, and I wish to inform the members that I have taken over the hon. secretaryship of same, writes Mr. W. Jackson, 17, Caton Street, Tamworth Street, Old Trafford; and I trust they will help me and the society by being present at our meetings as often as possible, and so strengthen our position in the bird world.

The London and Counties A.C.B. members' ramble takes place on Sunday next, June 2nd, to Amersham. Trains leave Marylebone at 10.35 a.m. and 2.30 p.m. Fare, 1s. 9d.; each to take his own ticket at the booking office. The early party will be under the care of Mr. R. J. Pretty, and the latter one is confided to the care of Mr. A. Williams. Fanciers and friends are invited to participate, and should communicate to Mr. R. J. Pretty, 6, Old Burlington Street, W.—ADVT.

Of unusual interest is the May issue of "Bird Notes." The coloured plate is a representation of four handsome members of the Finch family, by Mr. H. Goodchild, and is dealt with at length in an article by Mr. Wesley T. Page, F.Z.S. Mrs. Anningson contributes a most charming article, "Nesting Notes." Dr. Clarke asks the question, "Have birds a sense of humour?" and then proceeds to answer it in a most entertaining manner. Miss Baker and Mr. Harrison contribute articles, and the number altogether is a most readable issue.

Mr. J. R. Thompson's address is now Wolsley Place, Friar Street, Craigie, Perth.

Thank all those who enquired for my Rollers. I had far too many applications to reply to all.—WALTER WHITEHEAD, Shaw, Oldham.

Messrs. Waters, Melhuish, and Jones are the judges at the First Feather Show of the Cardiff C.B.S., on June 5th.

L.C.B.A. Young Bird Show, Saturday, July 13th; judges, Mr. W. Armstrong for Canaries, and Mr. H. Norman for British birds.

Mr. J. Sandiford has again given a cup to Cinnamou-marked Yorks Club for competition amongst its members at winter shows.—R. GARNETT, Hon. Sec.

Will you please thank all applicants for my Norwich hens? Replies are too numerous, and I have answered all those who sent stamp.—C. BRIDGEFORD, Wellingboro'.

Mr. T. Pearson, of Greenwich, writes us from Yarmouth:—Kindly advise correspondents that, while by the briny, I don't intend to be troubled with letters. I'm here for a rest, and I mean to have it.

I had so many replies to my last advertisement re Norwich hen that I could not reply to them all, and so should be pleased if you could find space in your valuable paper to thank those who replied.—G. BELLAMY, Wisbech.

The first round of young appears to be only poor in the Brighton district, writes a correspondent. Have not had one youngster out myself; can't do anything right this year. One fancier has eighteen pairs up and bad all clear eggs first round, and all hens laid a clutch.

Please draw attention of show committees to the fact that I am down to judge each week from October 5th to December 7th, and, owing to my late illness, I will not take any after that date. I have refused over a score more, and secretaries keep writing me for terms when I am now fully engaged.—J. PATTERSON, Cbirnside.

We have arranged a country ramble for June 8th to Castle Mills. There is a train leaves Central Station at 2.40 p.m., and reaches Hale Station—which is to be the meeting place—at 3 o'clock. We shall be joined here by the Altrincham and Stockport Societies, and proceed by the fields, a walk of, say, five miles, to Castle Mills, where tea will be arranged for. We hope to have a good gathering, and all members and friends are most cordially invited. —E. JONES, Assist. Sec. Manchester and N.C.O.S.

I built a shed at the bottom of my garden, and did not know how to utilise it till I picked up, in the middle of March, a copy of CAGE BIRDS in a railway carriage. After perusing it I made up my mind to try my hand at Canary breeding. I bought my birds during the latter end of March and the commencement of April, and since I have had them I have not had the luck I should wish, as my first nest was not successful; but the birds are now all sitting, and it is most interesting to watch the birds pairing, nesting, etc., and I can assure you I have since spent many happy hours in my shed watching the birds. I should say I have gone by House's "Canary Manual" in my breeding, and I have found it very explicit. —P. SPENCER ROBINSON, Old Windsor.

Took it for a Lark.

To illustrate his point in a toast of the judges, the President of the Darwen Agricultural Society made use of the following quip:—Some time ago a man stole a goose from the front of a poulterer's shop in Blackburn; the poulterer gave chase and caught the thief. "Neaw then," said he; "wod's ta meon, takin' t' Goose like thad for?" "Nay," said the thief, "Aw nobbut tuk id for a Lark." At which the poulterer replied, "Ah, an' a bonny judge tha'd mek at a bird show."

A Yorkshireman in Wales.

A representative gathering of Cardiff fanciers—including the cream of the local Yorkshire Fancy—assembled at Maskell's Cafe, on Whit Tuesday, to hear a lecture by Mr. W. A. Cowgill (Bradford) on "The Yorkshire Canary." Mr. W. Harrington occupied the chair and extended to the visitor a most hearty welcome on his first visit to Cardiff, where he was the guest of Mr. W. C. Baker. Mr. Cowgill, who had a splendid reception, gave a very exhaustive address, dealing with cages, stock, breeding, washing and showing. His lecture was accorded the keenest attention, and was followed by an educative debate, in which Messrs. W. C. Baker, W. C. Flyn, G. Thompson, A. Fryer, R. C. Davies, A. Shellam, H. Ford, J. Protheroe, G. Penny, Woodruff and Negus took part. Mr. Cowgill, replying, said he had visited several of the rooms and was greatly struck to find what strides this particular breed had made in South Wales. A more ardent and enthusiastic lot of fanciers he had never met, and he was convinced that in the coming season they would more than hold their own. The usual votes of thanks brought the meeting (which will live long in the minds of those present) to a close.—F. C. BAKER.

Mr. J. F. Hills is to judge British birds at the Cambridge Show, and not Mr. F. Hills, as previously announced.

Kindly thank applicants for birds and camera advertisement in CAGE BIRDS. I really could not write to them all; I had so many offers.—A. CLARK, Garmouth, Moraysbire.

Fanciers are doing badly round here—very few youngsters. Several good hens and cocks died with the cold. The Brecon Beacons were covered with snow on Tuesday. I have a few young, but not what I had last year by this time. I have lost some of my best birds, others not laying, or had clear eggs.—D. H. TEDSTONE, Brecon.

OBITUARY.

Mr. R. FELL (Windermere).

It is with feelings of the deepest regret that we chronicle the death of that veteran breeder, Mr. R. Fell, of Windermere. In years gone by the firm of Fell and Son was one which commanded great respect from fellow competitors, and although of late years Mr. R. Fell has not done much exhibiting he has spent much of his time amongst his birds, of which to the last he was a keen lover. Our sympathy goes out to his dear ones left behind.

Mr. JOHN BURTON (Falmouth).

By the death of Mr. John Burton, of Falmouth, Cornwall loses one of its most interesting and enterprising personages. Commencing his business life with hawking a basket of crockery, he died on Tuesday last a famous and wealthy man. His enterprise and resource as a man of business have long been known throughout the West of England, and his Royal Old Curiosity Shop at Falmouth has been visited by members of nearly all the reigning families of Europe. Nothing was too big and nothing too small for the notice of John Burton. He would buy a single bird or a ship's cargo. On one occasion he tried to purchase from the Government Smeaton's old Eddystone Lighthouse; another occasion found

The late John Burton.

him opening up negotiations for the fire-escape which was prominent in the famous Parnell-O'Shea case. Lord Rosebery on one occasion said that John Burton was himself the greatest curiosity in the shop. Much sympathy will be felt for his family, and many a tear shed over the death of one of the most interesting personalities known to visitors to Cornwall. One of Mr. Burton's sons is Mr. Thomas Burton, the founder and secretary of the Falmouth Cage Bird Society. In the "Bird World Magazine" for May appeared a most interesting article dealing with the Royal Old Curiosity Shop and its owner. Alas! he is no more.

Mr. TAYLOR (Mansfield-Woodhouse).

When the members of the Mansfield C.B.C. met on Thursday evening last they experienced a severe shock. Whilst many of them had been enjoying a Whitsuntide holiday, one of their members, Mr. Taylor, of Mansfield-Woodhouse, had suddenly passed to the great beyond, and had been interred in the quiet cemetery. It seemed impossible that the tall, strong-looking man, who had so cheerfully said good-night to them only a fortnight before, would nevermore be present with them. Mr. Taylor was a comparatively new member, very quiet and unassuming in manner, and was for these very qualities fast gaining the respect and esteem of his fellow members. We are sure that all who knew him will extend their sympathy to those he has left behind, and whose loss will be irreparable. A letter of condolence was sent by the Secretary to the sorrowing widow, but the members feel how empty such messages must be to her in her great trouble.—H. ROSLYN.

The Southern Yorkshire C.C.

The annual meeting will take place at the "Napier Tavern," High Holborn, on June 7th, at 8 p.m., when the presentation of prizes, election of officers, and other important business on the agenda will be dealt with.—R. P. BROOME, Hon. Sec.

A Scotsman's Joke!

The lady who was perplexed by the fact that her two Canaries were not singers (she called them Wheeler and Wilson) should have purchased "Canary Breeding for Beginners," published by CAGE BIRDS at 6d. It contains a great deal of useful information about these popular little birds.—"Highland Times" (Inverness).

A SENSATION AT THE ZOO.

By F. FINN, F.Z.S.

A FLOCK OF HUMMING BIRDS.

All the previous week I had been in a state of anticipation, having heard a large consignment of Humming Birds was due to arrive at the Zoo on Monday last, and when I went there on Monday morning I was delighted to find they had come—about twenty of them. The Insect House was closed while arrangements were being made for their accommodation in the glass cases that had been prepared for them, but I was kindly allowed to be present and assist at the installation.

TORPID TREASURES.

Some of the birds were lively enough in their travelling cages, but others were in a very torpid condition, and anyone not knowing the peculiarities of Humming Birds would have thought them doomed to a certainty. But it seems that these little creatures, like reptiles, become inanimate if the temperature is too cold to suit them, but are readily revived by warmth. It was not at all cold on Monday morning, but it was too cold for Hummers, and several of the little things were being warmed on a cloth spread over the hot water pipes when I arrived.

A RISKY EXPERIENCE.

Presently one revived rather suddenly, and the next thing we knew was that the tiny creature—a hen—was buzzing about in the roof, and then it led us a pretty dance. Humming Birds can apparently see glass, for they do not bump against it, as other birds would do, unless exhausted, and this escaped atom hovered around, alighting occasionally, and seemed as if it would never be tired out. Then there was the danger of its ultimately falling on to a cage inhabited by some dangerous inmate, and I was told off to keep an eye on the abode of "Tommy," the talking Hill-Mynah, who, excited by a counter attraction, was in great form, and saying pretty nearly all he knew.

MEAT FOR A MARMOZET.

It so happened when the bird did flutter down that it fell on a worse place than Tommy's cage, if possible—the domicile of a pair of Marmozets. With thoughts of savoury meals previously enjoyed in its South American home, precipitated itself on the hapless Hummer and grabbed her by the head. As quickly as I could I seized the rest of the bird—there was not much of it between us! The Marmozet, with a defcrence to the rights of a Fellow of the Society which I warmly appreciate, allowed me to withdraw the Humming Bird whole, and it was quickly placed in the case with its friends.

NOT EASILY FRIGHTENED.

An experience like this would upset a good many birds' nerves for months, but this identical bird, not content with very soon pulling itself together and flying about the case more nimbly than any of them, actually persisted, not long after, in coming and hovering in front of the camera of my friend, Mr. W. S. Berridge, who was trying to get photographs of the little birds. Evidently Humming Birds are gifted with the most robust nerves, and I may say that none of these show any timidity whatsoever.

One peculiarity which is very much against the Humming Bird as a cage pet might be easily noticed in these. It has practically no use for its feet except to perch with; if a bird flutters down to the floor, it makes no attempt to walk, or at most a tiny step or so, and relies on its wings to make a fresh start, and flutters along if it cannot rise. On the perches also it sits still, or sidles along with a great deal of wing-action. Thus it will be seen that a bird with a few wing feathers missing, or its plumage matted, is at once debarred from getting about—a very serious matter. Still, if the food were placed handy, such an one might recover, as it could take exercise by whizzing its wings, a thing they constantly do.

WILL THEY SURVIVE?

There seems to be a general impression abroad that Humming Birds outside their native land are doomed to a speedy end, but all I can say is the majority of the present lot look like living; most of them are far better than the first one the Zoo ever had, which lived a fortnight in November. This, by the way, was brought over by Captain A. Pain, a very generous donor to the Society, and the present birds have been brought over by this gentleman's brother. For such a service I think both of them ought to receive the Society's silver medal. Captain Pain was present on this occasion, and gave me some interesting information.

THE FEEDING OF HUMMING-BIRDS.

The food given to these birds has been syrup mixed with "Marmite," a vegetable preparation which looks, tastes, and smells like meat extract, and presumably has the same nutritive power. The chief point calling for criticism in the birds' appearance is that they seem rather "gummed up," a difficult thing to avoid with honey-sucking birds in general. The best plan would be, I think, to have moveable perches arranged in the travelling cages, so that they could be cleaned as often as possible, while the floor should be daily covered with fresh blotting-paper. Also, the fewer birds put together the better is the result is likely to be. The birds ought to have some solid food, as they undoubtedly feed much on small insects, and it may prove possible to supply them with aphides, or some kind of ant might be acceptable. They show no desire to eat the small yellow house ant, unfortunately. Although living so much on liquid food they drink water also, and appreciate a bath.

HUMMERS IN AVICULTURE.

I am of opinion that if these birds do well, it will lead to our seeing Humming Birds in private hands before long. Evidently, if warmth and cleanliness can be ensured, the birds are not so very hard to manage; I doubt if they are really as delicate as our Wren or Goldcrest, for example. I am inclined to think that such food as the latter birds would be found to thrive on—the best ants' eggs and dried flies, for example—should be pulverised and mixed with the syrup given to Humming Birds, as I doubt if purely liquid food is suitable for their digestive organs, and, of course, live insects small enough for such birds are hard to get anyhow, and impossible to provide on a voyage.

For keeping up the necessary warmth a cage largely composed of glass, and with a hot water tin under it, could be used with advantage; but this particular difficulty would probably keep most specimens off the show bench, though if their owner went with them matters could be arranged well enough.

OUR CANARY BREEDING COMPETITION.

See Back Page for Particulars.

Will you kindly send me a form for entering your competition for novices in Canary breeding? At the same time, could you let me know who is the nearest person to apply to as a member of a recognised cage bird society, as there is no cage bird society here or in Windsor?—P. S. ROBINSON, Albany Villa, Old Windsor.

[It is not absolutely necessary that the witnesses should be members of a cage bird society. Rule 6 deals with such cases as yours, and if you send a sworn declaration, properly witnessed, it does not matter whether the witnesses be fanciers or non-fanciers.—ED.]

I am very pleased with your paper, which is much better than any other I have seen. I am entering for your competition.—A. ADCOCK, High Street, Chatteris.

I hope to enter your competition, as it is my first year of breeding. I have four young ones at present, and am watching them in my bird room like a jealous cat. I do want to keep them if I possibly can manage it.—T. DEAN, Wigan.

At our last meeting we had a long chat about your scheme, and I am pleased to say that, should it come to the knowledge of any of our members that there are any likely competitors, either in our neighbourhood or surrounding districts, four of our officials have volunteered to work on your behalf, and at the same time be the means of bringing them into our society.—A. WILKINSON, Hon. Sec. Garston B.B.A.

I have been a reader of CAGE BIRDS for two or three months, but have only just taken a fit to join the competition. It is my first year with Canaries, and I should like to know if the eggs or young Canaries that I have bred count in the competition?—A. HUDSON, 22, Whittaker Street, Burnley.

[Yes, most certainly, the young will count.—ED.]

Kindly send me one of your forms for your "C. B." competition for novices, as I am only a novice. I have never bred a bird of any sort before, and I should very much like to go in for one of your prizes. I have only got two pairs of birds, but I have got one pair of birds with four strong youngsters out of five, hatched on the 23rd of April, hoping these will be eligible to compete, and started reading CAGE BIRDS about seven or eight weeks ago, and I find it very interesting, and some useful advice for novices, and I think that every novice should have one of your CAGE BIRDS ANNUALS. I find it very useful, as I have had one of my hens egg bound, and the first thing that I did was to look at the "C. B. A.," and I followed the instructions there and the hen was all right next day.—A. BISSET (Swindon).

London and Counties A.C.B.—Special General Meeting, May 30th, at The Bay Malton, 8.30 p.m. To discuss rule 17 C.B.U. and to take a vote thereon; also to select a definition of a novice. You will find full particulars of these questions on page 454 of CAGE BIRDS of May 18th. Outing on June 2nd to Amersham. It is the desire of some of our members to go early. The afternoon train leaves Marylebone (G.C.R.) 2.30 p.m., the morning train 10.35 a.m. Will those members who desire to participate in this ramble kindly let me know by Thursday, at the meeting, so that arrangements can be made for providing dinner and tea. Fare, 1s. 9d., members to take their own tickets.—R. J. Pretty, hon. sec.

THE CANARY BREEDING SEASON

Is now with us and everyone who contemplates cultivating Canaries for pleasure or profit, should immediately procure the Standard Work on Canaries:—

House's Canary Manual

PRICE ONE SHILLING. Post Free 1/2.

Superbly illustrated by the Champion Canary Artist, Mr. H. NORMAN. EVERY BIRD DEPICTED IS A VERITABLE MODEL, and shows the breeder what to aim for. Some idea of the popularity of this Practical Manual may be gathered from the fact that under the title of "The British Canary," it has passed its Third Edition, entering upon a Fourth Edition of 5,000 copies under the new title of "HOUSE'S CANARY MANUAL."

The following Summary of Chapters, etc., will show you how completely the ground is covered —

Aviaries and Cages.	**The Young Birds.**	**Young Birds Dead in Shell.**	**Exhibiting.**
Show Cages.	**Food for Nestlings.**	**Red Mite.**	**Diseases treated very fully.**
Perches.	**Hens Refusing to Feed.**	**Clear Eggs.**	**Every variety of Canary is treated**
Breeding Canaries.	**Sweating Hens.**	**Moulting.**	**upon at length and illustrated.**

MR. HOUSE has thoroughly revised and brought this work up-to-date and incorporated a chapter on the "Roller or Singing Canary."

Send 1/2 now and secure a copy hot from the press.

F. CARL, 154, FLEET STREET, LONDON, E.C.

CLUB NOTICES.

No charge is made for notices of forthcoming meetings, but they can only be inserted once. Should secretaries desire to secure immediate insertion of their announcements **exactly as written** they can do so by prepayment at the rate of three words a penny.

Accrington and Dis. C.B.S.—June 13th, at Central Conservative Club, 8 p.m. Young Show business; new members, etc.—D. Harwood, sec.

Arbroath Scotch F.C.C.—June 6th, at Crockatt's Rooms, 8. Intending members invited.—J. S. Napier, sec.

Ashington and Hirst C.B.S.—June 5th, at Grand Hotel, Hirst, 7 p.m. Date of show.—J. Miles, sec.

Barnsley and Dis. C.B.S.—June 4th, at Maltsters' Rest, 8 p.m.—T. Coward, sec.

Battersea and Dis. C.B.A.—June 5th, at Duchess of Devonshire, Clapham Junction, 8.15. Schedule of Open Young Bird Show, and other important business.—F. Easterling, sec.

Bermondsey and Dis. F.S.—June 4th, at Samson's Castle, 8.30 p.m.—A. Lupton, sec.

Bolton and Dis. O. and R.C.S.—June 3rd, at Joiners' Arms Hotel, Deansgate, 8 o'clock p.m. Important business; members earnestly requested to attend.—J. Stringer, sec.

Bolton and Dis. P.C.B.S.—June 4th, at Olinda Cafe, 8 p.m. Allotment of specials; Nest Feather Show business.—J. W. Bancroft, sec.

Bradford (East) O.S.—June 4th, at Park Chapel Schools, 8 p.m.—H. Hill, sec.

Bradford (West) C.B.A.—The members will meet at the Midland Station, June 1st, to go by the 2.5 p.m. train to Ilkley, and then walk to Addingham and back to Ilkley; any friends wishing to go will be heartily welcome.—T. Clegg, sec.

Cheltenham C.B.S.—June 5th, at Sydney Arms Hotel, 8 p.m. First Feather Show business.—A. S. Treasure, hon. sec.

City and County of Perth O.A.—June 3rd, at City Cafe.—R. Thompson, sec.

City of Bradford O.S.—June 8th, at Travellers' Rest, 8. Dates, etc., Members' Shows; Union business.—P. Stansfield, sec.

City of Dundee and Dis. N.M. and B.B.A.—June 5th, at Doig's Rooms, 8 p.m.—Alex. Miller, sec.

City of Hull C.B.S.—June 3rd, at Oddfellows' Hall, 8. Second Nest Feather Show; judges, Messrs. Brumby and Harland.—F. F. Potter, sec.

Clapham and Dis. C.B.A.—June 3rd, at Alexandra Hotel, Clapham Common, 8 p.m. Forming of rules; enrolling new members, and important business.—H. W. Baker, hon. sec.

Crewe O.S.—June 1st, at Nag's Head, 6 p.m. Table Show of British Birds. June 4th, at 7.30, monthly meeting.—A. Wilkinson, sec.

Darlington C. and B.B.F.A.—June 5th, at George Hotel, 8 p.m. Classification for Open Show, etc.—R. S. Black, sec.

Denholme and Thornton C.B.S.—June 4th, at Bull's Head, Thornton, 8 p.m. Date of First Feather Shows; members please attend.—J. Jarratt, sec.

Dewsbury and Dis. C.B.S.—June 1st, at Royal Hotel, 7.30. Important business.—B. Cook, sec.

Dulwich and Peckham C.B.S.—June 6th, at the Herne Tavern, Peckham Rye, 8 p.m. sharp. Paper on "The Norwich P.H.," by W. J. Cranfield, followed by open discussion; all friends invited.—W. Hodson, hon. sec.

Eccleshill C.B.A.—June 1st, at Fountain Inn, 8 p.m. Date of First Feather Show; also levy to Yorkshire Union and judges for Y.U. winter shows.—W. Ashworth, sec.

Edinburgh Norwich Canary and M.B.S.—June 6th, at 142, High Street, 8 p.m. Business meeting.—W. Dunlop, sec.

Exeter and Dis. C.B.S.—June 4th, at Oddfellows' Hall, 8 p.m. First Feather Show; Mr. J. Rushmere judge; eleven classes—two N.P., two Crest, two Yorks., one A.V. Canary, one Mules, one Goldfinches, one British, one Foreign; prizes—silver cup and eleven medals.—R. H. Folley, sec.

Glasgow Derby.—Annual meeting, June 7th, at Grand National Halls, Corbals Cross, 8 p.m. Election of judges, etc.—D. Black, sec.

Gloucester and Dis. C.B.S.—June 6th, at Ram Hotel. First Feather Show; judge, Mr. F. Mansfield; birds to be staged by 6.30.—J. Houghton, sec.

Greenock, Port Glasgow, and Gourock O.S.—June 5th, at Victoria Hall, 8 p.m.—W. H. Stodter, sec.

Guisborough F.S.—June 1st, at Headquarters, 7 p.m. Very important.—W. T. Simpson, hon. sec.

Halifax O.S.—June 1st, at Griffin Hotel, 8 p.m. First Feather Show.—J. F. Thackray, sec.

Hartlepools C.B.S.—June 4th, at Y.M.C.A. Rooms, 8 p.m. Mr. Woodhead will give his experience and impressions on entering the Fancy.—E. Woodhead, sec

Huddersfield O.S.—June 3rd, at White Hart Hotel, 8 p.m. Monthly Table Show.—S. Lodge, sec.

Jarrow and Dis. C.B.F.S.—June 5th, at Lockhart's Cafe, Ormond Street, 7.30 prompt. Very urgent business; members please turn up; schedule, also contribution card and representative.—J. S. Carrick, sec.

Laisterdyke B.F.A.—June 1st, at Royal Oak Hotel, 2 o'clock. First Feather Show; judge, W. Mann. Monthly meeting, June 4th; buying colour feed, etc.—J. Pownall, sec.

Leyton and Dis. C.B.A.—June 3rd, at Headquarters, 8 p.m. Lecture on colour feeding by Mr. Morris.—B. F. Forse, sec.

Leeds C.B.S.—June 1st, at Lockhart's, 7.30 Debate on moulting; important business re judges for Open Show.—Stephenson and Hornby, secs.

Leeds Roller C.C.—June 1st, at Lockhart's, 7.30 p.m. Arrange judges for coming contest; a hearty invitation is extended to all Roller fanciers.—C. Towes, sec.

Loanhead and Dis. C.B.S.—June 8th, at Volunteer Hall, 7 p.m. Election of judges, consideration of staging, and hall for show.—W. B. Smart, sec.

L.C.B.A.—June 13th, at The Napier, High Holborn, 8.30 p.m. Revision of schedule for Autumn Show; committee at 8.—T. A. Wade, sec.

L. and L.F.A.—June 2nd, at Cluskey's Rooms, Glossop, 3 p.m. Lecture by S. R. Compston; show cages; Cage Bird Union patronage, etc.—H. Oliver, sec.

Lowestoft and Dis. C.B.S.—June 3rd, at Fox and Hounds, 8.30 p.m.—George Francis, sec.

Manchester and N.C.O.S.—June 3rd, at Deansgate Hotel, 7.45 sharp. First Feather Show business; final arrangements for ramble, on June 8th, to Castle Mills and district.—E. Jones, asst. sec.

Manningham C.B.A.—June 1st, at Mowbray Arms, 7.30. Selection of judges for Union shows, etc.—E. Kemp, sec.

Morley C.B.S.—June 1st, at Band Room, 7.30. First Feather Show, etc.; all members please attend.—W. H. Groundwell, sec.

Morriston C.B.S.—June 5th, at Woodfield Coffee Tavern, 7.30 p.m.—D. Jeremy, sec.

Newcastle and Dis. C.B.S.—June 6th, at Lockhart's, 7.30. C.B.U. rule 17; other important business.—Curry and Hutchinson, secs.

Nottingham and Notts O.S.—June 5th, at Cobden Hall, 8 p.m. Very special business in connection with the C.B.U.—G. E. Wilkinson, sec.

Ormskirk and Dis. C.B.S.—June 3rd, at Headquarters, 8 p.m. Arrangements for First Feather Show; washing exhibition by Mr. Thos. Johnson; all fanciers invited.—T. H. Tiffen, sec.

Pendleton and Salford O.S.—At Derby Arms, Oldfield Road, 8 p.m. First Feather and other important business; friends cordially invited and new members will be admitted; CAGE BIRDS' competition forms can be had at the meeting; all correspondence now to be addressed to W. Jackson, hon. sec., 17, Caton Street, Tamworth Street, Old Trafford.

Preston O.S.—June 4th, at Empress Cafe, 8 p.m. Annual ramble, Sunday, June 2nd, 9.30 train Longridge; all fanciers invited.—J. W. Cleminson, sec.

Rochdale Good Intent C.B.S.—June 5th, at Temperance Club, 8 p.m. First Feather Show business, etc.—Sam. M. Clayton, sec.

St. Helens O.S.—June 3rd, at George Inn, 8 p.m.—T. Vose, sec.

Sheffield and Dis. C.B.S.—June 6th, at Wentworth Cafe, Pinstone Street, 8 p.m. Novice Young Bird Table Show; two classes Yorks., two Nor., two Crests, one A.C.V.; entry, 3d. per cage.—Bishop and Pilley, sec.

South and North Shields C.B.S.—June 5th, at Gregg's Cafe, 7.30. Classes for First Feather Show; payment of subscriptions to enable members to show in members' classes.—Wm. Duke, sec.

Spen Valley C.B.S.—June 3rd at Northgate Hotel, 8 o'clock.—A. Whitehead, sec.

Stockport B.F.A.—June 4th, at Boar's Head Hotel, 8 p.m. Entries for First Feather Show must be on the table at 9 p.m.—W. Stafford, sec.

Stockton-on-Tees and Dis. C.B.S.—June 6th, at Leeds Hotel, 8 o'clock. Important business.—J. W. Lowes, hon. sec.

Wallasey and Dis. C.B.S.—June 6th, at St. Mary's Schools, 8 p.m. Discussion on training and staging young birds for exhibition.—Wm. Mallinson, sec.

West Bromwich and Dis. C.B.S.—June 5th, at 12, Bull Street, 8 p.m. Passing of rules and election of officials.—T. Duffield, sec. pro. tem.

West London F.A.—June 6th, at Bush Hotel. Mr. Trower will lecture on seeds.—J. Dewhurst, hon. sec.

West of Scotland B.C.—June 6th, at Nelson's Temperance Hotel, 83, Ingram Street, Glasgow, 7.30 p.m. Lecture on "The Norwich Plainhead," by Mr. C. Campbell (Stirling); all fanciers invited.—Geo. Smart, sec.

Wibsey and Dis. C.B.S.—June 1st, at Horse and Groom Inn, 8 p.m.—E. W. Johnson, sec.

Wimbledon and Dis. C.B.S.—June 3rd, at The Broadway, 8 p.m. Rule 17 and what is a novice; also judging competition British birds.—W. H. Colman, hon. sec.

Windhill, Shipley and Dis. O.S.—June 1st. Members' Show; judge, J. Broadley.—E. Broadley, sec.

Yorkshire Canary Club.—Annual General Meeting, June 8th, at the Oddfellows' Hall, Thornton Road, Bradford, 4 o'clock. All members kindly attend.—W. Mundell, hon. sec.

BEGINNERS: You MUST read the ANNUAL.

QUESTIONS & ANSWERS

DOUBTS AND DIFFICULTIES SOLVED BY SPECIALISTS.

Queries will be answered under the following conditions:—

(1)—*All questions must be clearly written in ink (or typewritten) on one side only of paper, and must conclude with either the correct name of querist, or a pseudonym, or initials.*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper and enclosed with the query. In no case must the address appear on the query.*

(3)—*Queries intended for different specialists must not be written on the same sheet of paper.*

(4)—**Queries must not include** *or be included in orders for books, instructions re advertisements, or any other matter for publication.*

(5)—*The department to which the queries refer must be stated in bold letters on the left-hand corner of the query.*

(6)—*If an answer in the same week's issue is desired, queries must be posted to reach us by* **Monday's first post** *at latest. Queries will be dealt with in the order in which they are received, and only as space permits. The earlier queries are received the better attention they are likely to have.*

(7)—*Queries relating to illnesses of birds, except enquiries as to cause of death (for which see Post Mortems) will be answered by return of post on receipt of a postal order for sixpence and an addressed stamped envelope. Queries of an ordinary nature will be answered by post, if desired, on receipt of a postal order for one shilling and a stamped addressed envelope.*

(8)—*All who require letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence to pay postage expenses, &c., otherwise their letters will not receive attention.*

(9)—*All queries must be addressed* **the Editor, "Cage Birds,"** *154, Fleet Street, London, E.C. Only queries so sent will be answered. Postcards are not admissible.*

NOTE.—Readers are requested to carefully study past numbers and current issue before submitting questions. By doing so they may save trouble and unnecessary repetition.

THE following gentlemen represent CAGE BIRDS staff of **ADVISORY EXPERTS.** Queries must in no case be addressed to any of them individually, but to the Editor.

Norwich Plainheads.—**J. H. Payne.** Yorkshires.—**H. W. Battye.** Crests & Crestbreds—**W. E. Greeves.** Cinnamons—**J. North.** Miscell.—**"Old Judge."** Border Fancies—**J. Patterson.** Scotch Fancies—**R. Wright.** Lizards—**Barker Clegg.** Lancashires—**S. R. Compston.** Greens—**S. Hadwin.** Belgians—**W. B. Cobb.** Rollers—**"Schoolmaster."** British Birds, Mules and Hybrids—**G. E. Weston.** Foreign Birds—**Wesley T. Page,** F.Z.S., M.B.N.H.S., &c. Park and Lake Aviculture—**Frank Finn,** B.A., F.Z.S., M.B.O.U., &c. Wild Bird Life—**H. Norman.**

CANARIES.

NORWICH PLAINHEADS.

Answered by J. H. PAYNE.

Bird Moping.

J. G. H. Bellamy.—Put a piece of sulphate of soda in the bird's drinking water about the size of a horse bean, and let him have this to drink for one day; then give, in the drinking water, fresh daily, for a fortnight, ten drops of tincture of quinine. Three times a week you may give him a small piece of spouge cake, to which put on a few drops of best sherry. For the staple diet you cannot do better than give best Spanish canary, and, as a tit-bit, give twice a week a half teaspoonful of the following mixture:—Hemp, German rape, and niga seed. Let it have, in the summer months, a few young dandelion leaves and a sprig of watercress two or three times a week, and during the winter a piece of sweet apple put between the bars of the cage occasionally, for it to peck at.

Not Pairing.

Breathless.—You are doing quite right to put the hen on plain canary seed, if you think excessive fatness is the cause of her not going to nest. Give two or three times a week some young dandelion leaves. Put a piece of sulphate of soda in the drinking water twice in one week, about the size of a horse bean, and at the end of ten days return the cock to her.

Hen Breaking Eggs.

F. L. Hill.—The cause of your three eggs being broken in the nest is probably due to the cock pecking them, he being most likely of a mischievous disposition, or it may be that the hen has long toe nails; examine her, and if she has them abnormally long cut them down with a sharp pair of scissors. Do not cut them too far down or you will make them bleed. If you hold them up to a strong light you will notice a vein running so far down. Cut to below this. The next nest take the cock away, as he may be the cause of the mischief, and as the season is so far advanced you cannot afford to run the risk of more broken eggs.

Wheezy Hen.

H.E.S.—Your hen is certainly not in breeding condition or she would have laid more than one egg, and it is now doubtful if she will do much good this season. When we get some warm weather this will do her more good than anything. Feed as you have been doing, except the milk sop, and instead give three times a week a small teaspoonful of egg food, to which add 6 drops of Parrish's Chemical Food. Give her some young dandelion leaves three times a week.

Colour Feeding.

R.W.S.—Commence giving your young Norwich colour food when they are six weeks old, and, as you say, in a mild form for the first few days. The tail and flight feathers which have been plucked by the hen will undoubtedly show the colour food. The bird with the tail plucked out would not be eligible to compete in a class worded as some are, non-tailed and flighted, but it would be where the class is simply unflighted. The two feathers in the flights would not debar it from competing in such a class, neither would it count against it to any great extent.

Young Bird Difficulties.

F.H.—You need not have any fear about the young birds falling from the nest, as they are sensible enough not to venture too much. If you shifted the nest, when they begin to move about they would probably jump out, and not go back again. Young birds that get out of the nest too early nearly always get a check, and rarely grow and feather as they would if they had remained in the nest until they were quite strong. The longer young birds stay in the nest the better and stronger they will be. (2) No, a nursery cage should not have the door open so that the old birds can get in to the young, as this defeats the object for which they are intended—to keep the old birds from plucking the young. The old birds will feed the young through the wires. Put the young in the nursery cage when they have been out of the nest a day or two. Yes, you may put a perch in about three inches from the bottom. You may have your nursery cage about eight inches square. (4) For eight birds you will require a cage about four feet long, twenty inches high, and a foot wide.

Is it Paralysis?

S. Brandon.—Your bird is either in a very weak state or else it has partial paralysis. You may try giving it 2 drops of Parrish's Chemical Food every day for a fortnight, which drop into the beak. Bathe the legs in a little warm water, afterwards drying with cotton wool. Should it get no better then I am afraid it is beyond a cure, and I should recommend you to destroy it.

Lump on Chest.

No Name.—I am pleased to hear that your bird has made such a good recovery under the treatment I recommended, and that he is now singing lustily, and in good form. Bathe the lump on your hen's chest twice a day for three or four days with a little warm water, which put on with a piece of soft sponge, then prick with a clean needle, and gently press the lump, when you will probably find some matter will come away.

Noise in Nostrils.

Experantist.—You had better not follow out my advice which I gave you whilst the cock is with the hen and young ones, as it would probably upset the latter. You had better stop until the hen has gone to nest again, when you can take him away for a few days whilst you administer the remedy, and afterwards return him. (2) No, I do not think I can suggest anything else at present. Try what I recommended first, and if it has not the desired effect write again.

Breeding Difficulties.

St. Vincent.—Should the eggs, which are under the hen with the two newly-hatched young ones, hatch out, the only thing you can do is to take out these two youngsters and put them at the cage bottom in a nest by themselves, where the cock will feed them. I am doubtful about the eggs hatching out at all, as they will not get the regulation heat when with young birds up to ten days old as, of course, the hen will not sit so close as she would if incubating the eggs. There is no accounting for your hen leaving the nest in the manner she did. It is only just another instance of the fickleness of the softer sex.

How to Divide the Wives.

Collier Lad.—I should recommend you to keep the cock with the No. 1 hen, and let the other two hens rear their young themselves. When the young are old enough to do for themselves you can then run the cock back to the hens. Your feeding is right so far, but you may use the white as well as the yolk of the eggs. Let them have plenty of hemp seed and green food. Chickweed, when in seed, is a grand thing.

Continued Moulting.

H.P.T.—The constant moulting must have considerably weakened your bird, so you had better give a tonic. Let it have in its drinking water every day for a fortnight, fresh daily, 10 drops of tincture of quinine. Two or three times a week let it have a small teaspoonful of egg and biscuit, to which add 6 drops of Parrish's Chemical Food. You do not say whether you hang your bird in a window or not, but if so remove it at once to a cosy corner away from all draughts. Cover over at night with a warm cloth, and hang below the level of the gas burner. Let the staple diet be best Spanish canary seed, and occasionally just a pinch of mixed seeds, hemp, German rape, and niga.

A Question of Claws.

Second Year.—For the claw which has turned aside I should recommend you to split a bit of soft quill, put it round the claw, and bind with a piece of fine white worsted, taking care not to bind too tightly. Let this stop on for a week, and then remove, when you will see if it has effected any improvement. Should you see any sign of redness about the foot, you will know that you have bound up too tightly, and you must then loosen it a little. (2) I should not recommend you to use up the egg shell with the egg whilst feeding young ones. It is a very good plan to do this just previous to the breeding season, when getting the birds into condition, and it acts as a preventive against soft shelled eggs.

YORKSHIRES.

Answered by H. W. BATTYE.

Cause of Death.

A.C.D.—From the particulars you give of the sudden death of your Yorkshire cock, I am of opinion that the bird had a fit, and broke a blood vessel. Perhaps it had been startled by something; it may have been by one or more of the young ones coming out of the nest and fluttering about, probably the cock bird was of a very nervous disposition. I have seen such birds go off into a fit immediately if frightened by any little sudden disturbance. I don't think his exertions in feeding the young ones would have anything to do with his death. Sorry you have had the misfortune to lose such a useful bird, but these are the kind of disappointments bird breeders have to contend with. Pleased you have had such good luck up to this happening. Keep up your courage, and don't be downhearted. Glad to hear you have found CAGE BIRDS so useful and helpful to you in your early efforts as a Canary breeder.

Young Birds Dying.

R. E. Gibson.—Am sorry to hear of your misfortune, but this has been a very trying season to a good many bird breeders. Your feeding is fairly correct, but would advise stopping all food except egg food and crushed hemp seed from the time the young leave the hen until they are able to crack seed for themselves. When they are about five weeks old you might sprinkle a little summer rape seed on the top of the white seed in the seed hopper, as they will be able to crack this sooner than the white seed. Milk sop is good on many occasions when a bird is ailing, but I cannot recommend its use as a general food for young birds, neither do I advise green food when the young ones have been taken away from the hen. I think if you stick to dry egg food and crushed hemp seed you cannot do better. I hope you will have better luck than you have been having up to now.

Why Did They Die?

No Name.—Sorry to hear of your being so unfortunate in losing your young birds when they have left their parents, but am afraid this will be the case with a great many breeders, owing largely to the very unseasonable weather we are and have been having, and there does not seem much sign of any improvement up to the present. Your feeding is all right, except the milk sop, which is a rather dangerous food for young birds, and especially for breeders who are like you and have to leave home very early in the morning, and have no one to attend to them till they return home at night. I do not care for sloppy food of any kind for young birds at from four to six weeks old. If a bird is ill, sometimes milk sop will do much good, but as a regular food I cannot recommend it. (2) As to how much egg food a bird four weeks old should have per day I can hardly say, as young birds the same as old ones vary a good deal, some waste far more than they eat. (3) You ask is it correct to not let young birds have any water until they are about five weeks old. In my opinion it certainly is neither correct, wise, nor humane to deprive them of the chance to drink till that or any other age, and to my mind those who do are guilty of cruelty, and deserve to be punished. If you noticed birds that were drinking more than was good for them you might limit their opportunities by allowing them to have the water on for half an hour, say, morning, noon, and night. I have not used Nestle's milk, so cannot say whether it is as good as cow's milk, but think I should prefer the latter, though possibly Nestle's may not turn sour so soon as cow's milk.

A Fighting Pair.

A.E.H.—From what you say I have very little doubt your birds are both cocks. Could you not get some experienced local fancier to examine the one you bought for a hen? The sex will be easy enough, I think, to determine by this time by a breeder of experience. Seeing that you have been feeding them as you have for such a length of time, everything points to both birds being cocks.

The Use of Colour Food.

Colour Food.—(1) Yes, you should give your young birds colour food every day during the moult, beginning when they are seven or eight weeks old and continuing till they are in full feather again. You can reduce the strength of the colour food towards the finish of the moult, but do not stop it till the bird has finished the head and neck, which is usually the latest. (2) The second moult will not begin until August or September next year. I don't think sulphate of iron is any good until the latter part of the moult, when you can put a piece about the size of a split pea in the drinking water on alternate days.

Bad Feeders.

S. Taylor.—I am at a loss to account for the way your birds are behaving with the second nest, as when a pair have been agreeable and fed well together during the first round they usually will do the same with the second, and I think when the young ones get a little older you will see they may be doing all right. The cock bird seems to be jealous of the hen feeding the young ones, and wants to do all the work himself. You do not say how old the second nest of young are, but if they are old enough to keep themselves warm without the hen sitting on them, say twelve or fourteen days old, I should be inclined to take the hen away and let him have a try by himself, as you say the hen will not feed when by herself. I hope you will manage to rear them.

CRESTS AND CRESTBREDS.

Answered by W. E. GREEVES.

Crested Young Ones Dying at Three Days Old.

E. Southwood.—Yours is a case that a great many breeders of Canaries have to report. Your management is quite correct, and you can do nothing more than you have already done. Did the hen feed the young ones? If so, I should consider in a half-hearted manner, and not sufficient to keep them alive. If a hen won't feed, there is no known method that will make her; the better plan is to take the young ones and put under a hen that is known to be a good feeder. You did quite right to take the eggs away until the third was laid; my plan is to take the third egg away and not sit the hen down till the evening on the three eggs. The next time the hen sits, I should take the cock bird away, and not return him until the young ones are four days old. I do not like groundsel as a green food for breeding birds, nor young ones; instead, give chickweed or watercress. Your feeding is quite correct, but do not give egg food to the hen when sitting oftener than once a week.

Crested Hen's Crest Falling Off.

A Novice.—Crest feathers will fall out and back of head get bare without any apparent cause. This will not interfere with your hen's breeding. I should advise you to leave it alone, it will moult out all right. The noise is no doubt caused from a cold; give bread and milk daily for a week, over which put a few drops of syrup of tolu, and add to the drinking water a few drops of whisky. As you say she laid last Sunday and Monday, I conclude that she is now sitting. If at the end of 14 days the cold is not relieved, remove the young one to another hen to bring up. Fitful laying is not at all uncommon, and cannot be remedied. The only thing to do is to have patience and hope for better results. Large breeders have the advantage in being able to put these casual-laid eggs under other hens. Yes, I consider it the better plan to shut the young ones away from the old birds so soon as the hen commences to build, whether she plucks them or not, either by the aid of a nursery cage or by a wired partition in the breeding cage, so that the young may be fed by their parents.

CINNAMONS.

Answered by J. NORTH

Fertile Hen not Laying.

Constant Reader.—It is hazardous to assign a reason for your four year old hen building a nest but laying no eggs, although you say she bred both Canaries and Mules last year, but you do not say whether or not she was then under your observation. Four years is not a bad age for a breeding hen, and although you relate that you have older hens now rearing families, there are a great many that do not live so long. Your hen is evidently out of condition, but this might arise from excessive laying last year, or she may have liver or kidney trouble, in which case her excreta would be copious and light in colour. Remove her into a good sized cage, give fresh salad and a bath daily, also plenty of grit and broken egg shells. Keep her there until she shows signs of wanting to nest again.

BORDERS.

Answered by J. PATTERSON.

Pairing Various.

East Boldon.—Yes, Cinnamon Borders are to be obtained, but there are very few Cinnamon cocks in the market at any time, or, indeed, I may say, bred at all. Most breeders, with but few exceptions, use Cinnamon blood solely to set markings and improve the quality of feather in their show birds, and I have no hesitation in advising you to use both birds of a Cinnamon colour. Judging from the inquiries received for Cinnamon stock birds, they seem at last to have won many admirers. I find that when paired up year after year they increase the length of feather, and you must introduce a little dark blood from parents exceedingly short in feather to counteract this tendency. (2) Yes, a pair of this sort will undoubtedly breed greens, unless their parents were bred from lightly marked birds; then you might expect a few heavily marked progeny in each nest. It is also advisable to pair a green to a Cinnamon, they tone down the feather and at the same time bring up the peucilling, especially if the hen be the Cinnamon. See that your green birds are not inclined to show bronze on butts of wings; if so, it is not advisable to use them, as the young will show this fault more markedly. Regarding the colour of the young, it greatly depends on the parentage of your stock birds; say a green cock bird from dark-eyed parents and a Cinnamon hen, the young would all be greens, but if a dash of Cinnamon blood in him, you might expect both greens and Cinnamons, and the Cinnamons bred which you might expect to be hens are very valuable to pair back to green blood again; but if a Cinnamon cock and a green hen (unless the hen was bred from Cinnamons), the progeny you might expect to be both greens and Cinnamons; the Cinnamons so bred would turn out hens, and if there is Cinnamon blood on the hen's side as well, they would be both cocks and hens. (3) Yes, the dimensions for your breeder are very suitable, and allow each pair nice room. When the partitions are taken out it would make a good flight, but personally I prefer the Scotch all-wire single breeder, they are more adapted to the active little Borders, also very simple in construction, and therefore much easier to keep bright and clean.

Single Chick.

Wilkie.—Many fanciers have felt great difficulty rearing a single chick in a nest. If you have another nest of youngsters about the same age, it is advisable to either put it amongst them, or, if the number of the brood is say, five, take other two from nest about the same size, and put along with the single one, and you will find that the hen will attend to the three better, and that they will grow ever so much more rapid; but see you put some mark or take the markings of your single birds before putting the others beside it, so that you may know it for future guidance. If, however, you have none of the same age, I have found a few pieces of cork, little larger than one of her eggs, act wonders in keeping a hen from sitting so heavily on the chick. I have no doubt but that you will find the legs deformed a little. I have seen these scarcely able to take the perch, and others had to be killed for the same trouble. The cause, I think, is the continual weight of the hen's body and the chick being nearly in the same position; it puts its legs one at each side, with the result they get cramped.

BELGIANS.

Answered by W. B. COBB.

Hen not Pairing.

Very Slow.—Your hen cannot possibly be in breeding trim, otherwise she would have shown signs of nesting under the circumstances you mention. Young hens, I find, sometimes rather backward in coming into breeding condition, especially when they have been paired up all the winter. Separate the hen by all means, and in addition to your staple diet of Spanish canary seed, give a little egg food three times a week, on alternate days giving a little German rape seed, and pair up again in about a fortnight or three weeks. Do not change your birds into another room again or you will more than likely put some of them into the moult.

Room for Belgians.

W.D.F.B.—Keeping Belgians in a room built of wood, 3 in. thick, 8 ft. by 9 ft. by 8 ft. high. Well, it is quite possible. I know breeders who use such rooms to keep and breed Canaries, but I do not advise them myself for Belgians. Especially, as you say, you noticed damp striking up from the floor (concrete) last back-end. There is nothing more detrimental to success in breeding Belgians than a damp room. Providing you can make your room damp proof, I see no reason why you should not be able to breed in it; the situation and aspect of your room is all that is desirable, but it ought to be well ventilated. I would far rather advise a working man launching out in Belgians to keep no more than he can conveniently indoors to experimenting with outside structures.

ROLLERS.

Answered by "SCHOOLMASTER."

A Heavy Loss.

Disappointed.—It is very sad to lose one's birds in the way yours have gone. It is only possible to come to one conclusion, that they died of "bird fever," or some other infectious disease. You say you had 13 birds, and bought another cock bird, which died within a week of you getting it. Then two days afterwards the hen you had paired him to died, and since then your other birds have followed at short intervals, until only one is left. That is exactly how bird fever clears out a stock. It seems highly probable the disease was introduced by the strange bird you bought. You should have sent a body to Mr. North for post mortem examination. Still, I have no doubt as to the cause myself. You say the birds "seem only ill about two days, and go like a fluffy ball." Strange birds, bought from strange places, should be put apart for a week or ten days before being put with one's other birds—in quarantine, as it were—to be sure of their perfect health. Your cages and your room will want thoroughly disinfecting before you can hope to keep fresh birds in them. You should get Dr. Clarke's booklet on "Septic Fever," post free 7d. from CAGE BIRDS office. Better luck to you in the future. Remember to always take precautions when buying from strangers.

No Song Since the Moult.

Cam.—I should think your two cock birds have never come into good condition after the moult. Do they wheeze at all, or show any signs of having a cold, or of suffering from "loss of voice"? If they do not I should advise you to give them a little more generous diet. Get some good hemp, maw, and niger seed, and give each bird half a teaspoonful on alternate days, that is, hemp one day, maw the next, etc. Also get some egg bread, or one of the patent Canary foods advertised in our columns, and give each bird a small teaspoonful every day, well mixing amongst it 3 or 4 (not more) spots of Parrish's Chemical Food, obtainable from any chemist. Further, let them have one or two small dandelion leaves, and a seeding head,

every day. This treatment should soon bring them on song. Remember that Rollers want a little change of food at times, especially during and just after the moult, and not be kept on just canary and rape all their lives. It is very likely your food which has been at fault. I suppose you let them have a bath frequently. Supply good grit, keep them in a cosy spot, and give a bit of appls now and again?

MISCELLANEOUS CANARY QUERIES.

Answered by "OLD JUDGE."

Colour Feeding.

Will you tell me a good colour food, and how to mix it? At what age to feed young birds on the colour food? I have twelve young birds from two pairs, very pale in colour. Will they alter in colour in their moult?—NOVICE, HACKNEY.

Novice, Hackney.—My advice to you is to purchase your colour food from one of the firms advertised in CAGE BIRDS, and mix it according to the directions upon the cannister. You should commence feeding the young when about six or seven weeks old, mixing just a little at first with the egg food, and gradually increasing the quantity. You have done exceedingly well in getting twelve young birds from two pairs thus early in the season. Don't worry about their being pale in colour. Young birds look very pale when compared with adults which have been colour fed. If carefully moulted your birds will, after the moult, be as rich in colour as their parents. In giving the colour feed the most important thing to remember is regularity of feeding, and not to leave off the colour feed until the birds are quite fine in feather.

Strange Death of Canary.

Can you advise me on feeding young Canaries, as three died when four days old, one died when 13 days old. When I was throwing it away I noticed a lump in his throat. When I examined it I found three hemp seeds in his throat, and I put it down to that.—J.W.J.

J.W.J.—Your feeding is perfectly correct, and I can only suggest that the weather may have been the cause of the death of the very young birds. As to the older one, although I have never before heard of such a thing, it is quite possible, nay, more probable, that the hemp seed caused its death. It is very strange indeed for one of the old birds to choke one of their young in this way by putting whole hemp seed down its throat. It is possible that one of the old birds is suffering from some affection of the throat or mouth, and thus cannot shell the seed properly before giving it to the young. I should advise you to watch the old birds to see if this is so.

The Keeping of Eggs.

C. Francis.—Canary eggs will not keep the same length of time as the eggs of larger birds such as Pigeons or Poultry. I cannot say exactly how long they will keep, and I doubt if it has ever been definitely determined. Further, eggs vary in their capacity for keeping. An unfertilised egg will keep double the length of time that an egg which has been fertilised will keep. I have known fertilised eggs to be kept ten days and then hatch; some will not hatch if fresh laid. To determine exactly how long eggs will keep would mean a long series of experiments, and the destruction of many eggs.

Colour Feed.

G. Bleach.—The sample you send is not very special, and I should not care to use it; in bulk, however, it may be all right. You say it is "Tasteless Cayenne Pepper," but it looks to me a mixture.

Red-Mite in Nest.

W. Holmes.—(1) You should change the bird into a fresh cage, give a clean nest well sprinkled with Keating's Insect Powder; place a little essence of qnassia in the bathing water. (2) The secretary of the Leicester C.B.S. is Mr. J. Heighton, 65, Biddulph Street.

A Tale of Woe.

I paired a pair of Norwich, hen laid two eggs, then died; paired Norwich cock to German hen, she laid four eggs, sat them one day and died; then I paired Norwich cock to another German hen, she had five eggs, sat on them five days then left them, and has since been like a ball of wool on perch, panting, and with head under wing. All seemed in champion condition till I started breeding.—J.W.

J.W.—Yours is indeed a tale of woe. You know the old story about the long lane, and I most sincerely hope you have ere this found the turning in yours. Your feeding reads all right, and having given the matter very careful consideration I can only come to the conclusion that some portion of the food that you have been giving has caused inflammation, and death. Have you been very careful in seeing that all food and drinking vessels have been kept sweet and clean? Do you mix the egg food fresh each time of feeding? Thousands of birds suffer and die year by year through the mistaken economy of their owners in giving them food in which decomposition has commenced. For the hen which is still queer I should advise a diet of boiled milk and bread, giving it fresh three times a day, and place 2 or 3 drops of syrup of buckthorn on the top of each portion when given. Stop the hemp seed, and carefully wash all green food in clean water, in which you have sprinkled a handful of salt. Carefully examine the seed you are using; it may be the cause of your trouble is badly harvested or kiln dried seed. If you care to send me samples, I shall be pleased to give you my opinion on the same.

BRITISH BIRDS, MULES AND HYBRIDS.

Answered by G. E. WESTON.

A "Mixed" Aviary.

Beginner.—It is quite possible to keep certain British birds in the same aviary as certain foreign birds, and a very handsome and interesting collection such a mixture makes. Exactly what Britishers you can keep, however, depends on the sort of foreigners you desire to go in for. You must address a query to our Mr. Page for advice on matters concerning the latter class of birds. Your aviary, 8 by 5 by 7 ft., if roofed in all over, will comfortably accommodate two dozen to thirty small birds. I am afraid you will be rather late for any results in the breeding line this present season. Any breeding, of course, will be accomplished in the aviary when the birds are flying loose. It is not altogether a satisfactory method to cage part up and leave part flying about, for the latter distract the former in more ways than one. The late Dr. Greene's two books, "British Birds for Cage and Aviaries," and "Foreign" ditto, price 3s. 9d. and 2s. 9d., respectively, post free, would be very helpful to you. They may be had from this office. Gold finches, Bullfinches, Linnets, Lesser and Mealy Redpolls, Twites would be safe companions for your foreign birds; while a Greenfinch, Tree Sparrow, Snow, Cirl, and Reed Buntings would probably also be found admissible.

Thistle Seed; a Linnet.

M.G.M.—The sample of thistle seed you send is the correct kind for birds. The dealers name for it, so far as I know, is simply "thistle seed." But, of course, there is more than one kind of thistle seed, and the bird keeper needs to be sure he is getting that kind which is suitable for birds. The proper thistle seed is somewhat smaller, perhaps, than niger seed, and somewbat similar in shape, and of a mottled greyish-brown colour. The thistle seed sold bird-keepers which is of no use as a bird food, is a considerably larger, bulkier seed, darker in colour, and having a heavily-ribbed appearance. Keep a little of the seed you now have always by you, and see that you get similar when buying more. The "baldness" will not prevent your Linnet breeding if he is otherwise in full health and song, and carrying a deep, slaty-blue coloured beak. When you changed the room a second time you may have caused him to lose a few feathers in a cross moult. In all likelihood the bare place will not be covered with new plumage until after the next moult. Let the bird have a feed of dandelion, shepherd's purse, and similar seeding green foods every day.

Concerning Philomel.

Colour Food.—Most certainly Nightingales will sing when kept in captivity. You must surely be a new hand at bird keeping not to have known that fact already; this I mention with a view to warning you that a Nightingale is not by any means the sort of bird a beginner in the keeping of insectivorous species should try his prentice band on. Gain some knowledge concerning such before you touch 'Gales. Cock birds caught in the early spring, before the females reach our shores, are about the best one can get. Skill is required to "meat them off" and get them used to caged existence. Those caught just before they start on the autumn migration are also good, though usually apt at first to be a bit lively. Only an experienced fancier can possibly tell cocks from hens; both look practically alike. Hen Redstarts are often sold the unwary as cock Nightingales. Nightingales vary very much in price. I have seen them advertised at 5/- and 7s. 6d. But I very much doubt if a fancier who had one really steady and on song, and who was prepared to guarantee it so, would sell under from 30s. to 50s. For one thing, a fresh-caught Nightingale costs three or four shillings in food, usually, before it can even be considered properly "meated off." How, then, can fanciers expect to really get the latter for just a few shillings?

Minds that Think Alike.

Hopeful.—It is certainly extraordinary that your two Bullie hens should be amicably proceeding with their domestic duties in the same nesting receptacle. If they were mine, I should certainly let them go ahead, just to see how the home-sharing arrangement turned out in the end. If they don't disagree in the near future, you can't go far wrong by so doing. If they commence to squabble—well, you must perforce remove one or the other of them out of the indoor aviary. You might try hanging another nesting receptacle close up by the side of the one now in use. I can quite believe, however, the two hens would sit side by side in the same nest. I once saw an even more extraordinary sight. In an indoor aviary a Canary had built her nest on the floor, at the foot of a stump which served as a centre perch, and had one youngster therein, a fairly well-grown baby, too. The curious part arose in the fact that another hen had laid her eggs in the same nest and was calmly incubating them! Thus one had the astounding sight of a hen sitting on her eggs in a nest containing a young bird some ten days old, which was being fed by another hen—the original builder of the nest! Being built on the ground (mainly of dried grasses), without box or pan of any kind, it was of course, rather more expansive than the usual nest. The youngster nestled close up to the sitting hen in the intervals of feeding. "Uncle Peter," most veracious of persons, can vouch for the accuracy of this story.

A Varied Trio.

Louie.—(1) The best food to get a rich breast colour on a Bullfinch is a free supply of blackberries during the moult. When they are going out of season, change on to privet berries, which will be just coming in. The tops of heather, dock, nettles, and other wild seeds and berries, are also excellent things to give. (2) Three nests in a season are not too many for a sound young hen to undertake. Let her go ahead on number three by all means, especially seeing that the cock bird lends her such signal help in the feeding line. (3) Young Canaries six weeks old can safely be put into a flight cage. It is generally safe to turn them into one when they are four weeks old. The fact that the baby cock birds are trying to sing speaks well for their excellent health and condition. In future kindly remember that queries for different departments must be written on separate sheets of paper—vide rules—or you run the risk of not getting an answer.

Goldfinch Ailing.

A. S. Robinson.—It is possible your Goldfinch may have a touch of liver trouble. Anyway, I should, I think, separate him from the hen Canary until he recovers his wonted liveliness. Crush a chlorate of potash lozenge and mix it with half a teaspoonful of sulphate of soda. Of this mixture, take as much as will lie on a shilling and dissolve it in two tablespoonfuls of drinking water, which leave on the cage for one day. The following day give plain water; the day after stir half a teaspoonful of dandelion juice (taraxacum) in it. Repeat the taraxacum for three days. I have never found hemp harm a Goldfinch. Leave the linseed out of the mixture and substitute maw seed. Give dandelion heads and a few young leaves, by all means. I think you will find your bird recovered at the end of this treatment, and in song again.

Mule not in Stout Song.

Anxious to Know.—Of course I can't say definitely without seeing the bird, but I should say it is much more likely to be a Linnet-Canary than a Linnet-Goldfinch. Anyway, if a cock bird, it should be quite easy to decide which variety it is. If it were the latter, it would show the Goldfinch beak, blaze, and wing bars and markings in a quite unmistakeable manner. A Linnet-Canary Mule is just a sober-coloured brownish bird (like a Linnet) with white edging to the wing flights, and a flush of Canary (yellowish) colour in the region of the head. If it is the Hybrid you mention, however, that might account for your thinking he "does not bring out his full song," for a Linnet-Goldfinch does not sing the loud, rattling kind of song indulged in by either Linnet or Goldfinch-Canary Hybrids. You had better write me again, if, from the above remarks, you are able to decide the identity of the specimen. The packet Finch mixture sold by any good firm of seed vendors would suit your bird, if you don't want the trouble of preparing a mixture yourself. Go out and get him some seeding dandelion heads daily, together with a few young, tender leaves.

Advice about a Bullfinch.

F. H. H. Fulham.—You will have to get rid of the red-mite, or your Bullfinch will certainly get even worse in plumage. The cage should be either stoved in a moderately warm oven for 15 minutes or so, or soused with boiling water or soap-suds, whichever seems best to you. If of wood, it should then be well coated inside with sanitary washable distemper. You can dust the Bullfinch with Keating's Insect Powder. Or you can dip him in a bath (with the cbill off) containing quassia, taking care he does not take cold whilst drying. Never fear, he has not got "surfeit"—he wouldn't be lively and singing if he had. Don't bother with medicine. The following would make him an excellent stock mixture:—Canary and teazle one pint each, summer rape half a pint, maw a quarter pint. Give, in addition, about a dessertspoonful of sunflower seed daily. A feed of mixed packet seed (get a good make) or Finch mixture, once a week, would do nicely for a change. Let him have a little ripe apple, pear, banana, and any other likely fruit; also black, straw, privet, haw, etc., berries when in season. The great mistake most keepers of Bullfinches make is to keep their birds without fruit. They forget that Bullie is by nature a great fruit and berry eater, with a beak specially designed to that end. Dandelion, shepherd's purse, chickweed, plantain, dock, charlock, hard-heads, thistles, and many other green foods and wild weeds are relished by him.

An Egg-Eating Fiend.

Jumbo.—Hens which persist in smashing and eating every egg they lay are a—well, to put it as briefly as possible, a nuisance. Your own Bullie hen would seem to be a particularly virulent kind of nuisance. If you could try her in a good-sized aviary, you might find this alter her. I have also known "faked" eggs cure an egg-eating hen; have used them successfully myself, in fact. Here is the recipe: Take any clear egg, and, with an egg-drill (used on nesting expeditions), bore a fair-sized hole in one side and eject the contents in the usual way. If you have not an egg-drill, the side can be punctured and gradually broken away with a needle-point to allow the contents to be got out. Then make a mixture of mustard and cayenne pepper (the hottest sample you can lay hands on), with a little water, and fill up the now empty shell with this delectable "cream." Over the hole stick a little thin court plaster, or gold-beaters' skin. After dark (or as near it as possible) slip this "egg" quietly into the nest (often it will do placed on the cage bottom) of the hen addicted to egg-eating, and take yourself off to roost. Don't go into the bird-room too early the next morning (not, of course, from fear of hearing any unladylike language), and repeat the "faked" egg again at night. One experience is generally all-sufficient; Still, hens have been known to seem to rather like it. Let me know how you get on, and I will advise you further, if necessary. I may add that I have also cured egg-eating Goldfinches by the above dodge. Hen Siskins are very different in appearance to cocks, being very grey looking, lacking almost entirely the bright yellows and greens of the male. They have a more striped appearance.

Colour-Feeding a Greenfinch.

A. Wilson.—It is usually a very difficult matter to get a Greenfinch (and other Finches, too) to eat colour food made in the usual way—viz., with egg-bread. Most have to be "judiciously starved" on to it. There is a risk, of course, of them being upset and succumbing during the process. Some fanciers get over this difficulty by gradually accustoming the birds to eating ground up seeds (canary, linseed, and maw, generally). Then, about the end of June, they commence adding a little colour-feed, working up the strength by degrees. One or two large firms in the seed line sell seeds with the shells removed (some, I fancy, terming these "cooked seeds"), which, of course, can readily be treated with colour food. Both crushed and shelled seeds absorb the colouring agent quite well. A certain successful fancier of my aquaintance, with a liking for colour feeding Britishers (especially Bullfinches), uses crushed linseed only as a vehicle for conveying the pepper. You must experiment and find out which way, or ways, best meet your own case—there is no "royal road" as with Canaries, unless it be with hand-reared British birds. Any yellow feed of repute would answer—most fanciers use red-feed, however. Moult him in a good-sized cage—flight cage, if you like, providing he is very steady at present. The quantity of colour food depends on the bird—a rich yellow Greenfinch would naturally need less than a dingier-coloured one. One in four ought to be the outside strength necessary; one in six or seven might suffice. Use your own judgment. In my opinion, an overfed Greenfinch is spoiled.

Backward in Coming Forward.

Tatters.—Your hen is unusually late in coming into breeding condition. Are you sure she is a young, vigorous bird? Your feeding does not seem to have been over generous, however, and this, in conjunction with the peculiar weather we have experienced, may account for it. Instead of sugar, put a piece of cuttlefish between the bars of the cage. Give a teaspoonful of egg food every day, and mix amongst it four spots of Parrish's Chemical Food. Let her have (the Linnet as well) a few small tender dandelion leaves, also seeding heads, every day. Also mix maw and niger seeds in equal parts, and hemp and linseed; put a teaspoonful of the former in the cage one day, and a teaspoonful of the latter the next. This treatment should soon put a different complexion on matters, especially if the south wind and the sun should by any chance come to stay amongst us. It is usual to remove the first three eggs as laid, substituting a dummy, removing the latter and returning the former on the evening of the day the third egg is laid, when the hen usually settles down seriously to the duties of incubation.

Hand-rearing Again.

G.W.M.—I shall have written sufficient to fill a book on hand-rearing before the season is over. It is not to be thought because I do not mention methods of hand-rearing advocated by others that I necessarily disagree with those said methods. I could not possibly, in this column, mention them all in the space and time at my disposal. I have but a few short hours every week to get through the answering of many scores of questions on almost every conceivable aspect of bird-keeping—and inconceivable, too, sometimes. Young Blackbirds and Thrushes, for instance, can be successfully reared on many different foods. New milk can be used to moisten it with (or it may be boiled and used either luke-warm or when cold), or water will answer, or a drop of water can be given at the conclusion of each feed. Read also the replies to "A. P. Abbeywood" and "A. Rushen" in last week's issue. As the birds grow and commence to leave the nest, add a little finely-minced green meat, say lettuce, to their food. You must keep nestlings cosy and warm. A spare room is not suitable during such weather as we have experienced this spring; a snug, warmed kitchen being much more to the purpose. The nest, or basket containing it should be well wrapped up at night. Don't omit to put a pinch of tiny, yet sharp, grit amongst the food occasionally; or a pinch of crushed cuttlefish bone; or alternate them. Nestlings must also be kept scrupulously clean, or they will not thrive.

Dandelion Heads.

J.H.H.—The method I myself adopt for getting dandelion seed from the heads for storing purposes is a simple one, yet at the same time effective. Only really ripe heads are gathered—just as they form "clocks" and are ready to blow—and these are dropped into a capacious brown-paper bag. The latter is given a good shaking up, when the ripe seed drops to the bottom, and the "fluff," etc., can be taken out by the hand and deposited in the dustbin, or be burnt in the garden. The seed can then be placed in a fine sieve, and other waste particles be blown away off the top, after which it can be stored away. Tins can be used for the latter purpose, though sack or linen bags are best—providing the room is dry and free from mice—giving them an occasional shaking up. Thistle and other wild seeds can also be collected and stored by adopting a similar procedure.

Hand-rearing Hawfinches.

Will He.—I am glad to learn you reared the young Bullfinches so satisfactorily on the food, etc., recommended in my column. You cannot improve on that treatment for rearing the young Hawfinches also. Give these young birds cut-up mealworms freely, also give them a fair allowance of soaked and sprouting rape seed amongst the food as they begin to get well-feathered, and don't forget an occasional pinch of small, sharp grit amongst it, too. You can shell and crush a few sunflower seeds when you are feeding, fairly frequently, and mix them amongst the soft food; it is a very good, nutritious seed. As the youngsters begin to pick for themselves, let them have a free supply of sunflower seed (with others, of course), over which a rolling-pin, or jam jar, has been lightly passed, just cracking it. Also then offer them soaked summer rape, seeding shepherd's purse, etc., including young peas when you can get them.

Deformed Claws.

A. T. Allen.—When the front toes are all curled up in a bunch under the ball of the foot, treatment is very difficult, and often quite unsatisfactory. If they seem quite stiff and set in this position, I am afraid the Chaffinch promises to be a cripple for the remainder of its life. I once cured a young Mule by binding its foot on top of a fairly wide perch (or rather, about three-quarters of an inch of perch material) with silk, and then putting it, for a fortnight, in a cage without any perches in it. I cut notches (or grooves) in the soft wood for the toes to go in, so the thing did not slip. It looked a fearfully clumsy contrivance; but it answered in this case. With an old bird (and you do not say how long it has been affected) the case might well be different. A reader in CAGE BIRDS some little time back advocated placing the foot out on a piece of suitably stout cardboard, and "stitching" the toes into position on it (with silk, I should fancy), leaving the cardboard on for 12 or 14 days. You might care to try this. In any case, don't bind the toes down too tightly, and after you take off the appliance, let the perches in the cage be thin for a time, say, quarter-inch to three-eighths. It might be well to gently massage the toes with Zam Buk before tying them up; also whilst in position.

Fertility of Eggs; Soil for Aviary Floor.

K. Megan.—I do not see any objection to the floor of an aviary being composed of the natural soil—so far, that is, as the use of the soil itself is concerned. Of course, it would need raking over, and the surface renewing from time to time, as seemed necessary, just in the same way as any other similar material. If your aviary is a smallish one, and not roofed over (or only partially so), I do not then recommend you to stick to the earth floor, for the drainage is usually so bad that any continued rain simply converts it into a morass; it holds the wet, too, and the birds get the mud on their feet, and convey it all over the place. A layer of sharp gravel on a foundation of broken brick (or rubble) is unquestionably hard to beat as a covering for an aviary floor. The heaviest rain affects it but little, and it is quickly dry. To test the fertility of eggs is a very simple matter after they have been sat on six or seven days. Get a piece of dark brown cardboard, the size of a postcard (if black on one side, so much the better), and cut a hole in the centre a little smaller than an egg. Hold this board in front of a strong light (a window will do) and hold the eggs to be tested in front of the hole. If they admit the light through they are unfertile (i.e., clear), but if they are opaque (dense) they are fertile. An experienced fancier can tell fertile eggs at a much earlier stage than the above, for blood-vessels begin to form inside fertilised eggs very shortly after incubation has started.

Concerning Hawfinches.

T. Brown.—With regard to hand-rearing Hawfinches, see reply to "Will He" this week, and the reply to "Bird-lover" two weeks ago, for fuller information. To colour-feed hand-reared Hawfinches is quite a simple matter. Keep them used to eating a little soft food, either egg food or a good insectivorous mixture, and introduce the colouring agent amongst this gradually. "Full strength" depends on the original colour of the bird, but for a jonque a proportion of one in four, or one in three at most, should be ample. It is doubtful whether buff Hawfinches "take" the colour food to benefit them, so far as enhanced depth goes; and a good jonque certainly does not need colour-feeding at all. To get an adult-caught Hawfinch to eat colour food would probably necessitate your adopting the process known as "starving him on to it," and in doing this, of course, you stand an excellent chance of losing the bird altogether. For an adult Hawfinch the principal food is sound, plump, white sunflower seed. Given this, and a mealworm or two every day or so, the bird asks for little more. The mealworms, however, should be given direct from the fingers; a little patience, and he will take them fearlessly, so great is the bird's love for them. They are an invaluable agent in steadying a Hawfinch. The bird also appreciates hemp, linseed, canary, oats, and sometimes a little buckwheat, dari, groats, summer rape, small maize, etc. His powerful beak makes short work of beechmast, walnuts, plum and cherry stones, hawthorn, privet, etc., berries, and the like. One never need be fast for dainties acceptable to the Hawfinch. Green food they are not particularly keen on, but appreciate a little young lettuce, watercress, chickweed, shepherd's purse, also ripe apple, pear, etc., occasionally. They make an exception in favour of

tender green garden peas, of which they are passionately fond, and these are especially good for young birds, given in the pod. They are fond of a bath, so let him have one whenever the weather is suitable. See his perches are of proper thickness, and if food and water hang outside the cage, see also that the bead holes are of proper size.

Two Too Many.

K.D.F.—Three questions at a time are supposed to be the limit, my good friend, not five. (1) If the lump on the neck is hard (solid) to the touch, paint it once daily with a little tincture of iodine, obtainable from any chemist. If it seems to be full of pus (matter), it should be opened, and this gently squeezed out. Wash it afterwards with warm water coloured with Condy's Fluid, and anoint with a little of any healing ointment. If you use iodine, don't let it touch anywhere other than the hard place. (2) Meadow Pipits can be hand-reared by the methods recommended at length to "T. Nagle" in our issue for May 18th. The young should be taken when from ten to twelve days old. It may be necessary to "cram" them once or twice at first (it usually is), but they will soon learn to gape to be fed. (3) If you took the Great Tit's nest and eggs, and caught the old bird at the same time, and transferred the lot—lock, stock, and barrel—to your aviary, she certainly would not be at all likely to proceed with the incubation and hatch and rear the young. It is a great idea; but, alas, unworkable. (4) Ivy berries are eaten by most members of the Thrush family (the Missel in particular) during the stress of winter. You could try them in captivity; I don't remember ever having done so myself. (5) Kingfishers are nasty birds to hand-rear, and nasty birds to keep in confinement, unless in a very large aviary containing a pond or stream. I don't advise you to try to hand-rear any, though, as you say you can get plenty of small fishes, water grubs, etc., you would have little difficulty in doing so. The excreta is most offensive; the birds "smell to high heaven," as the poet says—like three fish shops rolled into one, as a friend of mine puts it, who once tackled the hand-rearing of two nests at the same time.

Hand-rearing Starlings.

F.O.—You will have no difficulty whatever in hand-rearing the young Starling on the lines you mention—viz., those recommended by me for rearing young Thrushes, etc. You can certainly occasionally moisten the food with water instead of milk, and a vessel of water should be put in the cage when the bird commences to pick about for itself. You must, however, give it animal food of some kind, either mealworms or small garden worms (cut up to a suitable size), while the caterpillars you mention, if of the smooth variety, would answer admirably. Also you could scrape a little raw lean mutton amongst its food fairly frequently. When it commences to feed itself, give a good insectivorous mixture designed for the coarse-feeding Softbills, and let it contain finely-minced lettuce or other green-meat in liberal quantity. You can safely let the youngster have its liberty when from eight to ten weeks old; though maybe you will not feel inclined to take this course, as hand-reared Starlings make really delightful pets—very knowing and imitative little beggars, with an aptitude for picking up a few words, though not all acquire the latter accomplishment.

A Batch of Brevities.

Melon-coloured Legs (Starter).—You say you have a Goldfinch with "melon-coloured legs," and want to know whether that fact will affect him muling, or on the show bench. The answer to both is, no—providing, of course, he is good enough at other points, viz., in condition and in show properties. I suppose it is a sign that the bird has been house moulted—usually referred to as being "white-legged," though "melon-colour" would fit many of them.

Weeds and Herbs (Cissy).—I do not know of any book which deals with weeds and herbs from the point of view of food for birds. An elementary work on wild flowers (obtainable at most book shops) would help you to identify the kinds usually advocated. A really thorough work, well illustrated, would cost, probably, 5s. to 10s., second-hand; call and inquire at some of the second-hand bookshops in your city.

A Point About Hedge Sparrows (C.P.).—Your friend, of course, is absolutely wrong (absurdly wrong, I should have said, had you not appealed to me to take the question seriously). No bird performs the act of procreation in the manner described.

An Aviary Matter (W.H.P.).—You are to be congratulated on possessing so exceptionally good an aviary. You can safely turn another cock Goldfinch and hen Bullfinch therein. It might be well, however, if you kept the couple together in a large cage for a week before releasing them. When the young birds come, the chief thing to provide is plenty of the seeding green foods mentioned in this column. A dish of made insectivorous food, and some small mealworms (also any small grubs and smooth caterpillars) are also likely to be eagerly utilised; likewise any sprays of foliage covered with blight (green fly).

Young Owl (Breathless).—I don't know that a young Owl would be of any great value when stuffed, but it would make a nice ornament for your drawing room, no doubt. They are very pretty creatures when still in their first plumage. Any taxidermist would set it up for you; see several advertisements which have lately appeared in our columns. It is against the rules to recommend any advertiser in particular.

A Question of Identification (Constant Reader).—The birds you saw with a white rump, conspicuously shown when flying, were undoubtedly Wheatears. They frequently build in holes in stone walls. They are not particularly difficult to hand-rear; follow the method I advocate for Softbills. As there is no question of song with this species, it is well to hand-rear them, when, of course, they are delightfully steady.

Dead Siskin (Miss D.).—As the Whitsuntide holidays intervened between the corpse reaching me, I did not care to get too close to it. Kindly read our post mortem rules, when you will see that bodies for opinion as to cause of death should be sent direct to Mr. North (Reading), who undertakes the duties in this direction.

Ailing Linnet (No Name).—Give your bird plenty of maw seed to eat; also small dandelion leaves and seeding heads, likewise seeding shepherd's purse and chickweed. In its drinking water for three or four days put some dandelion juice (taraxacum), obtainable from any chemist—in the proportion of half a teaspoonful to two tablespoonsful. Give him summer rape seed, and only a little of the black (bitter tasting) rape.

Respecting a Mule (H.M.).—I find it very difficult to understand your question. If the Mule's wings droop naturally, you cannot do anything to alter that; nor can you alter the length of its legs. You puzzle me. As you say the bird is a good singer, it must be in good health, and I advise you not to try any experiments or dodges with him—let well alone. The cage is a curious shape—it would be better 16 in. long, 12 high, and 9 wide—and without a round top. Mules are better in a box cage (wired in front only), and with two perches placed on a level. Your top perch is too near the top of the cage.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S., M.B.N.H.S.

Yellow Budgerigars Weak on Legs.

My birds seem to have got cramped, and appear to be in pain with their feet and legs; the hen is the worst. Is there any remedy?—A. CUMMING.

A. Cumming.—I am of the opinion that the weakness in your birds is constitutional, and that little or nothing can be done for them. If this is the case they will get worse instead of better, and become miserable looking objects. All you can do is to put them on a course of Parrish's Chemical Food, well colouring their drinking water with same, and if there is any sign of constipation make their drinking water just saline with Epsom Salts till relief is given. Add to your diet a liberal supply of grass in flower (i.e., grass in the ear). Keep them in some position where they will be free from draught, yet get plenty of fresh air. If there is no improvement in their condition in five or six weeks' time, I should certainly advise you to mercifully chloroform them out of the way. I should not attempt to breed from such birds, as their progeny would probably inherit the weakness in a more pronounced form.

Grey Parrot in Poor Condition.

My bird is three years old, feed as advised in "C.B." Though I have had it two and a half years it has never moulted. It is very mopy, breathes heavily, and makes a rasping noise. Have given it ipecacuanha wine, oxymel of squills, and glycerine. Can you suggest any remedy?—F.M.W.

F.M.W.—I am rather at a loss to account for the condition of your bird. I presume that it does not get any table scraps or slops, as such would soon bring about such a state of affairs. A healthy bird should have moulted before this. Take it into your warmest room, keep it out of draught, yet where it will get fresh air. For one day make its drinking water quite saline with Epsom Salts, and repeat this as necessary to keep its bowels moving freely, but not watery loose. When not giving the salts, well colour its drinking water with Parrish's Chemical Food. Keep up a liberal supply of ripe fruit, green food, and cuttlefish. Unless there is something amiss which your note fails to indicate, it should soon recover its normal condition. If you are satisfied the bird has caught a chill, you had better continue to give the ipecacuanha mixture, in lieu of the Chemical Food till relief is given. It would be better to report progress in a fortnight's time.

Budgerigars Not Breeding.

A.B.—I really cannot give you any further help than that contained in my previous reply, together with the treatment you have been trying in the interval. I may, however, suggest one or two things, which if they exist should be removed at once. Are the birds in any draught? If so, you must take measures to remedy this. Are the sexes of your birds equal? As I read yours, it appears you have more males than females; if so this would account for much of the trouble you have had with these unusually most hardy of birds. It also appears to me that your birds (the hens at any rate) are in very low tone, and I should advise you not to attempt breeding for six or eight weeks at least with them. Put them on a course of Parrish's Chemical Food, and supply green food (grass in flower, etc.), and cuttle fish ad lib. Note: They must have plenty of fresh air, yet not subjected to draught.

Budgerigars Dying.

I bought a pair of these birds, they arrived safe, and in the pink of condition. I put them in a Canary cage in my aviary containing three Indian Green Parrakeets, so as to get them used to the other birds before letting them loose. The first day one died, the next the other. What could be the cause?—UNFORTUNATE BREEDER.

Unfortunate Breeder.—There is no doubt but what the Indian Green Parrakeets gave these birds a blow on the head with their beaks; it is always best to have the bodies examined in such cases. If your aviary is an outdoor one, and the cage was in the outer portion, such nights as we have had recently would be quite sufficient to account for the death of even such birds as Budgerigars. From your details I can suggest no other reason. As to treatment of these birds, there are several replies in this issue that should help you. I am of the opinion that the birds would have fared better had they have been turned into the aviary straight away. The larger Parrakeets as a rule completely ignore such small fry.

Nuns and Zebra Finches.

(1) Is there any difference in plumage of male and female Black-headed Nuns? They appear exactly alike to me. Will they nest? (2) Zebra Finches built nest, laid nine eggs. Is this an unusual number?—HEREFORDSHIRE.

Herefordshire.—(1) The sexual distinctions are infinitesimal, and need a practised eye to discover them. The male when fully mature has a black stripe down the centre of abdomen, this is almost obscured by the brown feathers in the female. I have not yet heard of any instance of these birds breeding in captivity. Yet there is no reason why they should not. (2) I presume your birds are as yet only playing at nesting (unless you have two hens), and that none of these eggs will hatch. I presume you know these attractive little birds, the male has chestnut ear coverts, and the sides are also chestnut, thickly spotted with white, and the under surface is composed of black, white, and grey. Five eggs has been the usual number in my aviary.

Soft Food, etc., for Cage Birds and Finches.

(1) What is the correct diet for Green Lovebirds? (2) Are these the same as Madagascar Lovebirds? (3) Do you advise the use of insectivorous food for Lovebirds, Saffron and Zebra Finches and Brown Nuns?—NAVY.

Navy.—(1) Canary and millet seed, green food, cuttlefish, grit, a few white oats once or twice a week, and water ad lib. (2) The female Madagascar is an all green bird, the males having the whole of the head and neck a sort of pale lavender grey. The Passerine Parrakeet (Blue-winged Lovebird) is also a green bird, the male being adorned with ultramine-blue in the wings and rump. There are also several species of South American Lovebirds, one species of which is at present on view in the Parrot House at the London Zoo, viz., the Guianese Lovebird; it is all green, and much smaller than the Madagascar. (3) A good insectivorous mixture must be given to Saffrons, Zebras, Nuns, etc., when they are feeding young, and a little is wholesome as a regular item of the diet for such species as will eat; but though such species of Lovebirds as I keep with my Finches indulge in it, and take no effect, probably because of the space they have for flight and being in the open air, I should not advise it for them when kept in cages, and should not give to such even when in the aviary when unmixed with other birds, such as Finches, etc., the diet named in answer 1 being ample for them.

Blue-fronted Amazon not Talking.

(1) I have had the bird fifteen months and it makes no attempt to talk. Do you mean that the same words should be said over and over again, by constant repetition? (2) It is fed as you advise, but it eats the hemp and sunflower and does not care for the rest. Are these two sufficient? (3) Will it do to put the maize in without boiling?—W.R.

W.R.—(1) Occasionally a specimen comes to hand which refuses all advances, but it is uncommon with the Blue-front, most individuals of which make good linguists and mimics. Keep it where it will hear plenty of conversation, and also try the constant repetition of such words and short phrases as you wish it to learn. Yes, my meaning is say the one thing over and over again at intervals, and keeping at the one thing till it is learned, and then taking up a fresh one, and so. Many individuals, however, pick up the bulk of their vocabulary from the general conversation which they hear. If convenient it is good practice to keep such a bird, once it is tamed, in the general living room, and it should soon pick up what it hears. (2) As your bird objects to the small seed you can leave out the canary seed, but the other give as named; fill its tin up daily, and do not give any more till the next day unless it has emptied it. It will first take the sunflower and hemp (as do many species), and then satisfy its hunger during the day on the other seeds. (3) If it eats sufficient of the dry seed mixture to keep itself in condition the boiled maize is not necessary, but a little given occasionally is a wholesome change of diet.

Young Grey Parrot Ailing.

The bird was bought a fortnight ago. For the first few days it seemed to do well, but now it is mopish, and only rouses up for its food; its bowels are watery loose, and it makes no attempt to talk or whistle. How can I treat?—B.K.B.

B.K.B.—The conditions under which these birds are imported to this country leave many of them tainted with the germs of disease, which usually develops during the first weeks following arrival, and I fear that is what is the matter with your bird. Your diet is correct as to what you use, but I should advise filling its tin three parts full of the mixture, and then filling up with the boiled maize. For one day only put half a teaspoonful of Diuneford's Magnesia over the boiled maize, and for the next month or more make its drinking water the colour of pale port with Parrish's Chemical Food. Keep it in your warmest room for the present, and out of reach of draught. I should advise the prompt removal of its voidings, with a liberal and fresh supply of sand in the cage tray daily. It should be sufficient to give the boiled maize once daily, unless you see it is refusing the seed mixture, but I am of the opinion that the reason it is not taking this is that you are covering it up with a too ample supply of the boiled maize, and renewing same before the dry mixture is reached. Let it have a little of such ripe fruit as is in season daily, also a leaf of tender lettuce as opportunity occurs.

A Question of Food.

The bird has been fed on potatoes, beef, etc. On the plumage getting into bad condition this was stopped. He is now fed solely on hemp, sunflower, and Indian corn. Is this correct?—F.H.

F.H.—You must treat as advised in our previous reply. You will find correct diet given in this and recent issues, to which I must refer you. As I suspected the unnatural dict has caused the mischief, and it will be a work of time undoing same. Let it have as much cuttlefish, green food (fresh and tender lettuce, etc.), and ripe fruit as it will eat, also a few nuts, but no table scraps, sops, slops, or any other such unwholesome food. Wheat and dari added to your mixture would be ample, as from what it has been accustomed to it is possible it would refuse the smaller seeds. On all warm and genial days let it have a bath, or spray it if it will not bathe, but however warm the weather may be it must be kept out of draught till dry. It should ultimately recover condition, but will, I fear, somewhat tax your patience before this comes about. If you find it is pulling out its feathers, you must use the remedies advised almost weekly in this column, and persevere with them, for it is a work of time undoing the effect of a prolonged course of unwholesome food.

Breeding Green Budgerigars.

(1) I have the birds in a Crystal Palace aviary, 42 by 22 by 36 in., with two husks; they are fed as you advise, but the cock is mopish and out of sorts. Is the cage suitable? Will they breed in a room without a fire? Should the seed be mixed or separate.—NEW START.

New Start.—These birds are every whit as hardy as our native Sparrows, but no birds can stand draught, and possibly you have yours standing near a window, a fruitful source of disaster with birds, no matter how hardy they be. All wire cages I do not approve of, unless they stand in some position where draught cannot pass through them. A semi-box cage is the best type, by that I mean one having a wooden back and bottom, and the top and sides half wood and wire; in such a cage the birds can always find shelter from draught. They do not need any artificial heat; in fact, they are better without it. As soon as they are in condition they should breed. The seed is always best kept in separate hoppers, the birds can then make their choice without undue waste. I should advise making their drinking water just saline with Epsom Salts for one day, repeating same in a week's time. Put them on a course of Parrish's Chemical Food, well colouring the drinking water with same. Of course, when giving the aperient you will omit the Chemical Food for that day. Let the bird have a regular supply of green food, as much grass in flower (grass in the ear) as they will eat, and the same as to cuttlefish.

Budgerigars, Stanley Parrakeets.

(1) My Budgerigar is seven or eight years old, mopish, has growth on breast. Shall I destroy it? (2) What is the smallest cage Ribbon Finches will breed in? (3) Please give description, habits, price, etc., of Stanley and Beautiful Parrakeets? (4) What small Foreign bird would make a nice companionable pet?—BASHAU.

Bashau.—(1) I should destroy this bird; it is really the most humane way to treat it. (2) They have bred in an ordinary Canary breeding cage, but such is too confined, and in such the birds frequently become infested with lice. A good cage is one of the semi-box type, and 2½ by 1½ by 1½ ft. See reply to another correspondent in this issue. (3) No, they are two distinct species. Stanley (*Platycercus icterotis*). Beautiful (*Psephotus pulcherrimus*):—Stanley: Crown of head, back of neck, chest, and under surface generally, crimson; the upper surface is mostly black, each feather being bordered with green, yellow or crimson; rump and upper tail coverts green, with a golden sheen; two central tail feathers green, remainder light blue. Beautiful: Forehead, scarlet; eye region, pale yellow; crown and nape, blackish; back, greyish brown; sides of neck, shoulders, rump, and upper tail coverts, greenish-blue; a small patch of vermillion adorns the shoulder of each wing; central tail feathers, brown with bluish tips; the outer ones a variegated with black and greenish-blue; throat and chest, rich emerald green, most of the feathers being tipped with bluish; abdomen and under tail coverts, scarlet. The dietary of both these beautiful birds is simple, canary, millet and oats, green food, cuttlefish, grit, and water ad lib. The Beautiful is decidedly delicate on arrival, and is very rare. Their price would be what the dealers choose to charge for them. The Stanley was advertised in our last issue as Yellow-cheek Parrakeets at four guineas the pair. (4) Insectivorous birds as a rule are more confiding than seed eaters. Of the latter I have had in a large garden aviary, Diamond Finches, Ruficaudas, Zebra Finches, Serins, and Javas come and eat from the hand. There is scarcely an insectivorous species but what can be trained to do so with kindness and patience; as a rule the sight of a mealworm is sufficient to drive away timidity in their eagerness to get same.

Rock Parrot Pulling its Feathers.

Is this habit curable? The bird has now very few feathers on its back and breast. It is fed on Parrot mixture, maize, fruit, and potato. How shall I treat it?—W.J.R.

W.J.R.—Give your bird for its staple food the following mixture: Canary, oats, wheat, dari, Indian corn, hemp, and sunflower seeds in equal parts; also give ripe fruit, plain biscuit, boiled potato, raw carrot, green food, cuttlefish, grit, and water. Do not give any table scraps, sops, slops, or any kind of animal food whatever. Keep the bird as much occupied as possible; soak its plumage every other day with quassia solution, and persevere with this treatment. It is only necessary to soak such parts as the bird is in the habit of plucking. Give it pieces of some non-splintery wood, cotton reels, etc., to play with and chew up. If this fails you had better try a light collar round its neck, with a piece of steel chain hanging from same over its breast. It is always slow work curing a bird of this habit—many individuals never give it up once they are confirmed in it. Give it a cooling aperient occasionally, half a teaspoonful of Dinneford's Magnesia in about one ounce of water, and let it have only this to drink for that day. At the same time its bowels must not be permitted to become watery loose.

Foreign Bird Queries continued on p. 487.

POST MORTEMS.

Mr. J. North, 435, Oxford Road, Reading, will examine cage birds for a fee of 1s. 6d. each bird; for a reply direct, 2s. 6d.; analysis, 21s. Subjects for post-mortem examination must be sent packed in a box direct to J. North, with fee. Any sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.

Siskin (Meleta).—Chronic enlargement of liver, ending with apoplexy, the result of overfeeding.

Canary (W.H.T.).—Your bird died of softening of liver, giving rise to feverishness and pneumonia. It is thought the diet has been too stimulating, with an insufficiency of salad.

Canary (Singing).—Inflammation of liver, spleen, and lungs, ending with apoplexy. These are symptoms of "bird fever," and your other losses probably arose through the same disease.

Green Canary Hen (Miss A. Fielding).—Inflammation of liver and spleen caused death of your hen. These symptoms are suggestive of bird fever, and it would be well to disinfect the cage occupied by this bird. Cocks and hens kept in same room but in separate cages are prone to worry themselves and their owners by abortive attempts to carry out their natural instincts.

Buff Norwich Hen (F.B.).—Hen was not egg bound, but had "taken a chill," owing chiefly, I take it, to the fact that she had an enlarged liver, this organ then becoming inflamed, and a large blood vessel breaking. A gentle saline aperient, such as sulphate of soda, if given when first symptoms were observed, might have done good, or a liberal diet of salad during the last two months might have kept the liver in a healthier condition.

Breeding Hen Canary (W. H. Hunt).—The softened liver and excessive fatness indicate diet too heating, and I consider that this hen, and possibly your other five, have died from feverishness, partly owing to this cause and partly to the usual high temperature incidental to the nesting period. Your sample of canary food smells strongly of lard, which is quite unnecessary, and may have given rise to this unfavourable state.

GENERAL.

Answered by the EDITOR.

Scrutiny (D. H. Tedstone).—Yes, I shall be pleased to act as scrutineer for your club election.

The Mystery Solved (Oswald).—Many thanks for item, which had already been seen by us in the local papers. We thank you none the less.

Voices in the Night (R. Farmer).—We are indebted to you for forwarding this ingenious design, which made us "smile some."

Palace Prize Money (E.A.).—Rem acu tetigisti! Habeas caeoethes scribendi sed nihilo nihil fit. Suppressio est veri. Finitum est.

Suggestions (Edgar Broadbent and H. H. Jones).—Many thanks for your suggestions, which are having our careful consideration.

Judge's Name (E. L. and G. W. J.).—The initials must have crept in by mistake. I much regret the occurrence, and will see that it is altered this week.

Society in Brighton (A.H.).—The only society in Brighton is the Brighton Fur and Feather Association, and the secretary is Mr. F. Perrin, Turf Mouseries, Market-street.

Assistance (T. Dean).—We thank you very much for your kind recommendation of CAGE BIRDS. Such actions as yours are most encouraging to us in our efforts to make CAGE BIRDS all that its readers would have it.

"Cage Birds" Vol. X. (Miss Chatto).—Yes, Vol. X. can be obtained from this office, price 5s., post free. Your copy of the "Bird World" was sent. We are sending you another. Glad to know you are so pleased with it.

Foreign Bird Query (J. Pickering).—We much regret being unable to oblige you. Had you sent the query a day earlier it could have been answered this week. Our experts do not reside at the office, and queries have to be sent to them.

THE TYPE OF THE NORWICH PLAINHEAD CANARY.

Southern Breeders Meet to Adopt a Standard and Select a Model.

The matter of arriving at a standard of excellence and selecting a model for the guidance of judges and breeders of the Norwich Plainhead Canary was the chief item in the programme at the meeting of the Southern Norwich P.C. convened on May 23rd last at the "Raglan," Aldersgate-street.

What promised to be a most interesting evening's work, however, was more or less spoilt and rendered abortive by the apathy of those who ought to have been most concerned in the issue. Not to put too fine a point upon it, hardly a single prominent south-country breeder of the chubby ones put in an appearance, while the S.N.P.C. members present totalled but eight or nine, and had it not been for a number of visitors we should have mustered a very small company indeed. This result was not by any means a fair return for the energy and initiative displayed by Mr. F. S. Matthes, the hon. secretary, in the matter, but, neither discouraged nor dismayed, he is going ahead, and there is every prospect of something tangible being accomplished in the very near future. Mr. R. J. Pretty was elected to the chair.

The Chairman stated the objects of the meeting, and said the matter had been broached by Mr. Spillman, of Plymouth, from whom a letter was read advocating a decision being come to on the matter of type and colour, their relative value as exhibition points, etc., and giving as an instance of the need of such the case of a Norwich Plainhead which won at a big show in a big class one week, yet only got a minor card at a smaller show the week after in much less keen competition, though in quite as good form itself. The two judges were both well-known men.

The Secretary announced that he had received a considerable number of drawings from interested fanciers and others, which he proposed handing round the meeting. Mr. Matthes also said that the S.N.P.C. were working hand-in-hand with the N.P.C. and the Scottish N.P.C. in the matter, all three bodies being anxious to arrive at some mutually satisfactory decision. The N.P.C. were waiting the result of that meeting. Messrs. F. J. Martin (Battersea), Stewart (Glasgow), Lydon and Norman were amongst the senders of sketches.

While the inspection of the drawings proceeded Mr. Crisp rose and said that as they were far from being a representative body that evening, he did not see how they could come to any decision on such a momentous point as was before them. In any case, whatever they decided upon, it would, he gathered, have to be submitted to the N.P.C. for consideration at their forthcoming meeting, when, of course, it very probably might not meet the approval of that body. It was a subject beset with difficulties.

Mr. House thought the idea of the meeting a very good and very fair one, inasmuch as it showed that the northern breeders did not desire to force their own ideas on the southerners.

Mr. Ramsden said that, with all respect to those present, he felt there were more breeders away who knew more about the matter, and he certainly thought the big southern breeders and exhibitors should have a voice in it. He himself was more in favour of selecting a number of sketches to submit to the said breeders, and also to the south-country judges, for them to pick two or three which could be sent on to Mr. Raynes, the N.P.C. secretary, to be put before the meeting of the latter society.

Mr. Curtis suggested selecting six south-country judges, by the vote of the meeting, to look over the sketches and decide amongst themselves as to the best model. He said it was the judges who had to decide at the shows. Further, he felt that if certain breeders and exhibitors were selected, it would give rise to jealousy, as other S.N.P.C. members might consider they ought to have been consulted as well. Mr. Ramsden was in favour of the judges going through the drawings, posting them on to one, and asking him to post them on to the next judge. He would take not more than the three sketches receiving the highest number of votes from the judges, and submit them to the southern breeders to select the final one to be sent to the N.P.C. as representing their own ideal.

Mr. Crisp said that, as he had remarked before, it was a matter beset with difficulties. The judges might not find their ideal amongst the sketches. Let the judges submit their own ideals, and then let them decide which they will judge to. No doubt they did not all set the same value on certain points. One man might have experienced difficulty in getting colour into his own birds, consequently he favoured high-coloured birds on the show bench. Another might have had difficulty in getting short tails, and so have an inclination to favour that property when he saw it in the birds before him. Once get the judges into line, then the breeders *must* come into line, or they would not get into the cards. Was type only the thing to go for? That was what they all wanted to know; also, what valuation to put on the matters of size and colour.

The Chairman said he agreed with Mr. Crisp as to the difficulty of the question. He could quite believe that what the judges decided on might not please the breeders.

Mr. Ramsden pointed out that as there was a possibility of a contest taking place between all three of the specialist Norwich Plainhead Clubs, it was essential one standard of excellence should be agreed on by all.

Mr. Matthes said the Scottish N.P.C. had already decided on a standard of excellence and scale of points for judging purposes, and at the request of the meeting he proceeded to read it:—

STANDARD OF EXCELLENCE AND SCALE OF POINTS.

Standard of Excellence.

COLOUR: Deep, bright, rich, pure and level throughout.

SHAPE: Head, round, full and neat; neck, short and thick; body, short and chubby, with back well filled in; deep, broad, full chest.

FEATHERS: Soft and silky, with brilliancy and compactness.

WINGS AND TAIL: Short, compact, and good carriage.

SIZE: Well proportioned.

BEAK: Short and stout (clear).

LEGS: Well set back (also clear).

FEET: Perfect.

CONDITION: Health, cleanliness, and sound feathers. Streaked beak and marked legs not a disqualification, but count against the bird to its extent.

LENGTH: Not to exceed 6½ inches.

Scale of Points for Judging.

HEAD	15
NECK	10
BACK	10
CHEST	15
WINGS	10
TAIL	5
LEGS AND FEET	5
QUALITY	15
COLOUR	15
Total	100

Mr. Ramsden moved that this standard and scale of points be accepted by the S.N.P.C., and that the N.P.C. secretary be notified to that effect. He said he felt perfectly satisfied it was a fair and adequate one. Further, that he was breaking no confidences when he stated he had recently had a chat with Mr. Raynes, and so had reason to believe that the N.P.C. were themselves favourable to its adoption. Mr. Marley seconded, and the resolution was unanimously carried.

Mr. Crisp raised the point as to whether the ideal drawing selected could stand for both yellows and buffs—would not the neck in the former be thinner than in the latter? He knew it generally was so in Yorkshires.

Mr. House said this would not obtain in the "ideal" bird, which, of course, was understood to be depicted, for both yellows and buffs would be proportionate in all properties.

Mr. Crisp then asked whether, under the standard adopted, an exhibitor could lodge an objection against a bird in the prize-list for being over-length? It seemed to be the general opinion that this could be done, though a voice was heard to ask, "What about the judge's decision being final except in case of fraud?" Mr. Ramsden said that if a bird were given him as being 6½ inches long he would undertake to measure it either 6¼ in. or 6¾ in., as he pleased. The "exact" measuring of birds was exploded long ago. The judge could tell nearly enough whether a bird was over the proper length, and it was the judge who did his duty who had the fanciers' show under him.

Coming back to the model question, it was eventually unanimously decided, on the proposition of Mr. Ramsden, seconded by Mr. Curtis, that the whole of the models be submitted to six recognised south-country judges (residing within the area covered by the S.N.P.C.), to select the three nearest the ideal set forth in the S.N.P.C. standard of excellence these three to be then submitted to the S.N.P.C. committee for final decision.

Mr. Marley then proposed, and Mr. Matthes seconded, that the members of the S.N.P.C. be supplied with a list of all recognised south-country judges of Norwich Canaries, and be asked to select from it the six to whom the drawings were to be submitted, and this was carried.

Mr. Crisp expressed the opinion that if the judges could be prevailed on to meet at some convenient place and discuss the models, and the members of the S.N.P.C. be present, it might be a both instructive and entertaining affair. This, of course, raised smiles all round. Votes of thanks to those who had submitted sketches to the consideration of the Club, and to the Chairman for his services brought the meeting to a close.

PROPOSED FEDERATION OF LONDON SOCIETIES.

Also a Definition of a Novice to Govern all Societies within the Metropolitan Police-area.

For the special meeting of May 24th last, at the Old Napier, High Holborn, W.C., Mr. J. Tyson had invited secretaries or delegates from all metropolitan societies to attend and discuss the Novice question, with a view to arriving at a definition of a Novice which should be universal so far as London societies were concerned, and so put the novices in all of them on an equal footing. An independent fancier (representing no particular society) was elected to the chair, in the person of Mr. Turner.

Mr. Crisp said the crux of the whole matter appeared to lie in the point as to whether the amateur section should be allowed to stand. Under the C.B.U. rules, governing the open shows, there would be no amateur section. At members' shows, of course, societies were left to decide as they pleased. Personally, he considered the amateur classes a useful "half-way house," in which the fancier could gain experience, when no longer eligible to compete as a novice, before being compelled to "face the music" amongst the champions. Unfortunately, almost every London society differed in its interpretation of what constituted a novice. He was in favour of submitting all the definitions at present in vogue to each society concerned, to select the best one out of them, each society agreeing to abide by the definition which secured the most votes from amongst the said societies.

Mr. Tyson thought the question whether the amateur section should stand must be governed by what definition of a novice was selected; if it was a stringent one, then the amateur section would be needed. Another thing which needed putting a stop to was the fact that a fancier could at present win in the champion classes at one society, yet could join another, and there show in the novice classes. That, he thought, was ridiculous. The trouble, of course, arose through each society being a law unto itself as regards what constituted a novice. The L.C.B.A. had made their own definition more stringent, and compelled some of their novices to move up. In consequence, things had been better all round for the society, the amateur classes at their last members' show being about the best they had ever had, while the novice section did not suffer at all, because more members were induced to bring out birds.

Mr. Crisp: That's it; if you allow men to remain in the novice ranks too long, the "raw recruits" can't get a card, and the odds are they won't remain in the Fancy long. We all want to win something, and even a card is encouraging. The amateur section is a useful intermediary, as if a fancier is a novice for one year only, he then has one or two years, or even more, as a "probationer" in that section before going up into the champions. I submit that this is a fairer way to deal with him than on the basis of three firsts at three separate shows, as in the C.B.U. open rules, for then a man might remain a novice for three years, to the detriment of the younger members of a society.

Mr. J. S. Clark exclaimed: He can go on winning seconds and thirds to all eternity! Mr. C. H. Cooper contended that it would crush the novice if he were "sent up" after winning one first, as the competition at some members' shows was so poor. For instance, a man might win first at some shows, and yet at the L.C.B.A. show the same bird probably wouldn't be good enough to secure even a card.—Mr. Crisp: I should be willing to add there must be at least three competitors.

Mr. A. C. Burn here rose, and said he would move a proposition that a meeting be called at some convenient date and place in the Metropolis, to which representatives of every metropolitan society be invited, the object being to form a Federation of London Societies. When they had accomplished this, then they should decide on the best definition of an amateur and a novice. He thought they should form one big London organisation, and hold one big show every year. So organised, they would be both strong and wealthy enough, for the Federation would have the membership and funds of every metropolitan society at the back of it. Further, they had a place wherein to hold a show which was second to none in England. He recognised that the formation of such a Federation must necessarily be a work of time, and he did not expect coming to any decision that night, for there were no representatives there empowered to voice their societies' views. He had no power himself to even voice the views of the society (the City and Suburban A.C.B.) of which he was an official.

Mr. Tyson explained that every secretary had been summoned to that meeting, which was, in fact, a meeting of London societies. But he thought it only fair to explain that the notice given had been so short that they had not had time to consult their members. He desired it to be particularly understood that this was not an L.C.B.A. meeting, for the L.C.B.A. only had one voice in the matter, and whatever definition of a novice or amateur were arrived at, the L.C.B.A. would adopt it in common with the other societies.

Mr. Crisp put in the following amendment:—"That the rules governing the amateur and novice questions in every society within the London police area be printed together and circulated to every member of the said societies, the societies to then discuss the matter, and vote for one rule out of the number, the one receiving the highest number of votes to be accepted as the definition of a novice and an amateur for all the aforesaid societies."—Mr. C. H. Cooper seconded this, and it was carried without dissent.

Before the Chairman put the above to the meeting, Mr. Burn pressed the consideration of his Federation scheme (which the Chairman thought out of order at that moment), and this led to a sparkling passage of arms—or, rather, words—between himself and Mr. J. S. Clarke. Mr. Clarke threw cold water rather copiously upon the scheme, and said London societies and fanciers would never be got to federate as long as the world kept turning round. He had "had some." Both the L.C.B.A. and himself had tried similar schemes in the past, and they had come to nought. Mr. Burn spoke through faith; he spoke through experience.

Mr. Burn retorted that he had no doubt both Mr. Clarke and the L.C.B.A. had tried big things in the past. He was not concerned with anyone's past failures: he would try to do better.

After the novice question had been disposed of, Mr. Burn again returned to the "charge." He moved that the following question be put at the foot of every paper sent out:—"Are you in favour of establishing a Federation of London Societies?"—Mr. Cooper seconded, and it was unanimously carried.—Mr. Burn said he would not complicate the issue by adding any details, but let it be fought out on the plain question.—Mr. Clarke, however, thought it would be necessary to at least state the object of such Federation, as all would be asking.—Eventually this was left in the hands of the officials afterwards appointed.—It was pointed out that the Federation would be able to see that the ruling on the novice question, and any similar rulings, were properly carried into effect; also that the proposed annual show would not in any way interfere with the present annual show of any London society.—Mr. Burn thought at least two months should be given the societies concerned to consider the schemes.

Mr. J. W. Rennie was elected to the post of Hon. Secretary, for the purpose of circularising the metropolitan societies, and testing the general feeling. Also to convene a further meeting at such a date in the future as seemed desirable. On the question of preliminary expenses and their payment, it was decided to send round the hat, with the result that 25s. 6d. was subscribed in "next to no time." Mr. R. L. Crisp was then appointed Treasurer. A hearty vote of thanks to the Chairman brought the meeting to a close.

ESTABLISHED 102 YEARS.

HINDHAUGH'S

'SPANISH' SEED.

Absolutely the finest the World produces—Boldest and Cleanest.

MONEY CAN NOT BUY FINER.

SPECIAL OFFER:—56lbs. for 12/- Carriage paid in U.K. Cloth bag included gross (excepting Ireland).

This very special offer is made to introduce this "GRANDEST OF ALL SPANISH CANARY SEED" to all bird fanciers and includes delivery to any station in England, Wales and Scotland having through communication with the North Eastern Railway from Newcastle, by goods train.

We quote as follows on rail Newcastle:—

"SAMPLE A"

Finest obtainable Re-cleaned Spanish Canary Seed, 10/- per 56 lbs., 2/9 per 14 lbs. *(Bag free.)*

Carriage if by passenger train (payable by buyer) is only:—(in England, Wales and Scotland)

Above 50 miles and not exceeding 100 miles:—7d. for 14lbs.	11d. for 28lbs.	1/9 for 56lbs.
100 " " 200 " 10d. "	1/2 "	2/4 "
Over 200 any distance .. .. 11d. "	1/6 "	2/11 "

William B. Ellis. Joseph Ellis.

MILLERS AND MANUFACTURERS,

Newcastle-on-Tyne.

BORDER COUNTIES NORWICH AND CINNAMON CLUB.

SIR,—Since last issue a friend has sent 2s. 6d. towards club funds, and another offered a handsome medal for second most points for novices. Here's a chance for novices—two medals, and only half a dozen novices so far.

A. HAY, Sec.

30, Main Road, Tweedmouth.

CLOTHES PEG AS FEEDER.

SIR,—Yesterday I was shaping a stick to feed some young Blackbirds when I noticed a new wooden clothes peg, one of the machine-made ones, made of hard wood and nicely smoothed. When I had sawn one of the legs off I found I had a very handy tool with which to feed such birds as Thrushes, Blackbirds, etc. The level and smooth surface being just the thing, and the top nice to handle. I tied a bit of string round the neck, hanging it on a tack near where wanted, so as to be always handy.

HULLITE.

THE DULWICH AND PECKHAM RAMBLE.

SIR,—In your report of the country ramble of the Dulwich and Peckham C.B.S., you mention, as one of the number, Mr. Alan Cunningham. Can any of your readers inform me whether this is the Mr. Cunningham who some few years ago lived in Frome, as I should, as an old friend, like to get his address, or, if this should meet his own eye, I should like to get a line from him.

BERT BARNES.

Sunny Side, Frome.

SKYLARK LAYS EGGS IN CAGE.

SIR,—I have had an experience which, I understand from my birdie friends, seldom happens. I reared a Skylark last season, and let it run about my bird room. Unfortunately, about three months ago, one of its legs was caught in a spring mouse trap, and I had to cut it off at the upper joint. Since then I kept it in a cage along with another Lark that I have had for about 20 months. Last Monday I found an egg in the bottom of the cage. I was naturally astonished. I took it out, but put it back on Wednesday, and it disappeared on Thursday. On Friday she was running (or hopping) about with some straw in her bill. She laid again on Friday. The egg was not two minutes laid when the other Lark promptly devoured it. This is where the first egg went to, no doubt. She fell sick Saturday morning. I tried to fix her up by putting her beside the fire, and oiled her a little, but found her dead in the morning. I opened her, and found an egg had broken inside. I thought the hopping about on the one leg must have been the cause. Perhaps it is not so uncommon for them to lay in confinement, but I thought it might interest some of the Fancy. The other is a cock, but I understand it is impossible to have fertile eggs in the cage; all the same, they can lay. My Canary breeding experience up to date is:—One nest, four clear eggs, one chick out of four eggs, three chicks out of three eggs, two Goldie Mules out of four eggs. There is something rotten in the State of Denmark.

T. P. OGILVY.

HOW I BUILT AN OUT-DOOR AVIARY.

SIR,—I see a reader asking for information with regard to an out-door bird-house. I will explain how I built one for myself, which suits its purpose well. I have built it against the end of my house, which has saved me one side (the largest). The frame work is of 2½ in. by 1½ in. quartering, which is kept together by knee irons (or angle irons) and ⅝ in. coach screws, so to enable me to take down and rebuild at any other place I may want it. Sides and ends are ½ in. boards, tongued and grooved. I have also stripped joints to prevent any draught. Roof is of ⅝ in. boards, not tongued nor grooved. On top of boards I have several layers of brown paper, put on in the following way:—First a layer of paper, then a coat of tar; another layer of paper, then tar, and so on. When dry you have a roof that will be all that is desired—warm, dry and insect-proof. The floor is boarded. I have two doors, one wooden to shut out all draught, another made similar to a cage front. Nearly all material I bought second-hand from a builder's yard, being careful not to use any that had a shake or crack in. I have a ventilator in opposite end to door, which is a dozen holes, made with a ¾-in. bit, and a slide to cover them when very cold. Fresh air is admitted through door, according to weather. If very warm, I leave door wide open; only wire door closed to prevent pussy entering, or any birds being lost if out of cage. Wooden door opens into porch, wire door opens outside. After I finished building I gave a coat of paint, then puttied up all nail holes and small cracks; then gave two more coats of paint. My cages are racked at back of birds' house against wall of dwelling house, in three tiers. If I have omitted anything reader wants to know, I shall be only too pleased to oblige. I may say my birds were in this place all last winter without heat, and without ill effects.

LINEMAN.

AN EARLY FEEDER.

SIR,—I have a young bird 24 days old, which was hand fed from the 14th day, feeding four other young ones 17 days old. I was astonished the first time I saw it. Is it not a rare occurrence?—ANDREW WILSON.

PROPOSED SOCIETY FOR BURTON.

SIR,—Referring to the letters of "Jumbo" and "Try Again," would it not be as well for all bird fanciers desirous of forming a new society to meet together to discuss the matter? Mr. Dickens' house, the New Inn, Station Street, would, I think, be very central, and if all interested in the movement will meet there at eight o'clock on Tuesday evening, June 4th, something might be settled towards its promotion. I think there are plenty of fanciers in the district who would not only support but would welcome a society devoted solely to cage birds. I trust all interested will turn up.—W. R. BELLAMY.

PARASITES ON CANARIES.

SIR,—I am pleased to see, since I gave a short paper upon the above subject before the Bolton O. and R.C.S., which you kindly published in CAGE BIRDS, Mr. St. John has given some good advice, and now my friend, Mr. Allen, is giving us some more. Well, I suppose we are like Oliver Twist—we can do with it, especially when it comes from those who are thoroughly conversant with the subject; but I think Mr. Allen has let his pen run away with him. It is only a few weeks since I told Mr. A. that his birds had lice on them, and in that short time he has found out all about them. I have studied them for as many years, and here let me tell him quassia will kill all the grey lice that are moving on a bird while he is getting his washing tackle ready. Quassia is a good tonic for birds, and can do them nothing but good if they drink it, and it will kill every insect at the same time. Then he says the lice, after his treatment, will be found dead at the ends of the feathers. I think not. These are not lice; they are more like those things fanciers have got their eyes on just now—some will hatch and some may die in the shell. Then Mr. Allen has something to say about red mite. Does Mr. A. sit up all night to watch if the red mite come to sip his Sanitas and Kill-germ vintage? If not, how does he arrive at his knowledge? They will not sally forth in the daytime.

FRED PROCTOR.

THE CRESTED CANARY CLUB AND THE C.B.U.

SIR,—I fail to see how the C.C.C will, as a body, be injuriously affected by joining the C.B.U. I understand that the object of the C.B.U. is to purify the Fancy, and one of its objects is to prevent the present practice of purchasing fabulously-priced winners with the object of creating a name on the show bench, the reward for his notoriety being the sale of exhausted old birds or inferior stock. If the C.B.U. can only achieve this one object, it will be a real boon to the "true" fancier and a terror to the "professional" fancier. I wonder how many young crest fanciers have paid £5 or £10 of their hard-earned savings thinking they would get a good pair of stock birds, with the above unfortunate results. If the seller's attention is called to the result, his excuse is that high-class Crests are difficult to rear, and the novice throws up the Fancy in disgust. How much better it would be if he had had a pair sold him that would have bred some fair birds which would have got into the cards at the smaller shows!

ANOTHER COUNTRY MEMBER.

SIR,—I do not propose to waste much more of your valuable space in dealing with "A Country Member." It would neither interest nor elevate the Fancy to enumerate my many failings—of which I am perfectly aware. I would refer him to another letter on Rule 17, which will answer much of his own. He is altogether wrong. I am trying to get the C.B.U. upon a sound and impartial basis, and will use what influence I possess in favour of the L.C.B.A. again affiliating, owing to them holding an open show. Are you really serious? Do you think two of the decisions of the C.B.U. have had a tendency to elevate the Fancy? Why, the Executive Council themselves do not consider affiliated members capable of coming to a wise decision without their instructions, and, whatever failings I possess, even "Country Member" cannot accuse me of treating the C.C.C. members with such scant respect as to try and influence their decisions. "Country Member" may be straightforward for all I know, but he is still afraid of openly exposing his identity. The office of Secretary of the C.C.C. is vacant, and the position offers excellent opportunities for one of such refined intelligence, and his influence would be all the more apparent by following one so susceptible to vulgarity.

JOHN TYSON.

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. It kills all insects, harmless to everything else.

THE REMEDIAL EFFECTS OF TAR.

SIR,—A few weeks ago one of your correspondents told of the good results he had obtained from the use of coal tar given in the drinking water to one of his Yorkshire hens suffering from asthma. As I also had a Yorkshire hen affected in the same way (she used to wheeze and sneeze and pant dreadfully), I decided to give the coal tar a trial. I took a bottle and tried to get it first of all at a wholesale druggist's, but the only thing they could give me was solution of tar, sold at 1s. per bottle. I thought perhaps that was not the right thing, so went to a chemist's shop, but they, too, only kept solution of tar, but told me they would make a small quantity. So I bought threepennyworth, and, according to your correspondent's instructions, gave my hen a few drops in the drinking water. At the end of a week I was surprised at the result—she seemed so much better, and after a fortnight had elapsed the bird was practically well. She is now mated and accepts every attention from the cock bird, so that I have great hopes for her; but a month ago, well, she looked like going over to the great unknown. I trust I have not encroached too far upon your valuable space, but thought, perhaps, others of your readers might profit by my experience. Care must be taken in using the tar, as it is a poison. Just sufficient to colour the drinking water a milky white is all that is required.

MISS BUSHNELL.

SPRING NOTES FROM RAMSEY.

SIR,—Early in March eggs of the Thrush were found in many places. The middle of March young Thrushes were found in three nests, but only three in each nest. This singular occurance I cannot account for. Why there should only be three eggs and all fertile so easily I will leave. About the middle of March I was informed from two quarters that the Cuckoo had been heard, which I did not believe. No donbt the Wood Pigeon or a mimic (boy) had been taken for this call. Several pairs of Wheatears had been seen, and were closely got at; the Chiff Chaff was also seen. At the end of March several nests of the Wren had been found, some in old cans and pots. Several Skylarks' nests with eggs in were also located, but not destroyed. The Chiff Chaff, again, was heard early in April in all directions. Several nests of the Owls were found; these birds build early. On April 10th three different reports came to hand that the Cuckoo was both seen and heard. This I doubt very much, and am sorry to doubt my informants, some of whom were naturalists. On April 18th I myself heard these well-known notes, also those of the Nightingale, which is the earliest I have as yet recorded. At the time of writing these notes no Swallows have yet appeared. Bird life is now very interesting, as most have selected partners. A large flock of Starlings was seen on March 31st. There is no doubt they had not settled down in this district, or they may have been visitors to this part. Several nests of Starlings I now know of. I had heard that the Blackcap was both seen and heard on April 18th—this may have been so, but I cannot vouch for the facts. The Goldfinches are now busily flying about in pairs; three pairs have come close to me, and I hope they may settle. No Bullfinches have yet been near here, although my birds are continually calling; but the Chaffinches are very numerous, and are continually answering my birds, also upsetting them, with their Hybrid notes. I must confess that my Chaffinches can beat the wild birds at singing, thanks to the hemp and other artificial foods and seeds which have brought them on. Whether I shall ever get them to pair and breed in confinement I have my doubts, but perseverance is the main point, with patience included. I yet hope to get this bird to cross with several of our British birds and Canaries. The Blackbirds were somewhat later than the Thrushes—in fact, nearly a month from the first Thursh's visit I had been informed of; but now they are quite plentiful. Several nests have been hand reared, for as a rule these early nests are mostly cocks. There may be, of course, exceptions to this rule, but I have not found it so after 20 years' careful study of all wild birds. The Hedge Sparrows are very numerous, but this year they have been somewhat later than usual in building. A pair of Kingfishers have been seen about the brook, but how long they will remain before some amateurish sportsmen get to work I will leave. There have been several instances where they have bred in this district near the town, but this was many years ago. I doubt very much if there are many, or any, nests in the district, without you go into the isolated fens. These birds are now very rare in this locality; in years gone by they were plentiful. I cannot think it is because they are shot, or I should have heard of them; but, anyhow, they have gone. In some places of our beautiful wild fens, where bird life and Nature in all its wild surroundings and beauty may be seen, many a valuable lesson can be learnt. Many nests of the Butcher Bird have been found in these wilds. Unfortunately, I have not been able to explore them; the reports only come to hand by my friends, who spend a few hours in these parts, or half-holidays, or when they could get away from business. These wilds are the homes of the spring migrants, and many nests of these have been found; but it is most difficult to locate them, as they are mostly preserved, not for the wild birds' sake, but for the game which is plentiful, and breeds in this wilderness. Anyone who could spend a few days at this time of year in these fens, and are lovers of Nature, would be amply rewarded, both in bird and insect life.

T. H. KINCH.

RESIGNATIONS AT BARROW.

SIR,—I was greatly surprised on finding that the President of the B. and D.C.B.A. was replying to my letter, which appeared in your previous issue. I expected this would have been the Association's business, and replied to by the Secretary. Now, he (the President) goes on to give you reasons of his own for my resignation, which are contrary to fact, and only a way of getting out of it. He puts one reason down to not liking a gentleman that was made a member. Now, I called on this gentleman myself, as I do all my business straightforward. He said he had nothing against me, and I told him I had nothing against him. When he was made a member I wanted him in the room to ask him a certain question. Not being granted his admission to the room, I told the members I would not vote one way nor the other, as I wasn't going to be guided by anyone. Now, I have some good friends who are members yet. With regard to the acceptance of my resignation, I have learned something about the "Unanimous Vote" that was taken. This is a fact, and will be on the minute book, viz.:—There was a proposition that it be accepted, and an amendment that I be called upon to give my full reasons for same. The vote was taken, and was a tie. Some wanted the Chairman to give his casting vote, but someone would not have it (one of my friends, I expect). So the vote was put again, and the proposition "carried unanimously" by one vote! This isn't how Mr. W. gives it to the Fancy. Regarding the Nest Feather Show judge, Mr. W. does not contradict my statement that five or six were subscribing to the judge's fee. It was done outside by some until I resigned. My motto is, "Do unto others as you would like to be done to."—E. E. MILLER.

WILD BIRD OBSERVATIONS.

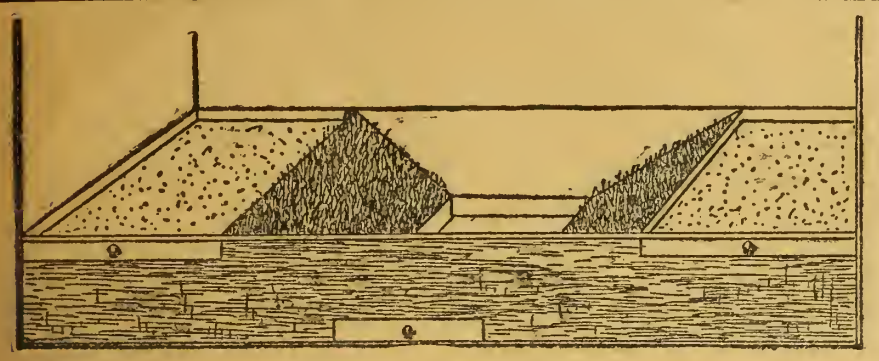
SIR,—During a recent trip in Essex I observed by sight or hearing, or both, the following birds in order as given:—Rook, Blackbird, Mistle Thrush, Willow Wren, Starling, Robin, Water Hen, Pheasant, Sparrow, Blue Tit, Thrush, Greenfinch, Swift, Lark, Whitethroat (one and nest), Swallow, Hedge Sparrow, Martin, Chaffinch, Wood Pigeon, Sand Martin, Heron, Reed Bunting (a pair and one), Linnet, Magpie, Wren, Cole Tit, Cuckoo, Chiff Chaff, Corn Bunting, Partridge; 31 different British birds. And later, during a trip to Scotland (southern portion) and North of England, all inland, I observed by sight or hearing, or both, the following birds in order as given:—Rook, Jackdaw, Starling, Lapwing, Wood Pigeon, Blackbird, Martin, Mistle Thrush, Chaffinch, Pheasant, Swift, Sparrow, Cuckoo (both heard and seen), Willow Wren, Hedge Sparrow, Robin, Thrush, Blue Tit, Black-headed Gull, Cole Tit, Sand Piper (three, on the Clyde), Sand Martin, Lesser Black-backed Gull, Wren, Greenfinch, Reed Bunting (one only). Sedge Warbler (one only), Dipper, Partridge, Herring Gull, Redshank (one pair), Curlew (four), Coot, Water Hen, Wild Duck, Garden Warbler, Yellow Bunting (two); 37 different British birds. The Carrion Crow was probably seen also.

I was rather surprised to find so many Gulls inland at this season of the year, and apparently away from breeding haunts. I was also surprised at not seeing the Pied Wagtail, Grey Wagtail and others; also at not seeing the Yellow Bunting till so late; also at the scarcity of Linnets. We hear a good deal of rare birds, and of the rarest British birds, and so on; but it would be interesting to pick out the most numerous British birds, or the six most numerous. I should feel inclined to pick out the Rook as most numerous, and after the Rook the Starling.

VIATOR.

THE SCOTCH FANCY MODEL.

SIR,—I go further than "Piebald," and say this photo of which "Fancier" writes about was not even selected according to the arranged procedure of the Glasgow Scotch Fancy National Derby Ornithological Society. First, at the May meeting of the Sub-Committee, only four were present: Messrs. W. Hart, T. Smith, R. Wright, and myself. The matter was left over to be selected at another Sub-Committee meeting in June; that meeting was not held. A half-yearly meeting was held in June, and the matter was brought up. I was not present at the time. Mr. Wright's photo was selected by consent. I was given to understand no vote was taken. But "Piebald," I am not going to accept a composite photo of three champions in one as a model. First, it was a short bird, the original photo of Mr. Lawson's old champion buff, spoilt by having back added to it, which made it appear short and out of position. Since then many lessons appear to have been learned. It was lengthened, and each photo I have seen appears to me different, a little being added to some part. The last I saw was drive had been lengthened, as "Belgian" says, "you can see the joints." Puzzle:—What was the original one submitted to June meeting? The only model that could be adopted is through a representative body from all districts of Scotch Fancy breeders. One could only be amused at "Fancier." He says all opposition to this photo has gone out of the Fancy. I for one have not, and am pleased to say that I have now a nest of Fancies a fortnight old, looking grand, and I hope to come up smiling again this year. If there had been anything like a fair "crack of the whip," I should have held my peace; but under the circumstances must ever oppose this photo wherever it appears. Allow me, as an old official of the L. and P.O.S., and one keenly interested in this variety, to thank you for your generosity in the interest of Scotch Fancy classes at the last Palace Show.—J. HARRISON.



Interior of Novel Lark, etc., Cage.

A NOVEL WAGTAIL, LARK OR PIPIT CAGE.

SIR,—The enclosed sketch shows the bottom part of a cage which I think would answer very well to keep a Wagtail, Lark, Pipit or similar bird in. A glance at the drawing will at once explain the idea, and, of course, it can be worked out to any size the fancier chooses. Three trays are run in from the front. The bottom one, in the centre, is to hold water for the bird to paddle in, so should be made of tin, or, better still, thin galvanised sheet iron, which will not rust, and may be had cheaply from any ironmonger. Sloping upwards from this are two shallow boxes (tin-lined, if preferred) to hold clover turfs. Then at the top, each side, come drawers to hold sand, or sand and road dust mixed, for the birds to take a sand-bath in. This cage, I think, meets all the requirements of the species I have mentioned. The measurements of my own cage are:—Length, 36 in.; height, 18 in.; and width, 11 in. I have doors cut in each end, about 4 in. wide, and a door about 6 in. wide in the wire front. The wood piece at front is 6 in. high. The sand-trays are each 8 in. wide, while the water-tank is 4 in. wide and 1½ in. deep, the rest of the length being taken up by the turf banks. I consider this pattern might be used for either show or stock purposes.

W. C. H. WYTHE.

Forest Gate.

THE CAGE BIRD UNION.

SIR,—The enclosed document has reached me. As the subjects seem very interesting to the Cage Bird Fancy at the present moment, I hope you will see your way to find room for it.

OBSERVER.

GRAND FIELD DAY OF THE IRRECONCILABLES.

MAY MEETING.

Enter—PRISKO, SONTY, TURKIE and REV. SNORE (*of mature experience*).

PRISKO: I am sorry we have to meet at a public house.

SONTY: Well, let that pass.

PRISKO: Now, you two, Sonty and Turkie, take your time from me. Sonty was out of his reckoning entirely when he went to Manchester. We never imagined the Lops would fall in. However, they did, and since then we mean war.

LITTLE TURKIE: I think we have no chance. The C.B.U. is too many for us all over the country. The fact is the C.B.U. is wanted, and you, Prisko, may hold your Utopian ideas about "no coercion" and the "intelligence of Englishmen," and so on; but what about the Northampton and Preston experts?

SONTY: Of course, the Elcebee had a perfect right to accept the Northampton expert's entries after he was dished by the Lops, seeing the first article in our creed is to "go agin them."

REV. SNORE: I differ, and I must tell you, Sonty, that some of your actions and letters are far from my liking. Besides, why don't you write anonymously? You have spoilt your reputation sadly by signing your letters. Take the Nottingham case, for instance. A lot of people think you cantankerous, and think you would fight with your own shadow; but, of course, I am a friend of yours. Also, you generally have a whine; but, I repeat, I am a candid friend of yours.

SONTY: Anyhow, don't call me Uriah Heap.

TURKIE: I am not quite sure, Sonty, that your argument about each member of each society having a vote is right. I think you should have looked further ahead.

SONTY: I differ from you. What I write I am not ashamed of. I am a very superior person, and withal so "'umble." No one can "hold a candle to me," as the song goes.

PRISKO: I do a good deal of bullet moulding, but I don't endorse everything our friend puts in the papers.

REV. SNORE: I think our friend Sonty's argument won't hold water at all. Why does he not begin by reforming Parliamentary voting? Besides, why stop at one man one vote? It is well known that many a fancier depends on his suffragette, and I could soon take you to places where the grey mare is the better horse. Why, therefore, should not Mrs. Sonty have a vote? But why stop there? Why not include the little Sontys, and also your sisters, and your cousins, and your aunts, whether members or not? No, your letter is nonsense, and the Secretary of the C.B.U. is quite in order in his way of taking the vote. Take my advice, and be more careful, or you will soon reduce yourself to the level of the Hampshire Lark. You are perilously near that level now.

PRISKO: Coercion is hateful to me. I object to bit and bridle. I must be allowed to prance to my delight. I like to be a law unto myself, and to indulge my own sweet will.

REV. SNORE: Prisko, my man, not so fast. You occupy a fairly exalted and quite honourable niche in the temple of the Fancy, I allow; but be careful of over-vaulting ambition. You remember the tale of the old parson and the young one. The old parson said to the young one, "What denomination do you belong to?" "The Independents," smartly replied the young man. "Ah," said the old man "the angels in Heaven are not independent." No, Prisko, you take your place quietly in the C.B.U. team, and you will do yourself more good by doing your bit of the joint work than by all your prancing and kicking.

PRISKO: I shall consider your valued counsel. Well now, my beauties, what about the amateur and novice?

REV. SNORE: Old Trippy was, I think, one of the fathers of the amateur, who flourished under the fostering care of his parents for a time, but who is now practically dead. He has been buried by the National Show. He hardly existed in the country at all. He is a sickly Cockney, and scarcely ever got beyond London town. The only good he ever did in this world was to bring a few coppers to the coffers of show secretaries. The sooner he is consigned to oblivion the better, and let us stand on rule 4 for the novice. Prisko, yon admire an Englishman. Why not let the novice prove himself an Englishman, and step up among the champions, instead of degenerating into a pot-hunter? There is a hole in the ballad somewhere. Sonty here has called a meeting, but whether it is a meeting of the Elcebees only, or of all London societies, I hardly know. Also, the meeting is only called in connection with the novice, so that, according to my strict views (where other people are concerned), the amateur cannot be discussed at it, no more can any other subject; only the novice and his definition. Your letter, Sonty, is also not clear on other points.

TURKIE: Another mistake, I think, Sonty. I hate dastardly circulars. They make my blood boil.

PRISKO and SONTY (in one breath): And mine.

REV. SNORE: Keep your hair on, all of you. The C.B.U. circular was quite a proper one, and what more natural or correct for the Secretary of the C.B.U. than to explain the position fully to his members? Can you dispute the facts? No; you are all evidently chagrined to find that so many important societies or unions outside our Fancy have found it necessary to adopt such a rule as C.B.U. No. 17. And, indeed, societies that have not adopted such a rule deplore their want of it, all going to prove that the C.B.U. are going on the right lines in maintaining the rule, and that you are the narrow-minded and cramped party who are out of touch with the Fancy, and that you are not wanted.

SONTY: I want to say a word about the C.C.C. and the C.B.U. No one can rate the members of the C.C.C. better than I can, when they don't respond fully to my appeals for cash, etc., although (considering there are generally two quite distinct classes in every local and specialist society—those who give and those who get), I must allow I don't see what benefits those who give obtain; but, of course, inconsistency is what I delight in, and I am quite right in taking the other side, when it comes to be a question of the C.C.C. contributing to the funds of the C.B.U., and in taking the miserable stand that there is "nothing to be gained."

REV. SNORE: Sonty, my friend, suppose no fancier ever put a bird in a show unless he were sure "there was something to be gained," and suppose no fancier ever contributed towards a special or other fund unless he was sure "there was something to be gained," where would the Fancy be to-day? Again, Sonty, my friend, how would it be if you and your compatriots drove the C.B.U. into a little more coercion, and if they made a rule that no specialist society could hold a show in connection with, or offer specials at, any affiliated show, unless that specialist society was itself affiliated? It would be easy to prove that such a specialist show or specialist prizes are not a members' show or members' (special) prizes in the ordinary acceptation of the term. Again, Sonty, why did you reply to "Country Member," whose letter was not replied to sooner because it was unanswerable? Your weak wit at the commencement of your letter only shows that your mental calibre is vastly inferior to his. You should not judge "Country Member's" letter by your own, which is certainly not worth replying to.

A DEFORMED BORDER.

SIR,—I have a little novelty which may be of some interest to readers of CAGE BIRDS. It is the first I have seen. It is a Yellow Border, a month old on Saturday, and doing for himself. He has only one wing; the left is missing. There is no sign of any butt or anything else, and a little beauty he is. D. JENKINS.

"NEAR TO NATURE'S HEART."

The members of the Hartlepools C.B.S., accompanied by a few friends, spent an almost ideal day's outing on Whit Monday. Leaving West Hartlepool at 12 noon, the party arrived at Wynyard Park at 2.15, and there met the steward, D. W. Meiklejohn, Esq., through whose kindness the society had been granted the privilege of rambling through the most beautiful woods surrounding Wynyard Castle. After the formation of groups, we were taken charge of by the keepers and conducted through the woods in a most intelligent and praiseworthy manner, all of them showing great interest in bird life, and were delighted to point out to us all the items of interest they had noted during the past week, after being apprised of our visit. Four hours were spent in an absolute Garden of Eden, and at several periods during the ramble the sound of a human voice after a lull in the conversation seemed almost a sacrilege, so perfect were the surroundings. All were loth to depart from it, but the good things provided by Host Balmer had to be despatched, and the lightning rapidity with which the viands disappeared was something to be wondered at. After the tables had been cleared, a spokesman for each group related their experiences, and many a hearty laugh rang out at the graphic descriptions given. Without finding anything rare, several interesting items were related. The Blue Tit was observed sitting on a clutch of eggs, the nest being built in a hole in a tree. One member of the party gently approached, and, in order to get a peep of the eggs, inserted his finger and actually touched the hen, when she receded; and on looking again she could not be seen. A piece of stick was then inserted, but her castle proved a veritable stronghold, and she could not be dislodged. In passing through a lonely glade the keeper advised caution, and the party soon came into full view of "the haunt of the Kingfisher." Perched on the stump of an old tree projecting from the water was the beautifully-plumaged Kingfisher; but only those caught a glimpse of him who were in the forefront, as, becoming aware of the intrusion, he spread his wings, causing a momentary flash of brilliant colours, and was then lost to view. Two or three instances of the Field-fare nesting were recorded, also the Bullfinch, Sandpiper, Chaffinch, Robin, Wren, Whitethroat, Blackbird, Thrush, Partridge, etc. A most interesting experience was given by one of the party, which came under his notice a short time ago. Along with some friends they were having a few days' shooting, and ferrets were engaged in driving rabbits from their burrows. One of the ferrests failed to return, and after a considerable time had elapsed it was decided to dig it out. Implements were procured, and both rabbit and ferret were dislodged. It was noticed, however, that the end of the burrow had not been reached, and more sand was dug out; and the surprise of the party can be imagined when a Cushat, or Wood Pigeon, emerged from the aperture. It was found to have deposited two eggs, and on these being examined they were found to be in an advanced state of incubation. I should imagine that a spell of warm weather had brought the hen into breeding condition, and when the cold east winds again became prevalent, instinct prompted her to select a warmer situation, in order that her brood might be reared in safety. During the evening a number of songs were rendered by Messrs. Meynell, Williams, Eyres, Robinson, Guthrie and Woodhead, and a most enjoyable, healthy and instructive day was brought to a close by the chairman (Mr. Mustard) proposing a vote of thanks to all who had conduced to their enjoyment. This was seconded by Mr. Slater, and carried unanimously. E. WOODHEAD, Hon. Sec.

REVIEWS OF SCHEDULES.

Great Horton First Feather Show.—June 8th, 11 classes. Yorks, 8; British, 1; Selling, 2. Prizes, 8s., 4s., 2s., 1s.; entry fee, 1s. There is a good list of specials. Judge, Mr. T. Bennett. Entries close June 4th to Mr. S. Dean, 24, Crossley Street, Gt. Horton.

Folkestone.—July 3rd and 4th. Judge, Mr. G. H. Billett; 18 classes:—Norwich, 3; Yorks., 3; Crests, 2; Cins., Lizards, Borders, Foreign, 1 each; British, 6. Prizes 10s., 5s., 2s. 6d. Entry fee, 1s. 9d. Under patronage of Kent County C.B.A., and managed by Folkestone F.S. Entries close June 18th to Mr. J. W. Gambrill, 56, Cheriton Road, Folkestone.

CANARY BREEDING.

By W. PAGE.

The Second Prize Essay in the recent Competition promoted by the City and Suburban Association of Canary Breeders.

Only being a breeder of Canaries for a few years, I hardly feel capable of writing on the above subject, but will quote my experiences, and the routine I have followed, which up to the present has been very satisfactory with all Canaries I have bred or bought.

With breeding, the first item to study is suitable accommodation and cages for the variety one intends to venture in. My preference being for the Yorkshire, this is the variety I will write upon. I never keep more birds than I can comfortably house and keep clean, as all must own cleanliness is a virtue in keeping all birds, especially so in breeding stock, and nothing is better than having a few spare cages unoccupied, both breeders and stock.

STYLE OF BREEDING CAGE.

The breeder I have found most convenient and suitable for the variety I write on is as follows:—Box pattern measuring 24 in. by 19 in. by 11 in. This makes a roomy Yorkshire breeder, taking a 15 in. front with four cross bars, with spring door to permit of easy access to nest pan, and also two sliding doors, one at each end. The two centre bars cut away to permit of wire slide being used for the purpose of pairing up, of which I will write later, also wooden slide, to insert which makes two stock cages of each breeder, and with a hole cut in slide they can be converted into training cages. Each cage is fitted with two seed hoppers, tin, glass fronted for preference, two glass hat drinkers, and two china egg drawers, the registered ones with slot for sliding door to fix in, and nest material rack, hook for nest pan at the right hand end and earthenware nest pan, lined complete. This is what I consider an ideal breeder. I would mention I prefer them without sand trays, but with deep turn-rail, using sawdust on bottom with tin of grit in cage. I hang up a piece of cuttlefish bone, and all is ready for the birds.

A QUESTION OF L. S. D.

Regarding the selection of stock birds, I advise fanciers to get the best they can afford, as all know in purchasing stock it is practically a case of £ s. d. One cannot expect good stock at low price. My advice is, pay a fair price and see you get value. If unable to decide for yourself, get a fancier with more experience to see them before you approve of same. Also get one to run over your stock after you have paired them off. He will then tell you if they could be improved on or otherwise, and, best of all, when the pair show comes on for the society, or societies, you belong to, put them on the show bench and compare them with others, and fanciers at shows will only be too pleased to point out the faults of each pair. Any of our qualified judges will give their opinion on them when at the shows if desired, and the reason they are cardless, should they stand so. They will also explain where the winners excell to your own mating. This gives you the chance of looking over your stock and pairing them up to compensate for the deficiencies pointed out by fanciers or judge yon have asked for advice. Shonld they stand in the cards (which they ought to if a fair price is paid), then one gets the reporters' opinion, and also the weak points of each pair.

THE PAIRING TIME.

Having got the cages and birds to one's satisfaction, or as near as the pockets will allow, as we find a fancier is never satisfied, for if he has good birds his ambition is to try and improve them. In mating the birds you have paired, nothing beats having a wire division to one's breeders and placing cock one side and hen the other. I have found I have far better results keeping them separated until the hen is well forward in condition and the cock singing to her through the wire slide. Then you can rely upon them starting in earnest, almost as soon as the slide is withdrawn. I have found cocks more vigorous if treated in this way, it saves all fighting and delay, and I consider it greatly helps in having less clear eggs.

HOW TO FEED.

As regards feeding, every fancier has his or her own particular way, and my advice is if successful with their method of feeding keep on with it. I have always found the following suit my birds, and have had good results:—Best Spanish canary all the winter, with sweet apple and boiled rape once a week; the following mixture twice a week: Two parts rape (German summer), ½ part crushed hemp, ¼ part maw, ½ part medium oatmeal, ½ part niger, and have always found them thrive on same in cold room. When pairing I allow one teaspoon of egg food to each pair daily, giving the cock the largest portion (as the hen gets it usually in the end), with young, tender dandelion leaves, until hen has finished laying her first clutch. I then give watercress for green food during remainder of season. Should I have any very backward and need more nourishment, I give a mealworm every other day until in condition for pairing, but on above diet very seldom have to use them, as I may say my birds were ready in February, on the plain seed and mixture as above. I give nesting material in rack, take away eggs as laid, putting them back at 6 p.m. on the day when I have three eggs, if it is a hen I don't know, but some of my hens lay five, and in that case I wait for the fourth egg before returning them, so that all have an equal chance on hatching.

A KNOTTY QUESTION.

Should all be smooth sailing, I leave cock with hen, but if otherwise, behind the wire slide he goes, and even then some of them call the hen off too much to feed her. If so, then in goes the wooden slide, replacing wire one when young have hatched; leave him behind for about three days, and I have always found him take up parental duties at once. I give plain canary seed whilst the hen is sitting, giving a little egg food the day before the eggs are due to hatch, and egg food (yolk only) when hatched for the first three days, hemp crushed *ad lib.* until reared. I give the egg food fresh three times a day, cress twice, and go into the room last thing at night and fill up egg and hemp drawer for first thing in the morning. When young can pick up I put them in a large cage, 36 in. by 16 in. by 11 in., until on hard seed; then place them in large flight, 8 ft. by 3½ ft. by 2 ft.

WEANING TIME.

When I take young away from the parents I give midday, instead of egg food, milk sop, and twice a week boiled rape, and have always found them do well on it. When young are on hard seed I give a little egg food one day, milk sop the next, and keep them on same until I start colour feeding.

I think I have given a fair detail of my method of breeding, etc., and would say I powder all nest pans and change same at 14 days. I would mention that on the above method I have my first round from seven hens, 13 out of 22, on the sticks, and the other nine in the nest doing well.

Fanciers are all talking about the Substitute for Egg and Bread Crumbs.

SPRATT'S

COD LIVER OIL

CAGE BIRD FOOD

REARS FROM THE NEST.

GIVES STAMINA.

SAVES TROUBLE AND EXPENSE.

Sold by all dealers, in **3d.** and **6d.** tins; post paid **6d.** and **9d.**; 7 lb. bag, **2/6**, or post paid, **3/2.**

THE COMING OF THE MIGRANTS.

THE LAUGH OF THE WRYNECK.

The musical laugh of the Wryneck ripples from the orchard. A single tree in a notch of the downs by the sea caught five of them one Sunday morning lately. We shall not see five grown Wrynecks in one tree again till another year has gone by, but there will be as many young ones in a hole in the apple tree, whence our returned "Cuckoo's mate" will ruthlessly drag out the nest of a Blue Tit to make room for them. A score of Yellow Wagtails are running about among the cattle in the home close, snipping up the first British insects they have tasted for many long months. There is a flash of feathered lightning among the pear blossoms of the walled garden to tell us that the gorgeous Redstart is again at work at his fly-catching. How glorious to view again his tropical colouring—his black casque with snow-white crest, the slate blue of his back shading into pure grey at the sides, his flaming tail constantly in motion. The hand of the south wind has flung us back our birds, scattering them justly into every nook that knew them last summer. Wheatears are wafted across intervening lowlands to the uplands they belong to; Landrails are blown over mountain passes to the fat valleys they love; scarcely a Nightingale flutters beyond the line of the Severn; a large area in the southern home counties is without Redstarts; pied Fly-catchers go only to the Cumberland Lakes; and many other partialities are observed. These are facts to make us believe that not only does the English-bred bird come home to England, but that in practically every case each individual regains the very copse where he was hatched, or where she built last year. Where an old bird has died in the interim, one of its family takes the old nesting site; where the parents survive, the young ones nest as near to the family seat as may be.

THE RANGE OF THE BIRDS.

The summer range of these far-travelled little birds is remarkably small. We frequently find that a single tree forms the whole summer world. Thus in the middle of a long mountain pass a single adventurous Rowan has established itself, and all day long on any summer day its own pair of Willow Wrens can be seen flicking in and out its graceful foliage in the eternal quest for insects to feed the little family in the heather below. A mile further on, another Rowan has also its own pair of this or some other species. Each hedge that was the shambles of a Butcher-bird last year, will have its red-backed tyrant again; from each tree-top that had its Tree Pipit, the bird will spring into the air and float back on wide wings, singing its falling song. It is a trite saying that the problem of how birds return is still unsolved. We cannot even agree that there is a seasonal wind that aids them in the first requisite of a roughly cardinal direction. The most nearly favourable wind, blindly followed, would be apt to take our Blackcaps to the middle of the Atlantic, instead of among the groves of Ireland, or to leave the whole of England unsupplied with Nightingales. With the utmost willingness of Æolus to help, a sense of direction is required. There is probably an inherited knowledge of the main route to guide the flock, especially in autumn, when the journey is away from home, and the faculty of always knowing the direction of home to aid the individual.

MAN IN THE DARK.

Man with his compasses, his logarithms, his observations of the stars and other signs, his deductive reason, and his mechanical reference to the stored-up wisdom of a thousand generations has scarcely a glimmering of the faculty we call instinct in lower creatures, or intuition in our talk of future human acquirements. Knowing nothing of the homing faculty, we are eager to deny its existence, in spite of almost overwhelming evidence. We grant the Homing Pigeon enormous powers of oversight, in order to deny it a psychological excellence that we do not possess. Our summer migrants confound even this far-fetched explanation by sometimes crossing five hundred miles of sea, and by usually choosing the night for their migrations.

It is the old story of the single accomplishment proving better than a whole bag of tricks. The skilled navigator in possession of all the resources of science, goes miles out of his way in order to cast his ship on the rocks, while the tiny Gold-crested Wren crosses seas and continents straight to the tree where its nest was slung twelve months ago. The feat is a triumph of the single aim. The whole being of the bird is concentrated on this purpose, which reason would tell it at once was impossible. It is suddenly endowed with a faith that removes mountains, and makes seas as though they were not.

IS IT HYPNOTISM?

Anyone who knew the physical constitution of the bird and no more, would say that for nine out of ten of them an interrupted journey of a hundred miles was impossible. The feat of migration is so stupendous that we try to believe that the rarity of the air in the higher regions gives the birds an advantage; some daring spirits go so far as to say that they do but go aloft and wait till the world has brought the end of the journey beneath them. These have left out of account the known force (in higher natures) of the obsession of an idea. The hypnotised person is capable of exertion a hundred and a thousand times beyond the ordinary strength of his muscle. The bird on migration is in the hands of a cosmic power of which we have the dimmest perception.

HINTS ON HYBRID BREEDING.

By St. Bride.

I have had numerous inquiries as to how to treat British birds paired for Hybridising, and in order to give the greatest number the benefit of experience gained practically, I shall endeavour to give a short account of the troubles and successes which accompany this most interesting branch of the Fancy. I had been a Canary fancier for over twenty years, and was tempted by a friend to try a male Greenfinch and a female Bullfinch. The latter I had wintered and had intended to breed her with a Goldfinch, but in the month of May he softened down and the Greenfinch took his place. This bird was quiet and undemonstrative, and my comrades predicted that it was a waste of seed and water, and that I would never get a feather. Having a good stock of determination, I persevered, and between the middle of June, and about the same time in August, I was rewarded with six Hybrids, three of each sex.

Early in June the Bullie hen rushed about the cage carrying fine grass, of which there was a plentiful supply, the bottom of the cage being covered to avoid breakage of the eggs. She was erratic in laying, at one time in the cup, and at another time from the perch; the bulk of the eggs were saved, and be it to the credit of the pair, they did not touch an egg exposed on the grass. Though one pair might act thus, the next might destroy them; indeed, I heard of a case where the Bullfinch hen devoured the egg the moment it was dropped. Needless to say, none of her eggs were tested. The hen I commenced with never attempted to hatch, but rushed clutch after clutch, until she had about fifty eggs. The pair did remarkably well; a fair percentage of the eggs were fertile, but were not all hatched. Some went back in the shell. Six, however, were reared, as I have already indicated, and proved a very interesting group.

The young are easily reared, they are strong and pushful in early life, and almost compel the foster parents to feed; they grow quickly, and can do for themselves earlier than Canaries. They also pass through the moult quickly. A July bird, if in good health, will moult and be ready for exhibition in October, quite a contrast to the tardy moult of a late-bred Canary. It is essential to colour-feed them, and this has to be started shortly before breaking into the moult, and ought to be continued till thoroughly through.

Hybrids are predisposed to jump on the wires, and break their feathers, which is against successful exhibiting. To guard against this they should be moulted and kept in a goodly-sized box cage, only wired in the front. I advocate these perches and no projection inside to injure the feathers. I have since tried a bigger stock with the Greenfinch and Bullfinch, Canary and Bullfinch, Goldfinch and Bullfinch, Redpoll and Bullfinch, and Goldfinch and Redpoll, and while I had high hopes of all of these, success was confined to the Greenfinch and Bullfinch, and Goldfinch and Bullfinch.

I have bred and been successful with various kinds of cage birds, but none ever yielded the pleasure and the profit of the Hybrids. The initial outlay is small. A really nice Hybrid, with grand carriage and with beautiful feathers, will ever bring a good price. The breeder who is successful in hatching and rearing a male Redpoll-Bullfinch this season will be well rewarded financially. So far as the writer knows there is not a single specimen of that cross in existence. In Scotland every Bullfinch hen which could be got is caged up. The demand this spring far exceeded the supply. Siberian Bullfinches were at a premium, but notwithstanding this, I have come across a number of very fine hens.

My advice to everyone who thinks of trying Hybrids is to have a large stock of feeding pairs, to test eggs, and where fertile to hatch and rear.

It has been proved during the past two years that the Canary and Bullfinch cross is not impossible. In 1906 they were well known on the show bench, having appeared at nearly all the leading shows. Your paper has helped Hybrid breeders and encouraged many to enter upon this hobby.

HAVE YOU SEEN "THE STOCK BOOK"? It will surprise and please you.

ILLUSTRATED IDEAS

Under this heading we shall illustrate weekly some idea useful to the bird-keeper. Readers are invited to send us particulars of any novel and practical appliance of use in our hobby, either in cage, bird-room or aviary, with a rough sketch of same where possible. Every "Illustrated Idea" used in this column will entitle the sender thereof to a postal order for two shillings and sixpence.

CORRECTION IN No. 103.

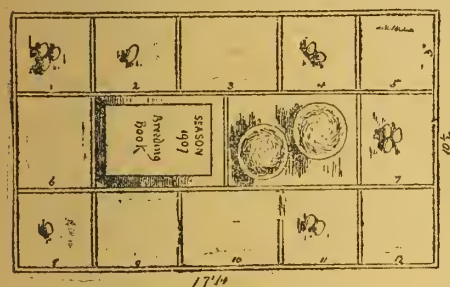
There is a slight error in the letterpress of the description of the cage. It is printed ¼-in. boards, whereas it should have been ⅜-in. boards.—GEORGE PEACOCK.

No. 105.

USEFUL BOX FOR STORING EGGS, etc., IN.

Sent by G. E. Douglas, 29, Brunton Street, Percy Main, Newcastle-on-Tyne.

I took a fancy to try my luck at breeding Canaries last year. I purchased a pair Norwich, from which I bred nine young, all strong, healthy birds, thanks to information received through your paper. This year I have six pairs up, also Linnet and Canary and Goldfinch and Canary. I am enclosing you a sketch of a very useful egg case which I have made for my use and find very convenient.



A Useful Egg, &c., Box.

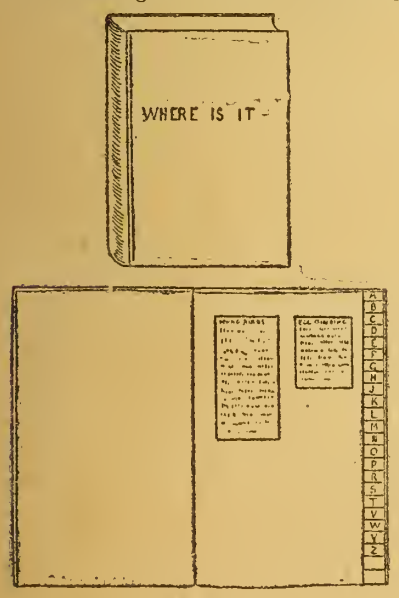
Where a number of birds are kept, the cages are numbered to correspond with the compartments, and sawdust is used in bottom for the eggs to lay on. It might be of use to other novice fanciers like myself, and is very easily made, and at little cost. It is made out of ⅜ in. thick wood, and my own case is 17¼ in. long, 10½ in. wide, and 2 in. high, with lid on hinges. Each compartment is about 3 in. square, except, of course, the centre ones.—GEORGE E. DOUGLAS.

No. 106.

WHERE IS IT?

Sent by R. Farmer, 11, South Elgin Street, Edinburgh.

A book of handy reference is very useful in any bird-room, for time is money both to the fancier and the business man. Purchase a scrap album, or a book similar to a postcard album, cut a piece of cardboard the size of the pages and about 2 in. broad, divide it with equal spaces (say 24) from top to bottom with a lead pencil, to make a guide for an index. Place this at the end of the book, keeping it out from the edge of the leaves about 1 in.



A Fancier's Scrap Book.

Take the leaves and cut about ¼ in. in with a pair of scissors, allowing as many leaves to each letter as you go down as you think necessary, till you reach the end of the book. Then insert a tin, by fanning the index, keeping each of the top division under the tin, the bottom division above the tin. Take a steel rule and place it on the top of bottom divisions (a little slant towards the bottom) cutting these bottom divisions away with a sharp knife to make a complete index. Then letter from your top divisions A, B, C, and so on, leaving out X, Z, and any other letters you may desire. The various little notes you may stick inside the book by leaving a small margin and tipping the same with gum. A double index can be made, only the second index might be divided, say, into 16 spaces for the various breeds or species, Borders, British, Cinnamons, Crests, etc., and be lettered lengthways from bottom to the top of each cut. Fanciers unable to carry out this idea can make paper tags, folding them through the middle, and slightly gumming each side of the edge of the front of the pages, to allow the tags to adhere to them. All the fancier has to do is to look at his index, and then turn up the subject. Letter a label, "Where is it?" or "Here it is," and place same on the front of book. If you have no specimen copies of CAGE BIRDS beside you, and have taken out most of the items which interest you and put them in your book, hand over the remainder to any novice bird lovers, or bird-keepers, or others you may know. They will probably in due course take a wider interest in the Fancy.—R. FARMER.

THE YOUNG NATURALIST.

Prizes of 1s. and two of 6d. each will be given for respectively the best and two second best cuttings or original bits about birds. Competitors must be children under sixteen years of age. All efforts must be briefly and clearly written, and ON ONE SIDE OF THE PAPER ONLY.

Two stars indicate the Winning Contribution; one Star the runners up.

** Maternal Tenderness of a Bird.

A Sparrow, which had built her nest on the thatched roof of a house, was observed to continue her regular visits long after the time when the young birds had taken their flight. This unusual circumstance continued throughout the year, and in the winter a gentleman who had all along observed her, determined on investigating its cause. He, therefore, mounted a ladder, and found one of the young birds detained a prisoner, by means of the string of worsted which formed part of the nest having become accidentally twisted round its leg. Being thus incapacitated from procuring its own subsistence, it had been fed and sustained by the continued exertions of its mother.—From E. LYDYARD (age 11 years), 60, St. Nicholas Road, St. Paul's, Bristol.

* The Twite.

The Twite is a pretty, plain, brown bird, with speckled throat, and short, delicate, orange-coloured beak—a sort of half way stage between the Redpoll and the Brown Linnet. It is a north-country bird, and appears in England in the winter months, when it associates on the hills and moorlands with its cousins and with the Bramblings, to which it has many resemblances, and is considered to be closely related, but is never very numerous. It soon settles down and becomes friendly and familiar in captivity. Its food varies with the seasons, a little insect diet in the spring being acceptable.—ALBERT HEMSLEY (age 14), 8, Beeston Road, Old Lenton, Nottingham.

* A Friendly Robin.

Two years ago a little Robin, finding the dining-room window open in a country vicarage in Cheshire, hoped in to see what the world was like indoors, and since then he has come in regularly every day, especially at tea time. If the weather is cold, and the window remains shut, he sits outside and looks at the family most reproachfully. One day he was found sitting on the table eating the bread and butter, and his greatest delight is to hop round the room picking up crumbs. When he hears the window opened he will fly from the other end of the garden and come in. Visitors are much surprised to see the little bird come in confidently, however many persons are in the room. Occasionally another Robin has stood on the window-sill, as if wishing to come in; but the first Robin regards him as an intruder, and drives him angrily away.—Sent by T. L. JONES, 31, Princess Street, Chester.

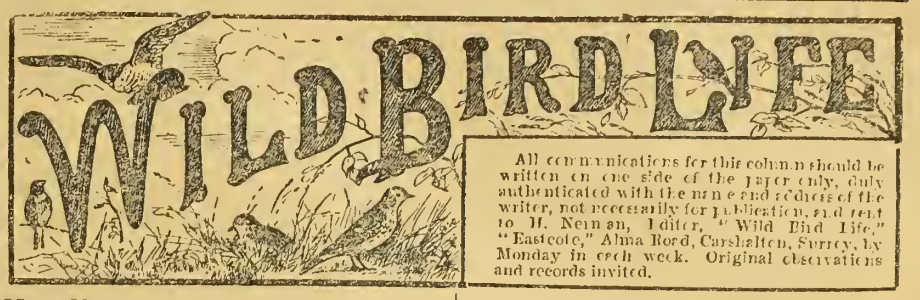
The Robin.

The Robin stays in the country all summer, and is extremely shy; but in winter Robin will fly in at the open window in search of food. I have seen Robins flutter up three pairs of stairs in search of food, and hop into stables. The Robin has a bright-red patch on its breast, and from that it gets its name—"Robin Redbreast." It measures from 4 to 5½ ins (the tail 2¼ ins.). It builds its nest on the ground, and lays from five to seven eggs. Robins are to be found all over Europe, except in the extreme north.—Sent by ANDREW WALDIE (age 13), 8, Rosevale Street, Hawick, N.B.

The Sparrow Hawk and the Birdcatcher.

There is an old bird-catcher living here, who spends a great deal of his time in catching, especially Linnets, which he moults out for exhibition. One day he took his call bird and all his necessities for a day's catching, no doubt thinking he would have a good batch of birds to take home. After liming the twigs and placing his sweet-singing Linnet-Mule in a suitable bush, he sought refuge for the purpose of watching the birds alighting on his twigs. A Sparrow Hawk, flying overhead, eyed his prey in the bush and, swooping down, seized the bird out of the cage. The old catcher tried to stone the thief, but all his stones proved useless. As all chances of catching were now in vain, the old catcher made for home, and now I think he will know the Sparrow Hawk as an enemy.—Sent by ALBERT GILL (aged 15 years), 20, Drumgold Street, Douglas, Isle-of-Man.

Use our Picture Postcards.



All communications for this column should be written on one side of the paper only, duly authenticated with the name and address of the writer, not necessarily for publication, and sent to H. Neiman, Editor, "Wild Bird Life," "Eastcote," Alma Road, Carshalton, Surrey, by Monday in each week. Original observations and records invited.

May Notes.

The month of May has slipped past, and although the weather has been cold and wet, wild Nature has not stood still. The landscape shows all the glorious beauties of early summer, the meadows are thick with luxuriant grass, the rich colours of sorrel and buttercup enhancing the beauty of the sward. The hedgerows are white with the blossoms of the May, the scent from which on dull days is almost overpowering. As the blossom dies off the petals are scattered by the action of the birds, for just now almost every bush and tree has its feathered occupant.

We enter the wood, now thickly clothed with green. Bird music is heard on every side; the rollicking refrain of the Chaffinch, the sweet notes of the Linnet, and the love song of the Greenbird, come from the interlaced branches overhead; away at the other side of the wood the cheerful notes of the Song Thrush sound loud and clear. To-day the Thrush has been exceptionally musical. He commenced at peep of day, and scarcely rested until sundown. Yesterday he hardly sang a note; but the mellow pipe of the Blackbird was then heard continually, while to-day he is silent. It is certainly curious that these birds seldom sing together. We generally associate the Blackbird with fine weather and the Thrush as a prophet of wet; and yet yesterday and to-day the singing of the birds has been reversed. The Merle sang before the coming of the rain, and the Mavis has rattled off his joyous song so incessantly that we have hourly looked for a continuance of moisture. One may watch the ways of wild creatures all one's life, and yet fail to justify their doings with any degree of certainty.

Of all the woodland sounds, none are so soothing to the ear as the note of the Dove. It is not bird music such as we associate with singing birds; it is simply a long drawn out sound, and yet like the two-note song of the Cuckoo is as pleasant to listen to as the warble of a migrant or the trill of a Finch.

The number of the Hawks has been increased by the Kestrel, which at this time of the year is the most common species. It is a shade large than the Sparrow Hawk, with perpendicular spots or stripes on the underpart of the body. But one may easily distinguish him when on the wing. He is poised in the air on quivering wings with head to wind, so that his feathers are unruffled. The act of hovering is quite easy to a bird in such a position. Watch the Skylark, when he soars it is always head to the wind. Even in almost calm weather, when he rises in circles the segment made with the wind is greater than the one against it.

The Kestrel hovers in the same spot, his keen eye searching the ground immediately below him. Evidently he sees nothing to descend for. With a few beats of his long wings he moves some distance away, and repeats the performance. His flight is easy and graceful; when hovering his wings are outstretched, his tail and head point downwards, the former somewhat spread, which doubtless helps him to retain his position. By these movements we know we are watching the Windhover (one of his local names), for the Sparrow Hawk only occasionally acts in this manner, and then does not repeat it as the Kestrel does. The flight of the Sparrow

The Kestrel.

Hawk is strong and swift. With rapid, gliding actions, he threads his way through the wood, drops over the hedge beyond, picking off some luckless Warbler with scarcely a pause in his flight.

The food of the Kestrel consists principally of mice, beetles, cockchafers, etc., and no doubt this bird is a friend to the farmer, for small rodents seldom escape his sudden drop from the clouds. One cannot deny that occasionally some luckless bird forms the meal for a Windover, as a proof of which one has from time to time been caught in the nets of the bird catcher while attempting to carry off the decoy bird. However much we may regret the killing of a songster to provide a meal for a Hawk, each of us watch with pleasure the strong flight and easy wing power of any one of the family.

Notes and Queries.

Robin's Nest in a Cage.

A correspondent writes to the "North Wilts Herald," pointing out the curious nesting-place of a Robin at Highworth. In the fowls' house of a friend, he says, an old bird-cage is hung close to the entrance. Thither a Robin was noticed to fly the other day, and on closer examination it was found that a nest containing five eggs was in the cage.

The Overcrowding of Birds.

Many species of wild birds are undoubtedly increasing at an alarming rate; some have practically no enemies, and these are rapidly asserting their superiority in numbers. Unfortunately, as they increase, they are obliged to alter their mode of living to exist in competition with their fellows, and thus we find many one-time useful birds now becoming harmful and destructive; consequently, farmers, market gardeners, etc., are obliged to form clubs for mutual protection against the feathered host. One would like to suggest that eggs only be taken, for in this there must be far less cruelty than in the destruction of young birds.

The Shooting of Rooks.

The Rookery is visited in the month of May for the purpose of shooting the young Rooks of the year, so as to keep the birds within reasonable bounds. This is a form of sport looked forward to by many, and, although it may appear easy to stand under a tree and knock over a black object perched above one in the branches, such a feat is not so easily performed as one would imagine, especially when the weapon used is only a small rifle. Strange to say, it is alleged that the rookeries which are visited annually for the purpose of thinning the numbers of the occupants, thrive much better than those left entirely to themselves. Possibly it is a case of the survival of the fittest; the strong youngsters may manage to get away out of range.

Strange Nesting Place.

At this time of the year we frequently find birds nesting in apparently unsuitable positions. To the bird, any place is suitable where she is able to successfully hatch and rear her brood. Somehow, a Blackbird's nest on the axle of a cart, a Robin's on a shelf in the house, or a Tit's down a lamp post, appear to be places not only unsuitable, but outside our ideas of wild Nature's ways. The straggling woodbine, the tall hedgerow, or the sweet-scented hawthorn are the positions we love to see containing the beautiful homes of our wild birds, and in such they form the most charming pictures imaginable. One hopes that the habit of nesting in strange places will not become hereditary.

A Night Fisherman.

It is alleged that the Heron has the power of emitting a phosphorescent light when fishing at night, and so attracting the fish within reach. Of course, it is well known that light has an attracting influence upon wild creatures—birds, beasts and fishes have all been taken at night by means of artificial light. But it hardly seems possible for a naturally luminous light to be used by one living wild creature for the purpose of securing another during the hours of darkness, especially when we consider that a bird like the Heron is not entirely a night fisher. Personally, I must confess that I have never had the opportunity of testing the matter; but anyone possessing a tame Heron should be able to say if the breast feathers of the bird are at all phosphorescent.

NO RATS SEEN since using Danysz Virus six months ago; see testimonials; Single tubes, 2s. 6d.; three tubes, 5s. Post free from DANYSZ VIRUS, Ltd., Box 74, 52, Leadenhall-street, London, E.C. Harmless to other animals. No inconvenience from dead rats.

SALE OR EXCHANGE—continued.

CORONATION car for singing cock Canary, sell 8/-.—9, George-st., Brighton.

POWERFUL shocking coil, good as new, 12/6; or exchange four cock Goldfinches.—Hayward, 74, Church-st., Chard.

SPLENDID Italian mandoline and case, cost 45/-; exchange part cash and Canaries.—Barrow, 95, Green-st., Eastbourne.

HIGH-CLASS Show Homers, also Irish Terrier male puppy, exchange Canaries or Foreigners.—Felton, 29, Francis-st., Blackburn.

PAIR of white Java Doves, splendid birds, 6/-, or exchange for small Finches.—Johnson, 28, Durning-rd., Liverpool.

PHONOGRAPH and 20 records, exchange prize Persian female cat or kittens, or sell 30/-.—22, Tavistock-rd., West Jesmond, Newcastle-on-Tyne.

BRADBURY sewing machine, grand working order, for bike, extra cash for good one.—Harris, 9, Gopsall-st., Hoxton.

EXCHANGE Parrot cage for mealworms or British birds; approval.—J. Henney, 21, Jubilee-ter., near Hamsterley, Ebchester, Durham.

FOX Terrier Bitch, six months, clean, sharp, exchange Canaries, Norwich preferred.—Dartnall, 31, Somerville-rd., New Cross.

EXCHANGE lady's or gent's silver watch for two cocks or four hen Canaries; approval.—Marsden, 175, St. Phillip's-rd., Sheffield.

FOX Terrier dog pup, eight weeks, nicely marked, well bred, exchange Canaries, British, or Foreign, sell 7/6.—Yelf, Wells, Somerset.

EXCHANGE liver coloured Bedlington Terrier pup, five months, for Norwich Canaries, or sell £2.—John Smith, Front-st., Guidepost, Morpeth.

BLACK Tumbler cock, 10/-, Williement's strain, fit to win, exchange cage birds or Bantams; approval.—Samuel, 18, Dumfries-st., Aberdare

EXCHANGE grand pedigree smooth Fox Terrier dog, 1st prize winner, for breeding Canaries and cage.—Jones, 74, Manodroad, Blaenau, Festiniog.

EXCHANGE for British birds good bitch, broken gun, ferrets, quiet, retrieve to hand.—H. Brown, 40, Foss-bank, Lincoln.

HARMSWORTH'S Encyclopædia, 40 numbers, exchange for talking Parrot or Canaries.—H. Ridgway, 21, Bowling Old-lane, Bradford.

WIRE-HAIRED Fox Terrier and Whippet, nine months, make champion rabbiter, 10/-; approval; exchange.—Tebay, Town End, Sedbergh.

SHOW case for window, 3 ft. by 16 in., 8 in. deep, exchange Canaries.—Sewell, 16, Seldon-st., Colne, Lancs.

AVIARY, 40 by 22, loose front, also six golf balls, exchange anything useful.—Bowman, 3, Beechgrove-st., Glasgow.

SALE.—Hen Canary and beautiful Belgian Hare, doe, 5/- the two; or exchange cock Linnet Mule.—David Evans, Green-ter., Hendy, Pontardulais.

TEN cages, loose fronts, about 14 by 12 by 9, good condition; exchange for yellow Budgerigars.—95, Sharrow-st., Sheffield.

EXCHANGE Bulldog bitch, seven months, champion pedigree, birds, etc., value £2; sell 35/-.—Strachan, 1, Blackfriars-st., Aberdeen.

GRAMOPHONE and 12 records, cost £3; what offers, cash? Or exchange easy chairs, leather.—Boak, Gardens, Penrith.

PARROT cage, 30 in. high, exchange clap nets, Canaries, sell 6/-, anything useful.—Davis, Northern-cottages, Daybrook, Notts.

WHAT offers in Canaries, British or Foreign birds for black Rosecomb Bantams, four hens, cockerel?—Miles, Bird Specialist, Norwich.

FIELD glasses, fretwork goods, envelopes, writing paper, games, etc.; exchange for birds.—J. B., Institute, Whittington Moor, near Chesterfield.

EXCHANGE three breeding cages, four hen Canaries, and six British for sable Collie dog; or sell £1.—J. Myles, 5, Fergus-sq., Arbroath.

EXCHANGE six ivorine-handled knives or pair carvers for one cock or three hen Canaries.—Herbert Marsden, 175, St. Phillips-rd., Sheffield.

MAHOGANY aviary, 4 by 6 long, with about 20 birds, for sale; or exchange gent.'s 24 in. frame bicycle, in good condition.—Bond, 4, High-rd., Kilburn.

TEN breeding cages, complete, 18/-; champion pedigree Irish Terrier bitch, 15/-; bargain, full pedigree, particulars; exchange for good Yorkshires.—Coates, Hague-st., Whitfield, Glossop.

CRICKET goods, pocket hooks, pens, pencils, picture postcards, photo albums, dominoes, toys, exchange Canaries.—120, Sheffield-rd., Whittington Moor, near Chesterfield.

GENT'S cycle, new tyres, 60/-; 60-egg incubator, complete, 40 -; part cash and Norwich or Lancashire show Canaries.—Brooker, 15, Frome-ter., Dorchester.

LADY'S long waterproof coat, fit person 5 ft. 6 in., cost 35 -, sell 12 -, or exchange good Norwich cock, or pair Cockateels, or offers.—S. Turner, Wilsthorpe-rd., New Sawley, Derby.

TWO hand cameras (new), also a good Stradivarius violin, in case, and pair hollow-ground razors, in case, for sale; or exchange for Canaries.—Pryor, Hairdresser, King's Lynn.

KAMPRE safety razor, 3/6; three legged fishing stool, 2/9; Calton fountain pen, with filler, 3/-, all bargains; first postal orders have them.—Amos, Holyoake, Kibworth, Leicestershire.

FORTY parts Harmsworth Encyclopædia, cost 23/4, sell £1, or exchange young Parrot, or pairs yellow Budgerigars, offers.—Wyers, Ruskin-av., New Sawley, Derbyshire.

BROWN Linnets' eggs, 9d. nest; cock Canary, singing, 7/6; pair hand-reared Squirrels, 10/-; exchange Goldfinches, offers.—H. James, Kirton Lindsey, Lincoln.

DATED 1658.—Grandfather solid oak clock, Corinthian pillars, perfect preservation, guaranteed Greenwich timekeeper, 27/6, exchange.—Mann, Willington, Durham.

WANTED, Yorkshire breeding cock; exchange Cassell's "Familiar Wild Flowers," illustrated, perfect, unbound, cost 10/6.—20, Gatefield-rd., Sheffield.

EXCHANGE six breeding cages, with rack, five cold cages, and two night cages, value 30 -, for phonograph or gramophone, genuine.—W. Burrows, 4, Sunnyside-cottages, Norden, Rochdale.

HARMSWORTH Encyclopædia, complete, with covers, unbound, exchange for British birds, Canaries, and breeding cages, or sell 30 -, or nearest offer.—142, Dearnark-rd., Lowestoft.

PEDIGREE Fox Terrier, ten months, nicely marked, exchange Canaries, or sell £1, or nearest offer.—W. Thompson, 65, Balmoral-ter., Heaton, Newcastle-on-Tyne.

CLEARING six large single breeders, with appliances, 11 - Dt., 2 - each; fancy double breeder, with appliances, heavily moulded, beautiful front, four doors, 13 knobs, a masterpiece, 10/6; quantity of appliances, seed mill, sieve, bread grater, spray, mats, rape seed, four cages, drinkers, egg pots, nest boxes, etc., lot 7/6, bargain, field glasses (wild bird studying), case, strap, 10/6.—H. Amos, Holyoake, Kibworth, Leicestershire.

EXCHANGE lady's "Premier" cycle, sound condition, for four cock Goldfinches, sell 25/-; rubbish not offered or wanted.—Mr. J. Simper, 62, Meyrick-rd., Clapham Junction, London, S.W.

"GEM" phonograph, as new, five new records, £2 10/6, in perfect condition, sell, exchange two Roller cocks, no rubbish; approval.—Roose, Crier, Rhyl.

HOUSE moulted Goldfinch, 4/-; hen, yellow, Yorkshire, Norwich, 2/-; two box cages, 4d.; loose fronts, 1/6; brass hanging cage, 1/-; exchange.—Perrin, Garfield-st., Kettering.

LARGE Norwich cock and two hens, also hand-reared hen Bullfinch and cock Goldfinch, exchange garden roller or anything useful; letters only.—Robinson, 10, Ashley-rd., Hornsey Rise, N.

OLD English spangled Game Bantams, cockerel and pullet, from first and special winners, cash or exchange; Norwich, Yorkshire, or Crest hens wanted. Tallett, Jeweller, Pembroke Dock.

THREE hens, two Yorkshire, one Norwich, 3/6 each; one Crested cock, 7/6; harmonium, 15/-, maker, Hillier; two cock Mules, Siskin Mule, Greenfinch Mule, 7/6 each; will exchange chicks, Pigeons, or anything.—Long, 18, Prout-rd., Clapton.

A BARGAIN.—Pedigree Fox Terrier pup dog, six months, 15/-, by Seedhill Monarch, sent on approval; also a pair Norwich, Bishop's strain, large birds, or exchange for anything useful.—Lingard, 10, Haleywood, Burnley.

WHEELER-WILSON sewing machine, treadle, 30/-; exchange anything useful; three double breeding cages, joiner made, 12/-; or exchange 100 moleskins, cock Blackbird; what offers? All on approval.—Bush, Broom, Biggleswade, Beds.

TWO cocks and one hen Yorkshire Canaries, 25/- the three; pair house moulted Siskins, 8/6; cock Greenfinch and hen Bullfinch, 3/6 the pair, or 36/- the lot; exchange invited.—Dudley, 10, Stafford-rd., Oakengates.

EXCHANGE six ivorine handled knives and six nickel silver forks to match, also pair silver mounted carvers and six nickel silver teaspoons, approval, for two cocks or six hen Canaries.—Proprietress, Yeomanry Arms Hotel, Arundel-st., Sheffield.

FIVE pairs Canaries, perfect health and ready for second nest, also three new breeding cages, exchange cycle, phono, anything useful, must clear, sell 60/-, offers.—Goodey, 128, North-st., Halstead, Essex.

NATURAL HISTORY.

BIRD and Animal preserving done cheaply by practical hands, latest improvements.—F. Livermore, Windley, Derby.

TROPHIES of the Gun, Chase, and Rod truthfully set up.—M. F. Brookman, "Burnside," South Nutfield, Surrey.

BRITISH Birds' Eggs, Single and Clutches, with data. Price List, 1d. stamp.—Clarke, Naturalist, Scarborough.

ANTS' Nests (Formicaria), containing Queen Workers, Young, and Servants. Always interesting; no trouble. Price 5/6.—Houghton, 11, The Willows, Newcastle-av., Worksop.

PUPÆ, Swallowtail, scarce Swallowtail, Lime Hawk, 3½d.; Privet, Elephant, Eyed, 3d.; Spurge, Poplar, 2½d.; Pine, 4d.; Small Elephant, 6d.; Madder, 8d. each; postage 2d.—Head, Entomologist, Scarborough.

EGG Drills, Blowpipe, with instructions, 1/-; Egg Collectors' Guide and Calendar, 1/-; Larvæ Collectors' ditto, 1/-; Lepidoptera Collectors' ditto, 1/-; Gummed Label List for Eggs, 3d.; Mixed Pins, 6d.; Butterfly Nets, 1/3; Folding Nets, 3/-. Postage 3d.—Messrs. Davis, Naturalist' Apparatus Manufacturer, Dartford.

"CAGE BIRDS" GREAT

CANARY BREEDING COMPETITION.

A BOON TO THE FANCY.

£28 CASH IN PRIZES.

Two Sections: (1) NOVICES, (2) OLD HANDS.

1. Only Novice Breeders are eligible for the Novice Competition, a "Novice" to mean anyone who has never bred Canaries before.
2. The Prizes will be: **A**, Cup, value £5 (or Cash), First Prize; **B**, Cash, £3, Second Prize; **C**, Cash, £2, Third Prize; and **D**, Five £1 Cash Prizes for the next best in succession.
3. Prizes to go to the "most successful" breeders, meaning those of the competitors who are most successful in satisfactorily rearing the best average of healthy young birds during 1907. Canary breeding season now in progress.
4. The young Canaries must be bred by the competitors on or before July 15th, 1907, next. None bred after that date will be eligible.
5. All stock birds used must be the *bonâ fide* property of the Competitor.
6. Competitors must have the results of their breeding operations attested to by two responsible officials of any recognised Cage Bird Society, or may swear a declaration attested to by two responsible witnesses (form on application).
7. From now till the date of the **COMPETITION CLOSING AUG. 17,** each issue of CAGE BIRDS will contain a Coupon, and when sending in the declaration competitors must enclose the whole series of coupons to show that they have been during the period regular readers of CAGE BIRDS.
8. The Editor's decision shall be final.

FIVE POUNDS Cash, or Cup to full value, at winner's option, is offered for the most successful Canary breeder of any experience. All breeders of one season's experience and upwards eligible. Same conditions as for Novices. The Editor's decision to be final.

F. CARL, 154, FLEET STREET, LONDON, E.C.

FORMS NOW READY. PLEASE APPLY.

ALWAYS USE OUR

DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor for the *bona-fides* of either buyers or sellers. In all transactions the adoption of our Deposit System should be insisted upon.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient, plus the extra postage incurred, has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller, stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from *both* parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has *not* been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or, if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

PREPAID ADVERTISEMENTS

UNDISPLAYED.—Three Words a Penny up to eighteen words, MINIMUM Fourpence. One Halfpenny per Word for each word over eighteen.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and, after the first eighteen words, are charged at two words a penny, but no single advertisement, even if accompanied by others, will be charged at less than the minimum price, viz., Fourpence.

Headlines or Footlines 6d., 9d., 1/-, 1/6, according to size.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL. Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, Loudon. Terms for Display Advertisements on application.

SANDIFORD'S

FAMOUS

ROYAL RED.

A few Champion Yorkshiremens' opinion of Royal Red. All noted for having a Hot Colour last season.

FOR ALL CHAMPIONS OF NORWICH AND CINNAMONS

See last week's advertisement for testimonials and orders.

Mr. Mallinson and Son, Huddersfield. May 28th, 1907:—"Send us at once 2 cwt. Royal Red."—Mr. R. Halliday, Shipley. May, 1907:—"Send 28 lb. tin Royal Red at once; your samples are grand. It may interest you to know I have never used any other colour feed but yours, and I always use it as sent, adding nothing unless a pinch of cayenne."—Mr. Pickles, Shipley. May 20th, 1907:—"Send 1½ cwt. Royal Red."—Mr. H. W. Battye, Huddersfield, May, 1907:—"Send ¼ cwt. Royal Red, 14 lbs. hot."—Mr. J. C. Barnes, Sheffield, May, 1907:—"Send at once 112 lbs. Royal Red, 14 lbs. bot. At Sheffield Show I won silver challenge cup, special most points in show, 13 firsts, 9 seconds, 4 tbirds, 6 fourtbs, etc. The colour on my birds was bright and of good depth, and looked like balls of fire."—Mr. J. Wilcock, Eccleshill, May, 1907:—"I wish to congratulate you on your Royal Red. The birds we fed on it are of a deep and brilliant colour, and we won a great amount of prizes. I think it extra bot in quality and cheapness."—R. Sutcliffe and Sons, Shipley:—"Sir,—We received the cup we won for hottest bird, and we are well pleased with it. The birds we moulted on your feeds won the cinnamon marked competition more than any other exhibits. We are well satisfied with the colour."—Mr. Eckersley, Birmingham, June 1st., 1907:—"Send 10 lbs. Royal Red."—Mr. W. Collings, Devonport, May 30th, 1907:—"Send 18 lbs. Royal Red, 4 lbs. hot." Also Mr. Cuthbertson, A. Hirst, R. L. Crisp, Baker, Ambler, Cooper, Parnell and Son, Greaves, T. W. Nelson, Cowgill, and thousands more all used Sandiford's Royal Red last season. See last week's advertisement for all Norwich and Cinnamon champions orders. There is only one colour feed on this earth, viz., Royal Red. Send stamp for samples, lists of Spanish canary seed, egg mills, seed mills, syringes, show cages, in fact, everything; or see last week's advertisements. Established 1879.

THE HYGIENE OF BIRD KEEPING.

By W. GEO. CRESWELL, M.D., L.R.C.P., F.Z.S.

Price 1/1, post free from CAGE BIRDS Offices,

154, FLEET STREET, LONDON, E.C.

OPINIONS OF THE PRESS.

LANCET: "This little book will be welcomed by all lovers of birds, whether ornithologists, aviculturists, or the owners of a single pet songster. The author deals with his subject in a thoroughly practical and scientific manner, and the results of his experiments prove the fallacy of some rule-of-thumb theories. . . . The book is well illustrated."

COUNTRY LIFE: " . . . a surprising amount of really valuable advice for all who keep small birds, whether in cages or aviaries. . . . Those who approach the subject with an open mind must admit the cogency of the author's arguments; and these, backed by a very wide experience at first hand, will prove hard nuts to crack for many of the champions of the 'good old methods.' . . . We venture to think that his experience will pave the way for a revolution in the methods of bird keeping in the near future."

BEGINNERS: READ THE ANNUAL.

HARRY ALLEN.

Champion of all champions, 1st, 3rd, 4th, 9th, 10th in the Annual Contest, and 1st prize this week at Newtown. No wonder I win all before me, as I keep and send out nothing but the best that can be possibly got. Big fine well-pencilled cock Linnets, very tame, 2/6 and 3/- each; extra picked birds, sure mulers, 3/6 each; no rubbish. Remember Sergeant Smith's record. Cock Linnets, singing beautifully, in cage, with a packet of my special mixture, and instructions how to feed, 4/- the lot, real bargain. Young house moulted Linnets, singing hard and mad proud, finger tame, and every bird fit for show, 7/6, 8/6, and 10/6, including cage. I can recommend these birds to any gentleman, and defy any dealer to sell birds like them at the money. Young cock Canaries, 5/6 each, hens 3/- each. I have a real good contest bird for sale, will sing anywhere, and can win, price 15/6. Grand cock Bullfinch, sure muler, in show condition, singing hard, 5/-, honestly worth double. "69, Cardigan-terrace, Kirkstall. Sir,—The Linnet I purchased from you I am highly satisfied with. I paired him to a hen Canary, and she had four eggs, three fertile, one clear. I left him with her all through, and he did not attempt to meddle with the eggs; now she has hatched three grand young ones. He is still with her, and all are doing well. I could not wish for anything better. I shall recommend you to everyone I possibly can. Wishing you every success. —F. Child to H. Allen." If you want some birds to do you a bit of good, try one of mine and you will be delighted as others have been. Four packets of my special mixture, 1/-; seven days' approval, cash or deposit. Send to the original Linnet firm, and you will never regret it.—Harry Allen, 42, Brown Hill-cres., Harehills-lane, Leeds.

F. W. HEATON, Ash Cottage, NANTWICH, CHESHIRE. Champion Norwich.

Travelling Cages in all cases charged 3d. extra.

FOR ALL OTHERS, send for extended post free

CURRENT PRICE LIST.

Read a few more ungarnished facts:—

Important to Foreign Buyers.—"All Arrived in Excellent Condition."

Grenada, British W. I. May 11th, 1907.—I forward enclosed another order for hirds, as the last lot of 18 birds received from you arrived here in excellent condition, and everyone was so pleased with them that they insisted on me getting up another order.—Yours faithfully, ———.

Grand Food for Rearing Young Canaries.

Hothfield-place, near Ashford, Kent. May 28th, 1907.—Will you please send list. I find Eggertine a grand food for rearing young Canaries.—T. Machin to W. Rudd.

Trepafod, Rhondda Valley. May 28th, 1907.—Received bird quite safe, quite satisfied. Will send again when I require anything.—J. M. Lewis to W. Rudd.

22, Hope-street, Glasgow. May 27th, 1907.—I heg to say I received the hirds all right. I am greatly pleased with them. The cock is singing splendid, and the hen is a lovely bird. Thanks for quick despatch.—J. Hair to W. Rudd.

Galashiels, June 1st, 1907.—Cage arrived all safe. Delighted.—J. D. to W. Rudd.

George-street, Barnton. May 31st, 1907.—I received cage all right, and am very pleased with it. I consider it a first-class cage, and is something like a hreeding cage.—A. Stanistreet to W. Rudd.

8, Victoria-road, Bude. June 1st, 1907.—I heg to acknowledge receipt of Sib hen, in grand trim after the long journey. I thank you for prompt despatch, as I only wrote you on Thursday and received it on Saturday.—G. Cable to W. Rudd.

Would Not Take Double the Money they Cost.

Post Office, Gwalchine, Anglesey. May 30th, 1907.—Please send ———. The pair of Yorkshires are coming on beautifully. They have four young ones. The cock is singing from morning till night. I am very pleased with my bargain, and would not take double the money I gave for them.—W. Jones to W. Rudd.

Best Ever Had.

80, Menarch-terrace, Gateshead-on-Tyne. May 30th, 1907.—I take the pleasure of writing to say how satisfied I am with the hird you sent. He sings the whole day through.—Wm. Murray to W. Rudd.

Victoria House, Low Fell. May 29th, 1907.—Pair of Yorkshires arrived safe, and have started to build to-day. I am highly pleased with same, and they are just what I wanted.—J. E. Atkinson to W. Rudd.

Surprised at Value You Give for the Money.

Hillside, Elstree, Herts. June 1st, 1907.—Received hirds quite safe. Am very pleased indeed, and am surprised at the value you give for the money.—S. Squires to W. Rudd.

Note the Difference between Reliable Birds and the Tried and Useless Ones, etc.

5, Charles-st., Jarrow-on-Tyne. May 31st, 1907.—The three hens I ordered off you arrived all right, and in first-class condition. I have only had them a fortnight, and I have two of them already sitting on four eggs each, while the other one has three up to the time of writing. A friend of mine has asked me to send him a hen. I enclose amount.—M Harris to W. Rudd.

Alisa, Albert-road, Hendon. June 1st, 1907.—I am pleased to say the hird arrived quite safe. We are delighted with it. It arrived at 5 p.m., and was whistling beautifully at 5.30.—E. A. Swain to W. Rudd.

"EGGERTINE."

It is the hest, purest, and greatest bone and muscle forming food ever known, as the analytical reports of most eminent authorities prove. It will hring hens into sound and robust condition for hreeding as nothing else will. This during the past twenty years has been proved by thousands. It is a genuine egg food made with fresh laid English eggs, with white, of course, included (and NOT foreign preserved yolk of egg) with other valuable properties combined. Tins, post free, 1s. 3d.; large size, 2s. 6d. There is a saving in the larger size. The sale this season is phenomenal; never before has it been near so great, and this owing to its merit and merit alone.

"ASTHMARINE."

This remedy has the largest sale of any similar article by far. Beware of imitations! For all lung affections it is marvellously efficacious—not a liver burner, but both soothing and healing, 9d. and 2s. 6d. per bottle, post free. Once used, always kept ready for any sudden attack.

After the stress of the Show Season your birds naturally require a pick-me-up. There is nothing in the Bird World that can compare with RUDD'S

CELEBRATED TONIC DROPS,

The Most Invigorating Preparation on the Market.

W. RUDD,

THE Bird Specialist,

NORWICH.

Telegrams—"CANARIES, NORWICH."
